# SHARP SERVICE MANUAL

CODE: 00ZAR700//F1E

DIGITAL LASER COPIER/PRINTER
DIGITAL MULTIFUNCTIONAL SYSTEM

AR-M550N/M550U
AR-M620N/M620U
MODEL # AR-M700N/M700U

CONTENTS

Parts marked with "⚠" are important for maintaining the safety of the set. Be sure to replace these parts with specified ones for maintaining the safety and performance of the set.

SHARP CORPORATION

CONTENTS

[1] OUTLINE

1. Main Features

(1) Single Pass Duplex Scanner
- Max. 76 cpm for duplex scanning
- Best-in-class 150-sheet feeder

(2) Security Solution
Data encryption + data clear with random number
- Network security

(3) New Toner
- Higher density/Finer particles

(4) Inner Output
- Separate copy output pages from printer output pages

(5) Enhance the solutions such as document filing and other features.

(6) Design for High Reliability
- Robust frame designed by highly accurate CAE analysis

(7) Improved Performance
- Network Tandem Copy/Print
- High-speed Processor
- New high-speed ASIC

(8) Fax feature
For replacement of mid/low speed devices (up to area)

(9) Large Capacity Finisher
Finisher capacity: 4,000-sheet

2. Features

A. High reliability

(1) Improved Image Quality/Paper Transport

Full-Grip Path Design
Stable paper feeding realized by rollers that firmly grip paper

Small-Diameter Belt Transfer System
With reduced effect to paper types, drum paper release is stabilized and transfer efficiency is improved

Easier Paper Jam Fixation with Open Paper Path
Jammed paper on vertical paper path can be easily removed by opening the left side cover, which shortens time to fix paper jam
(2) Strengthened Frame Structure

Highly Rigid Frame
Improved stability with less machine distortion, and both rigidity and lightweight been achieved.

(3) Energy Saving with Unique External Heat Roller Fusing System

Newly Developed External Heating System
1) High reliability with stabilized fusing ability
2) Shortened warm up time before start copying
3) Achievement of energy efficiency that clears 2006 Rationalization in Energy Use Law

External Heat Roller Fusing System

Thin Steel Fusing Roller

Low Heat Capacity Rubber Roller

High Efficiency Heater

External Heating Roller
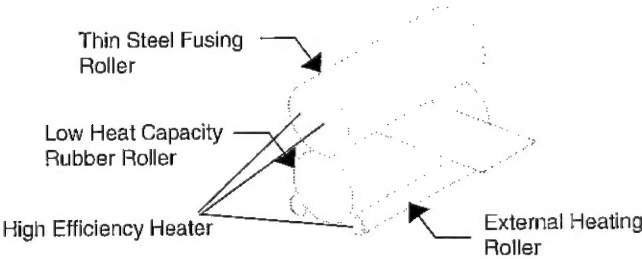

B. Network tandem
With Network tandem function, users can output one job on two network connected engines. Productivity of large-volume copying/printing can be dramatically improved by high-speed output of up to 110cpm (55cpm model), 124cpm (62cpm model) and 140cpm (70cpm model)

Copy

Scan original from document glass or DSPF

Send print data from PC
Print

NOTE: Users can use the function simply by connecting the engines to network. This means no Tandem Kit (Connection cable) necessary.
For N model, only optional Printer Expansion Kit is required.

C. 2-Way Security Solution

ONLY-ONE

Print data

Way-in : Network Security
Allow access of authorized network address only
and prevent unauthorized access from outside.
(Filtering of network address)

Copy data *Print data*

Scan data *Fax data*

Way-out : HDD Data Clear + Encryption
Data clear by plural writing random number.
Cannot be analyzed even when peeped by encryption.
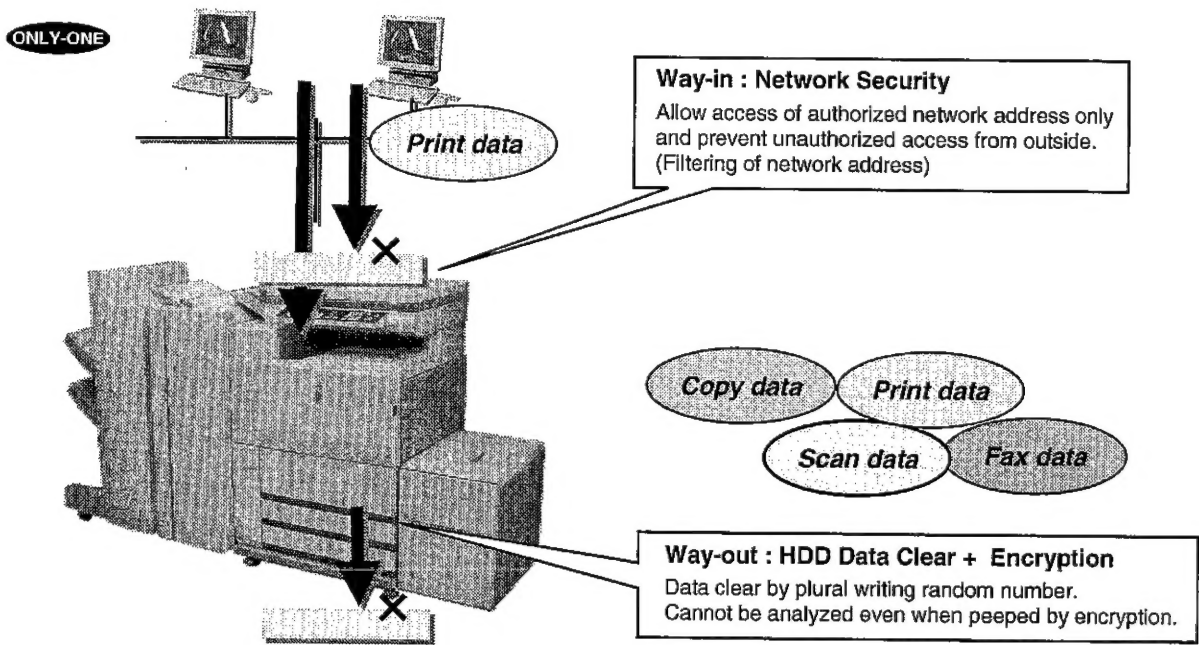

(1) Data Security coexisting with Document Filing

Data Security

Document Filing/Quick File
• Original data
• Print data
• Fax data
HDD memory
Store
Raw/compressed data

Install DSK

Document Filing/Quick File
• Original data
• Print data
• Fax data
Encrypt before storing
HDD memory
Encrypted data

• PIN printing
• Password input
Recall (Job settings)

• PIN printing
• Password input
Recall (Job settings)

Security is assured by encrypting the data to be stored!

D. Document Filing

Document filing is a function that enables users to share and reuse data stored in the engine's HDD by digitalizing various information sent/scanned from printer, fax, PC or MFP that are connected by network.

<Document Filing initial screen>

<List of data stored in Main folder>
PC-Fax is like printing Word data etc. onto fax paper.
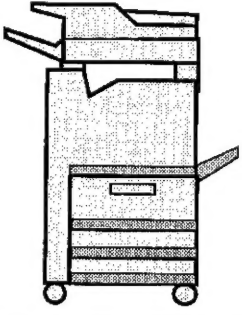

[2] CONFIGURATION
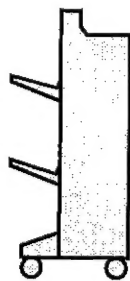

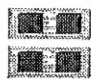

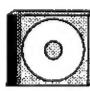

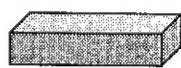

1. Main unit and option lineup

(1) Main unit lineup

Model name	Composition
⚠ AR-M550U/M620U/M700U	Copier model
AR-M550N/M620N/M700N	Network printer model

(2) Option lineup

AR-LC6/Large capacity tray	AR-F15/Finisher	AR-F16/Saddle stitch finisher
AR-CF2/Inserter	AR-PN2A/B/C/D / Punch unit	⚠ NIC (Boot/PCL, PS) SOFT KEY AR-P19/Printer expansion kit
SOFT KEY AR-PK5/PS3 expansion kit	SOFT KEY AR-PF1/Barcode font kit	⚠ (Boot/PCL, PS) SOFT KEY AR-FR11/Data security kit
SOFT KEY AR-NS3/Network scanner expansion kit	Up to country Fax BOX AR-FX8/ Facsimile expansion kit*1	AR-MM9/FAX expansion memory(8MB)*1
AR-U11M/Sharpdesk 1 license kit AR-U15, AR-U15M/Sharp desk 5 license kit AR-U1AM/Sharpdesk 50 license kit AR-U1BM/Sharp desk 100 license kit		

⚠ *1: North America, Europe, Australia, New Zealand, Singapore, Taiwan

(3) Option combinations

STD:Standard provision, ○:Installable, ×:Not installable

Section	Option	Machine model		Remarks
		Copier model	Network printer	
	Item	AR-M550U/ M620U/M700U	AR-M550N/ M620N/M700N	
Paper feed system	Large capacity tray (AR-LC6)	○	○	
Paper exit system	Finisher (AR-F15)	○	○	
	Saddle stitch finisher (AR-F16)	○	○	
	Inserter (AR-CF2)	○	○	
	Punch unit (AR-PN4A/4B/4C/4D)	○	○	For finisher and saddle stitch finisher
Electrical system (Printer controller)	Printer expansion kit (AR-P19)	○	STD	For installation to the AR-M550U/M620U/M700U, the printer expansion kit, AR-P19, is required.
	PS3 expansion kit (AR-PK5)	○	○	
	Barcode font kit (AR-PF1)	○	○	
Software	Data security kit (Not acknowledged version) (AR-FR11)	○	○	
	Network scanner expansion kit (AR-NS3)	○	○	
	Sharp desk 1 license kit (AR-U11M)	○	○	
	Sharp desk 5 license kit (AR-U15M)	○	○	
	Sharpdesk 50 license kit (AR-U1AM)	○	○	
	Sharpdesk 100 license kit (AR-U1BM)	○	○	
FAX system	Facsimile expansion kit (AR-FX8)	○	○	
	FAX expansion memory (8MB) (AR-MM9)	○	○	

2. Block diagram
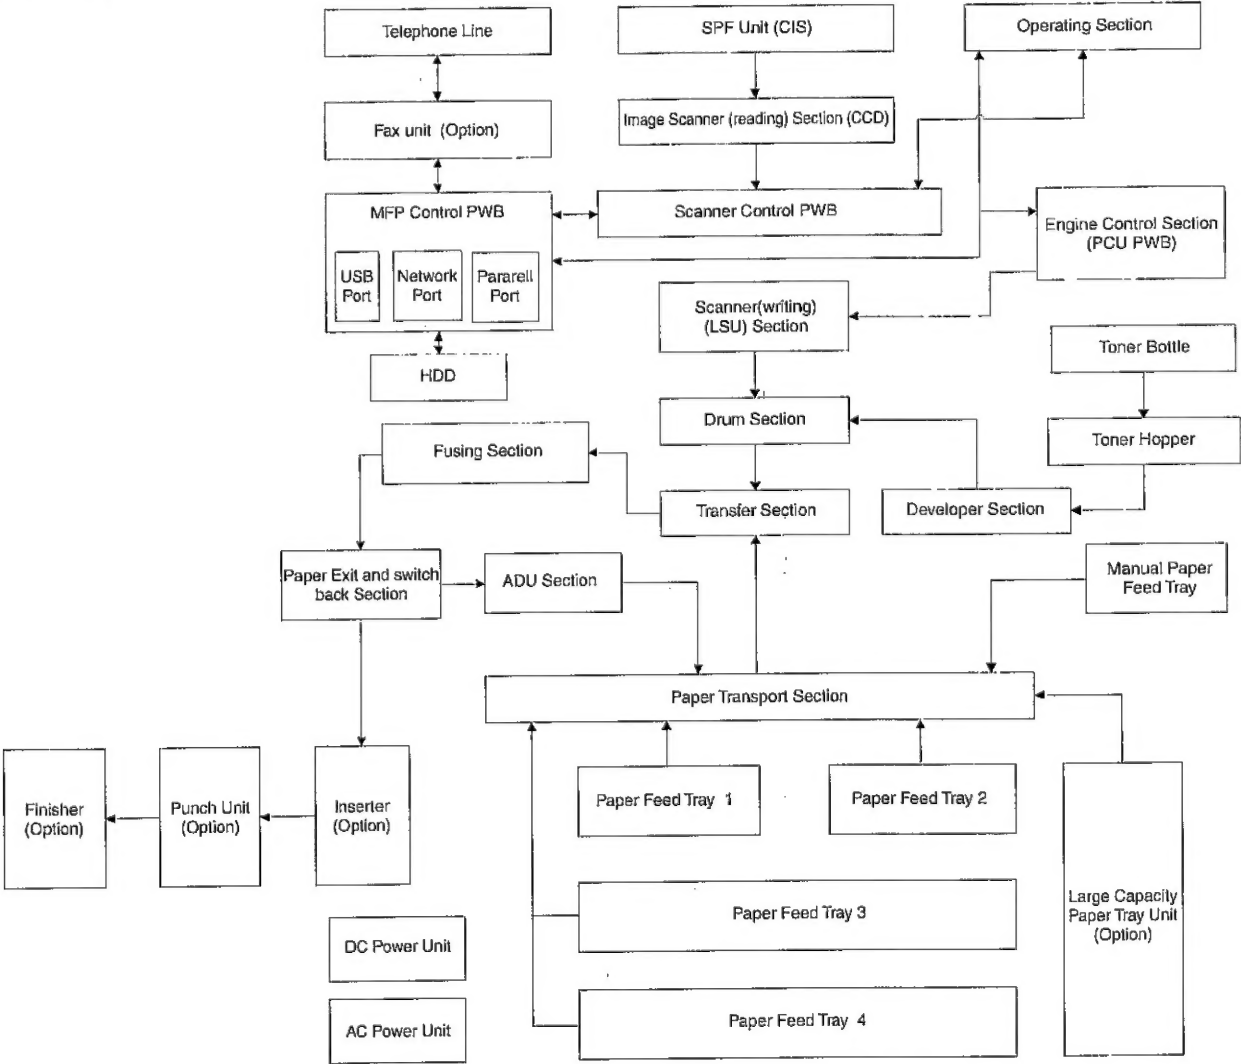

[3] SPECIFICATIONS

1. Basic specifications

A. Main unit

(1) Type

Type	Console
Clip tray	Provided

Operation mode	Format
Copy mode	Monochrome digital (Electronic photo graphic)

(2) Target users

Mode	Model	Volume of usage	
Copy mode	AR-M550N/ M550U	Scope	~ 250,000 pages/month
		Average copy volume	~ 40,000 pages/month
	AR-M620N/ M620U	Scope	~ 300,000 pages/month
		Average copy volume	~ 40,000 pages/month
	AR-M700N/ M700U	Scope	~ 300,000 pages/month
		Average copy volume	~ 50,000 pages/month

(3) Engine speed

Paper size	AR-M550N/ M550U	AR-M620N/ M620U	AR-M700N/ M700U
A4, 8.5x11	55ppm	62ppm	70ppm
A4R, 8.5x11R	40ppm	45ppm	48ppm
A5R/5.5x8.5R, Invoice-R	40ppm	45ppm	48ppm
B5	55ppm	62ppm	70ppm
B5R, Executive-R	40ppm	45ppm	48ppm
B4/8.5x14	35ppm	39ppm	45ppm
A3/11x17	30ppm	34ppm	39ppm
Extra	30ppm	34ppm	39ppm
Postcard	Since the next paper is fed after completion of paper exit outside the machine, it depends on the machine composition.		

(4) External dimensions (W x D x H)

Packaged	–
Main unit	728 x 679 x 1050mm (Height: Floor – Glass surface) 728 x 679 x 1192mm (Height: Floor – SPF top)
When an option is installed (Machine occupying area)	
Main unit + LCC installed	1347 x 679 x 1192mm
Main unit + Saddle finisher/ Saddle finisher installed	1794 x 679 x 1192mm
Main unit + LCC + Finisher/ Saddle finisher installed	1887 x 679 x 1192mm
Main unit + Inserter + Finisher/ Saddle finisher	2079 x 679 x 1192mm
Main unit + LCC + Inserter + Finisher/ Saddle finisher installed	2156 x 679 x 1192mm

(5) Weight

AR-M550N/M620N/M700N	Packaged	About 212 Kg
	Main unit	185 Kg
AR-M550U/M620U/M700U	Packaged	About 214 Kg
	Main unit	185 Kg

(6) Languages supported

Key sheet language support	Japanese, English (America English/UK English), German, French, Spanish, Italian, Dutch, Swedish, Norwegian, Finnish, Danish, Czech, Polish, Hungarian, Greek, Chinese

(7) Internal auditor

System	Key operation system
No. of departments	500

(8) Operation panel

Type	Dot matrix LCD (640 x 240dots)	
Operating procedure	Touch-panel input	
LCD drive display area	153.5 × 57.5mm	
LCD backlight	Fluorescent lamp backlight system	
LCD brightness adjustment	Provided	
Character used in LCD	Type	Sharp/Fujitsu font
	Dot	Kanji: 16 x 16dots, Alphabet and numeral: 8 x 16dots, 16 x 16dots
	Bold text display	○ (Mixed used in a same area or a same sentence is inhibited.)

(9) Controller board

CPU	RM7065 (64bit RISC CPU, 525 MHz)
Interface	
IEEE1284 Parallel	1 port (* For printer/servicing)
Ethernet	1 port*
USB2.0	1 port (* For printer/servicing)
Expansion port	PCI slot 1 slot
Memory	128MB (onboard)
Memory expansion slot	1 slot (168pin SDRAM DIMM compatible) 64MB/ 128MB/256MB expandable

▲ *: Standard for the AR-M550N/M620N/M700N. The Printer expansion kit AR-P19 is required for the AR-M550U/M620U/M700U.

(10) Hard disk

Hard disk capacity	40GB
Hard disk storage quantity	60000 sheets

(11) Power source

a. Dehumidifier functionality (Option)

Section	Paper conveyor section/Scanner section

b. Operating voltage/power consumption

Power supply voltage/frequency		Power consumption
		With full options
		Max.
100V (Japan)	50/60Hz	1450
Other countries in 100V system	50/60Hz	1800
Other countries in 200V system	50/60Hz	1840

2. Engine specifications

A. Paper feeding, paper conveyance, and discharge section

(1) Paper feeding performance

Type	4-stage paper feed tray (Parallel LCC + 2 tray + Multi manual paper feed)	
Paper feed method	Paper is fed from the above by the front loading system.	
Dehumidification heater	Japan	Standard
	Except for Japan	Option

- Tray 1 (Left tray in the parallel LCC)

Paper size (set by software)	Paper size change method	Paper type setting	Paper size setting when shipping	Allowable paper type and weight for paper feed	Paper capacity (Standard paper)	Paper type	Paper remaining detection	Tray lift time	
A4, 8.5" x 11"	Size setting by user	YES	Japan: A4 Inch Series: 8.5" x 11" AB Series: A4 (16K is not supported.)	Normal paper: 60 – 105g/m² (16 – 28lbs)	Japan: 900 sheets (64g/m²) Except for Japan: 800 sheets (80g/m²)	Normal paper, printed paper, recycled, letterhead, punched paper, color paper	Enable (Paper empty and 3 steps)	Up	Within 12sec *1
								Down	Free fall

*1: Time required from tray insertion to empty detection when paper is empty.

- Tray 2 (Right tray in the parallel LCC)

Paper size (set by software)	Paper size change method	Paper type setting	Paper size setting when shipping	Allowable paper type and weight for paper feed	Paper capacity (Standard paper)	Paper type	Paper remaining detection	Tray lift time	
Japan: A4, B5, 8.5" x 11" AB series (Europe, SCA): A4, 8.5" x 11" AB series (Other): A4, B5, 8.5" x 11" Inch Series: 8.5" x 11", A4	Size setting by serviceman (B5 available through bolt fixing and setting by serviceman)	YES	Japan: B5 Inch Series: 8.5" x 11" AB Series: A4 (16K is not supported.)	Normal paper: 60 – 105g/m² (16 – 28lbs)	Japan: 1300 sheets (64g/m²) Except for Japan: 1200 sheets (80g/m²)	Normal paper, printed paper, recycled, letterhead, punched paper, color paper	Enable (Paper empty and 3 steps)	Up	Within 12sec *1
								Down	Free fall

*1: Time required from tray insertion to empty detection when paper is empty.

- Tray 3 (Multi-purpose tray)

Paper size	Paper size change method	Paper type setting	Paper size setting when shipping	Allowable paper type and weight for paper feed	Paper capacity (Standard paper)		Paper type	Document detection		Paper remaining detection
A3, B4, A4, A4R, B5, B5R, A5R, 8K, 16K, 16KR 11 x 17, 8.5 x 14, 8.5 x 13, 8.5 x 11, 8.5 x 11R, 7.25 x 10.5R, 5.5 x 8.5R, Special size (Tab paper is of A4; limited to tab width 12mm – 20mm/8.5 x 11; tab width 6.1mm – 17mm.)	Guide adjustment by user	YES	Shipped with the paper guide width at Max.	Normal paper: 60 – 105g/m² (16 – 28 lbs) Thick paper: 106 – 128g/m² (29 – 34 lbs) 205g/m² (110 lbs) 176g/m² (65 lbs) OHP, label sheet, tab paper *1, *2	Standard paper	Japan: 550 sheets (64g/m²) Except for Japan: 500 sheets (80g/m²)	Normal paper, printed paper, recycled, letterhead, punched paper, color paper, thick paper, label sheet, OHP, tab paper	Automatic detection Auto-AB	A3, B4, A4, A4R, B5, B5R, 8.5 x 13	Enable (Paper empty and 3 steps)
					OHP	40 sheets		Automatic detection Auto-inch	11 x 17, 8.5 x 14, 8.5 x 11, 8.5 x 11R, 7.25 x 10.5R	
					Tab paper	Enable		For 8K, 16K, and 16KR, setting is made manually.		
								Detection disregard setting	Enable	

*1: For 105g/m² or above, A4/8.5 x 11 or less. For 128g/m² or above, horizontal feed only.

*2: For multi copy and back surface copy, single feed only.

- Tray 4 (500-sheet paper feed tray)

Paper size	Paper size change method	Paper type setting	Paper size setting when shipping	Allowable paper type and weight for paper feed	Paper capacity (Standard paper)	Paper type	Document detection		Paper remaining detection
A3, B4, A4, A4R, B5, B5R, 8K, 16K, 16KR 11 x 17, 8.5 x 14, 8.5 x 13, 8.5 x 11, 8.5 x 11R, 7.25 x 10.5R	Guide adjustment by user	YES	Shipped with the paper guide width at Max.	Normal paper: 60 – 105g/m² (16 – 28 lbs) *1, *2 Thick paper: 106 – 128g/m² (29 – 34 lbs) 205g/m² (110 lbs) 176g/m² (651 lbs)	Japan: 550 sheets (64g/m²) Except for Japan: 500 sheets (80g/m²)	Normal paper, printed paper, recycled, letterhead, punched paper, color paper, thick paper	Automatic detection Auto-AB	A3, B4, A4, A4R, B5, B5R, 8.5x13	Enable (Paper empty and 3 steps)
							Automatic detection Auto-inch	11 x 17, 8.5 x 14, 8.5 x 11, 8.5 x 11R, 7.25 x 10.5R	
							For 8K, 16K, and 16KR, setting is made manually.		

*1: For 105g/m² or above, A4/8.5 x 11 or less. For 128g/m² or above, horizontal feed only.

*2: For multi copy and back surface copy, single feed only.

- Manual paper feed

Paper size	Paper type setting	Allowable paper type and weight for paper feed	Paper capacity (Standard paper)	Paper type	Document detection		Paper empty detection
A3, B4, A4, A4R, B5, B5R, A5R, 8K, 16K, 16KR, Postcard 11×17, 8.5×14, 8.5×13, 8.5×11, 8.5×11R, 7.25×10.5R, 5.5×8.5R	YES	Thin paper: 52 – 59g/m² (14 – 15lbs) (Tab paper in single feed) Normal paper: 60 – 105g/m² (16 – 28 lbs) Thick paper: 106 – 128g/m² (29 – 34 lbs), 176g/m² (65 lbs) cover 205g/m² (110 lbs) Index OHP, postcard, label sheet, tab paper*1, *2	Plain paper: 100 sheets (80g/m²) Postcard: 20 sheets OHP: 20 sheets	Normal paper, recycled paper, printed paper, punched paper, color paper, letterhead, back paper, label paper, thick paper, OHP, tab paper (tab width 20mm or less)	Automatic detection Auto-AB	A3, B4, A4, A4R, B5, B5R, Postcard, A5R	YES
					Automatic detection Auto-inch	11×17, 8.5×14, 8.5×13, 8.5×11, 8.5×11R, 7.25×10.5R, 5.5×8.5R	
					Detection of 8K and 16K in the manual paper feed tray is not performed.		

*1: For paper exceeding 105g/m², A4/8.5 x 11 or smaller. For paper exceeding 128g/m², horizontal feed only.

*2: Multi-back surface copy is enable only in single feed.

- Duplex

System	Non stack system
Paper size	A3, B4, A4, A4R, B5, B5R, A5R, 8K, 16K, 16KR, 11 x 17, 8.5 x 14, 8.5 x 13, 8.5 x 11, 8.5 x 11R, 8.5 x 5.5R
Type and weight of paper which can be passed	Plain paper: 60 – 105g/m² (16 – 28lbs) Thick paper: 106 – 128g/m² (29 – 34 lbs), 176g/m² (65 lbs cover) 205g/m² (110 lbs) Index

(2) Finishing performance

Paper exit position / system	Main unit top surface face-down paper exit
Paper exit capacity	250 sheets (80g/m² paper)
Paper exit paper size/ kind	All kinds of paper which can be fed
Remaining paper detection	None
Paper exit paper full detection	Provided

B. Scanner section (read)

(1) Type

Document table mode / SPF (front side) mode	
Scanning method	By the CCD image sensor.

SPF (back side) mode	
Scanning method	By the CIS image sensor

(2) Original standard position, scanning size, and scanning area

a. Original standard position

Document table	Left bottom reference
SPF	Center reference

b. Scanning size

Max. original size	AB Series	A3
	Inch Series	11 x 17

(3) Resolution

Scan resolution (dpi)	Copy mode			
	Platen			
	Magnification ratio	25 – 99	Normal ratio	101 – 171	172 – 400
		600 × 600	600 × 600	600 × 600	600 × (600 × 2)
	SPF			
	Magnification ratio	25 – 99	Normal ratio	101 – 117	118 – 200
	When in single copy	600 × 367	600 × 367	600 × 367	600 × 600
	When in duplex copy (front) CCD	600 × 600	600 × 600	600 × (600 × 2)	600 × (600 × 2)
	When in duplex copy (back) CIS	600 × 300	600 × 300	600 × 600	600 × 600

Input and send resolution (dpi)	When in the Fax send mode and the scanner FAX broadcast mode					
	Select mode	Standard	Fine text	Super fine test	Ultra fine text	600dpi send *
	Input resolution: OC	600 × 600	600 × 600	600 × 600	600 × 600	
	Input resolution: SPF simplex	600 × 367	600 × 367	600 × 367	600 × 367

	Input resolution: SPF duplex (front) CCD	600 × 600	600 × 600	600 × 600	600 × 600
	Input resolution: SPF duplex (back) CIS	600 × 300	600 × 300	600 × 300	600 × 300
	Communication resolution	200 × 200	300 × 300	400 × 400	600 × 600

(4) Gradation

Input	Output
256 gradations (8bit)	2 gradations (1bit)

(5) Scanning speed

	Scans per minute
DSPF	65 surfaces (single) 76 surfaces (duplex)

(6) Light source

Type	None-electrode xenon lamp (Front), LED (Back)

(7) Scanning sensor

Type	Monochrome CCD

C. Scanner section (write)

(1) Type

Scan system	Laser scanning

(2) Laser unit specifications

Rotation speed	34000 rpm (AR-M550N/U, AR-M620N/U) 40000 rpm (AR-M700N/U)
Mirror surfaces	14 surfaces
Laser power	0.385±0.04 mW (AR-M550N/U, AR-M620N/U) 0.480±0.04 mW (AR-M700N/U)
Laser beam size	Main scan: 60 – 85 mm, sub scan: 75 – 110 mm
Laser wavelength	770 – 795 nm
Scan width (sub scan direction)	AB series: 420 mm Inch series: 432mm

(3) Resolution

Main scanning direction	Sub scanning direction
600dpi	600dpi

(4) Gradation

2 gradations (1bit)

D. Image processing section

(1) Imaging speed

335 mm/sec (AR-M550N/U, AR-M620N/U) 395 mm/sec (AR-M700N/U)

(2) Photosensitive drum

Type	OPC φ80mm
Life	55ppm: 250K, 62/70ppm: 300K

(3) Toner

Capacity	1430/1650g (Other countries), 1275g (Japan)

(4) Developer

Capacity	725g x 2 (2 bags are used.)
Life	55ppm: 250K, 62/70ppm: 300K

(5) Charging

Type	Corotron
Voltage	–590V±2V

(6) Exposure

System	Exposure from laser diode

(7) Developing system

System	Dry, 2-component magnetic brush development
Voltage	–500V±5V (Developing mode) +150V (Cleaning mode)

(8) Transfer

System	Static electricity transfer (transfer belt method)
Transfer section	35μA (AR-M550N/U, AR-M620N/U) 40μA (AR-M700N/U) Cleaning mode (AC 4.5kV, DC –100V)

(9) Paper separation system

System	Curvature separation + Separation pawl

(10) Discharging

System	Discharging lamp method

(11) Cleaning

System	Counter blade system

(12) Waste toner collector capacity

Capacity	40% of toner capacity

E. Fuser section

(1) Type

System	Heat roller attachment system

(2) Fuser temperature

(Unit: °C)

Mode			Control temperature			
			Fusing roller		Auxiliary heat roller	
			Inch (U.S.A., Canada)	AB_B (Europe, U.K.) AB_A (Australia)	Inch (U.S.A., Canada)	AB_B (Europe, U.K.) AB_A (Australia)
Copy/Print mode	Normal mode control temperature	Heat roller	200	205	200	205
	Normal mode control temperature	Sub heat roller	200	205	200	205
	Thick paper mode control temperature	Heat roller	200	205	200	205
	Thick paper mode control temperature	Sub heat roller	200	205	200	205
Pre-heat mode	Energy saving mode control temperature	Heat roller	170	170	170	170
	Control temperature in the energy save mode	Sub heat roller	170	170	170	170

(4) Heat roller

Type	Teflon lined
Life	300K

(5) Pressure roller

Type	Silicone rubber roller
Life	300K

(6) Method

Forced release by releasing tabs

F. Drive section

Drive section	Motor name	Motor type
Image scanner	Scanner motor	Stepping motor
Developing system	Developing motor	DC brush-less motor
Paper feed and conveyance	Paper feed motor	DC brush-less motor
Transfer, OPC drum	OPC drum motor	DC brush-less motor
Fusing	Fusing motor	DC brush-less motor

3. Operating specifications

A. Common operations

(1) Warm-up, jam recovery time, low power mode, sleep mode

a. Warm-up time (ambient temp. of 20°C)

After turned on	Max. 120 seconds
Reset time from preheat mode	Within 30 seconds

b. Jam recovery time

Jam recovery time	Within approx. 30 sec (Condition: door open/ fusing unit pull-out, after leaving for 60sec, standard condition, polygon stop)
	Under 30 seconds (conditions: door open)

c. Low power mode, sleep mode

⚠

		AR-M550N/U	AR-M620N/U	AR-M700N/U
Low power consumption mode	S/U model*1	216.75W	243.7W	274.5W
	M/N model*2	261.75W	288.7W	319.5W
Reset time from low power mode		30sec		
Power consumption in the sleep mode	S/U model*1	20W or less		
	M/N model*2	95W or less		
Shift time to sleep mode		90 min (Max. 240 min)		

*1: Calculation formula: 3.85 x ipm + 5W

*2: Calculation formula: 3.85 x ipm + 50W

(ipm: input page per minute)

(2) Size sensing summary

Yes: detection; yes

USER: by USER setting

USER 1: USER SETTING 1 (INCH series)

USER 2: USER SETTING 2 (AB series)

SVC: By serviceman setting

No: detection; no (engine performs as extra mode)

N/A: Not applicable

PRT Key OP: by printer key operator program

T/C: Simulation setting(by Serviceman)

The size detection- off mode will be added in printer key operator program. Refer to Front panel spec.

NOTE: Engine can make void area by force. Because when real paper size is smaller than the detected size, engine can stop laser shot to prevent machine damage that causes from created drum image which is out of paper.

(5) Image rotation in staple mode

Staple mode by Finisher/Saddle stitch finisher need 180 degrees image rotation.

Because by mechanical reasons, paper edge which to be stapled cannot be changed.

Finisher	Mode	Image rotation
Finisher/Saddle stitch finisher	Non-staple	180°C
	Staple	180°C

B. Copy mode

(1) Document size

Scan mode	Paper type	Location	Dimensions		Paper size		Paper size	Note

Mix paper feed (Same series, same width paper) enabled								

(2) Paper size

Paper type	Dimensions		Paper size		Paper size	Note
	Min.	Max.	Min.	Max.		
AB Series	—	—	A6 (A6R) Postcard	A3	A3, B4, A4, A4R, B5, B5R, A5R, 8K, 16K, 16KR, Postcard	
Inch Series	—	—	8.5 x 5.5	11 x 17	11×17, 8.5×14, 8.5×13, 8.5×11, 8.5×11R, 7.25×10.5R, 5.5×8.5R	

(3) Exposure

a. Density/copy image quality process

Exposure speed	Binary: Text (Auto/Manual), Text/Photo, Photo
Number of manual steps	9 steps
Toner save mode	YES

b. Resolution

- Scanning

Main scanning direction	Sub scanning direction
Basic resolution	Basic resolution
600dpi	600dpi

- Write

Main scanning direction	Sub scanning direction
Basic resolution	Basic resolution
600dpi	600dpi

c. Gradation/image processing

Scanning	Printing
256 gradations (8bit)	2 gradations (1bit)

d. Distortion
(4) Copy magnification

a. Copy magnification (independent magnification by direction is possible)

Main scanning direction		Sub scanning direction	
Mode	Magnification range/ fixed magnification	Mode	Magnification range/ fixed magnification
Zoom mode	25 – 400(200)%*	Zoom mode	25 – 400(200)%*
Fixed magnification mode (AB Series)	25, 50, 70, 81, 86, 100, 115, 122, 141, 200, 400%	Fixed magnification mode (AB Series)	25, 50, 70, 81, 86, 100, 115, 122, 141, 200, 400%
Fixed magnification mode (Inch Series)	25, 50, 64, 77, 100, 121, 129, 141, 200, 400%	Fixed magnification mode (Inch Series)	25, 50, 64, 77, 100, 121, 129, 141, 200, 400%

* When copying from SPF: 25 – 200%
  Preset copy magnification ratio: 4

b. Copy magnification precision

Main scanning direction		Sub scanning direction	
Copy magnification	Magnification precision	Copy magnification	Magnification precision
Normal copy	100% ± 0.8%	Normal copy	100% ± 0.8%
Enlargement copy	Set magnification ± 1.0%	Enlargement copy	Set magnification ± 1.0%
Reduction copy	Set magnification ± 1.0%	Reduction copy	Set magnification ± 1.0%

c. Zoom method

Main scanning direction	Performed through image processing
Sub scanning direction	Performed by changing image processing and scanning speed

(5) Job speed

a. First copy time

▲	AR-M550N/ M550U	AR-620N/ M620U	AR-M700N/ M700U
Document table	Within 3.9sec	Within 3.9sec	Within 3.3sec
DSPF	Within 6.1sec	Within 6.1sec	Within 5.5sec

* Measurement conditions: When paper of A4/8.5 x 11 is fed from the main unit tray, the polygon motor is rotating.

b. Copy speed

Copy mode	Paper size	AR-M550N/M550U			AR-620N/M620U			AR-M700N/M700U

(8) Transmission system

Mode	Scanner	Internet FAX	FAX
Transmission time	–		Between 2 and 3sec (Super G3/JBIG) Between 6 and 7sec (G3 ECM)
Modem speed	–		33.6kbps → 2.4kbps automatic fall back
Mutual communication	–		Super G3/G3
Communication line	–		Public Switched Telephone Network (PSTN), Private Branch Exchange (PBX), F net
ECM	–		○

(9) Record size

Mode	Scanner	Internet FAX	FAX
Max. record width	293mm		
Record size	–	–	A3 – A5, 11"×17" – 5.5"×8.5"

(10) F code communication

Mode	Scanner	Internet FAX	FAX
Sub address	–		○
⚠ Pass code	–		○

D. Printer function

Standard for the AR-M550N/M620N/M700N. The Printer expansion kit
⚠ AR-P19 is required for the AR-M550U/M620U/M700U.

(1) Platform

IBM PC/AT (or compatible) Macintosh (MacOS8.6 or later (excluding MacOS10.2.2) and Apple-Talk applicable)

(2) Support OS

Custom PS	Windows 95/98/Me
	Windows NT 4.0 Windows 2000 Windows XP
Custom PCL5e/ 6(XL)SPDL2	Windows 95/98/Me
	Windows NT 4.0 Windows 2000 Windows XP
PPD	Windows 95/98/Me
	Windows NT 4.0 Windows 2000 Windows XP
⚠	Mac OS8.6 – 9.x, 10.1.5 and 10.2 – 10.2.8 (excluding 10.2.2)

(3) PDL emulation

PCL5e compatible, PCL6 compatible, SPDL2 (Japan only), PostScript3 compatible (option)

(4) ESC/P, ESC/P super

(Japan only)

Emulation	ESC/P (VP-1100), ESC/P_super
Built-in fonts	Japanese: Mincho, Gothic (bitmap) ANK: Roman, Sans Serif (Bitmap)

(5) Built-in fonts

The printing system is provided with standard fonts of one type of HP compatible bitmap font and 80 types of Latin outline fonts for PCL.

In addition, by use of the PS expansion kit, 136 types of Latin outline fonts and 5 types of Japanese outline fonts are available.

Bitmap fonts	1 kind of font
PCL5 Latin font	80 PCL Latin fonts (SPDL) Standard built-in fonts
PCL Kanji font	Option (2 ACT Fonts)
PS Latin font	136 Type 1 Latin fonts Auxiliary to the PS expansion kit
PS kanji font	5 Type 1 Kanji Fonts Auxiliary to the PS expansion kit (Japan only)
Bar code font	Option

(6) Print channel

Support print channel	IEEE1284 parallel port PSERVER/RPRINT for NetWare environment LPR IPP PAP: EtherTalk (AppleTalk) FTP NetBEUI Raw Port (Port 9100) USB2.0
IEEE1284 parallel port	Receives print data via the standard IEEE1284 parallel port.
USB	USB 1.1: Windows98/98SE/Me/2000/XP only USB 2.0: Windows 2000 / XP only
For NetWare environment PSERVER/RPRINT	Used in NetWare environment. Print channel in the PSERVER/PRINT mode.
LPR	UNIX LPR/LPD command compatible print channel
IPP	IPP 1.0 conforming print channel
PAP: EtherTalk (AppleTalk)	Print channel used in the Macintosh environment
FTP	Function to print receive data by use of the built-in FTP server.
NetBEUI	Microsoft NetBEUI compatible print channel
Port9100	Supports TCP port 9100 (Raw port).

(7) Print function

Bar code font	(JetCAPS BarDIMM emulation)
EZ cluster	×
PDF/TIFF direct print	○

(8) Compatibility

PCL 5e compatible	PCL5e is aimed to provide compatibility with HP LaserJet 4050. A small difference in margin, a difference in rendering caused by a different font family, the default, a difference in the transfer function are not included in the compatibility. Not all PCL commands are included in the compatibility.
PCL6 compatible	PCL6 is aimed to provide compatibility with HP LaserJet 4050. A small difference in margin, a difference in rendering caused by a different font family, the default, a difference in the transfer function are not included in the compatibility. Not all PCL commands are included in the compatibility.

⚠ : Feb. 9 2004

PostScript compatible	PostScript is aimed to provide compatibility with Adobe PostScript. A small difference in margin, a difference in rendering caused by a different font family, the default, a difference in the transfer function are not included in the compatibility.
ESX/P and ESC/P Super compatible	ESC/P and ESC/P Super are aimed to provide compatibility with Epson VP-1100. A small difference in margin, a difference in rendering caused by a different font family, the default, a difference in the transfer function are not included in the compatibility.

(9) Environment setting

Setting item	General
Default setting	Basic setting of printing such as the number of copies and printing direction.
PCL (SPDL*) setting * SPDL is for Japan only.	PCL (SPDL) symbol setting and font setting
PS setting	Setting of print enable/disable in a PS error
ESC/P (super) setting (Japan only)	ESC/P font and return code setting

(10) Windows driver function

a. Frequently used functions

Function	PCL5e	PCL6	PS	PPD *1 (In the case of Windows XP)
Number of copies	1 – 999			
Print direction	Vertical/Horizontal			Vertical/Horizontal/ Horizontal rotation (*2)
Duplex print	Simplex print, duplex print (Left/ Upper/Right binding)			Simplex print, duplex print (Long side/Short side binding) (*2)
Center binding	Invoice on Letter, Letter on Ledger, A5 on A4, A4 on A3, B5 on B4, Letter on Letter, Ledger on Ledger, A4 on A4, A3 on A3, B4 on B4			Yes (2up booklet only) (*2)
Binding direction	Simplex print, duplex print (Left/ Upper/Right binding)			–
N-up	2/4/6/8			2/4/6/9/16 (*2)
N-up direction	Z	Z/Reverse Z/N/ Reverse N		Z (*2)
N-up frame line	○/X			○ (Always ○) (*2)

*1: For printing, the PS driver bundled in Windows is required.

*2: The PS driver bundled in Windows may differ in specifications depending on the OS.

b. Paper feed system

Function	PCL5e	PCL6	PS	PPD *1 (In the case of Windows XP)
Paper size	A3/B4/A4/B5/A5/Postcard/Ledger/Legal/Foolscap/ Letter/Executive/Invoice/8K/16K			
Paper type	Normal paper, letterhead, printed paper, punched paper, recycled paper, color paper, label sheet, thick paper, OHP, tab paper			
User definition type	7 types			–
Paper feed method	Auto paper feed, Tray 1/2/3/4/5, manual feed			
Cover paper/ Back cover page	○/X Setting of Duplex/Simplex/No print			–

Function	PCL5e	PCL6	PS	PPD *1 (In the case of Windows XP)
Insert paper	○/X Setting of Duplex/Simplex/No print			–
OHP insert paper	X, ○ (White paper), ○ (Printed paper)			–

*1: For printing, the PS driver bundled in Windows is required.

c. Paper exit method

Function	PCL5e	PCL6	PS	PPD *1 (In the case of Windows XP)
Paper exit destination setting	Center tray			
	Finisher → Tray 1			
	Finisher → Tray 2			
	Saddle stitch finisher → Tray 1 Saddle stitch finisher → Tray 2 Saddle stitch finisher → Saddle stitch tray		○ (*2)	
Staple	Finisher • No staple • 1 position • 2 positions			
	Saddle stitch finisher • No staple • 1 position • 2 positions			
Offset	○/X			

*1: For printing, the PS driver bundled in Windows is required.

*2: The PS driver bundled in Windows may differ in specifications depending on the OS.

d. Exposure

Function	PCL5e	PCL6	PS	PPD *1 (In the case of Windows XP)
Resolution	600/300dpi		600dpi	600dpi
Halftone	–	○/X (AR-M550N/U, AR-M620N/U) – (AR-M700U/N)	Screen Frequency 8.0 to 360.0 in 0.1 steps Screen angle 0.0 to 360.0 in 0.1 steps	–
Graphic mode selection	Luster HP-GL2	Luster vector	–	
Smoothing	○/X (AR-M550N/U, AR-M620N/U) – (AR-M700U/N)		○/X (AR-M550N/U, AR-M620N/U) – (AR-M700U/N: Display only and no function)	
Toner save	○/X			
Ultra fine photo	–			
Black-white reversion	–		○/X	
Mirror image	–		Horizontal/ Vertical	Horizontal (*2)
Zoom	–		25 – 400% (XY independent)	1 – 1000% (*2)
Fit page	○/X			–

*1: For printing, the PS driver bundled in Windows is required.

*2: The PS driver bundled in Windows may differ in specifications depending on the OS.

e. Font

Function	PCL5e	PCL6	PS	PPD *1 (In the case of Windows XP)
Download system which can be selected	Bitmap, TrueType	Bitmap, Type 1, TrueType	Auto, Outline, Bitmap, Native TrueType (*2)

*1: For printing, the PS driver bundled in Windows is required.

*2: The PS driver bundled in Windows may differ in specifications depending on the OS.

f. Other functions

Function	PCL5e	PCL6	PS	PPD *1 (In the case of Windows XP)
Units composition setting	O			
Watermark	O			O (Limitations on functions)
Overlay	O			–

Cover insertion +center binding	O			~
Document filing	O			–

*1: For printing, the PS driver bundled in Windows is required.

(11) Macintosh driver functions

a. Frequently used functions

Function	Macintosh PPD (In the case of Mac OS X Ver.10.2.8)
Number of copies	1 – 999
Print direction	Vertical/Horizontal/Horizontal rotation (*1)
Duplex print	Simplex print, duplex print, pamphlet (Left/Right/Upper binding)
Center binding	O
N-up	2/4/6/9/16 (*1)
N-up direction	Z/Reverse Z/N/Reverse N (*1)
N-up frame line	None / Single Hairline / Single Thinline / Double Hairline / Double Thinline (*1)

*1 : The PS driver bundled in Macintosh may differ in specifications depending on the OS.

b. Paper feed method

Function	Macintosh PPD (in the case of Mac OS X Ver.10.2.8)
Paper size	A3/B4/A4/B5/A5/Postcard/Ledger/Legal/Foolscap/Letter/Executive/Invoice/8K/16K
Paper type setting	Normal paper/Letter head/Printed paper/Punched paper/Recycled paper/Color paper/Label paper/Heavy paper/OHP/Tab paper

Function	Macintosh PPD (In the case of Mac OS X Ver.10.2.8)
User definition type	–
Paper feed method	Auto paper feed, Tray 1/2/3/4/5, manual feed
Paper feed tray of the first page	O/X (*1)
Cover paper/Back cover paper/Insert paper	– (OS9 only: None/before document/after document) (*1)
OHP insert paper	X, O (White paper), O (Printed paper)

*1: The PS driver bundled in Macintosh may differ in specifications depending on the OS.

c. Paper exit method

Function	Macintosh PPD (in the case of Mac OS X Ver.10.2.8)
Paper exit destination setting	Center tray
	Finisher Tray 1 Tray 2
	Saddle stitch finisher Tray 1 Tray 2 Saddle stitch tray
Staple	Finisher • No staple • 1 position • 2 positions
	Saddle stitch finisher • No staple • 1 position • 2 positions
Offset	O/X

d. Exposure

Function	Macintosh PPD (in the case of Mac OS X Ver.10.2.8)
Resolution	600dpi
Half tone	–
Graphic mode selection	–
Smoothing	O/X (AR-M550N/U, AR-M620N/U) – (AR-M700N/U)
Toner save	O/X
Ultra fine photo	O/X (AR-M550N/U, AR-M620N/U) – (AR-M700N/U)
Black-white reversion	–
Mirror image	–
Zoom	1-100000 (*1)
Fit page	–

*1 : The PS driver bundled in Macintosh may differ in specifications depending on the OS.

e. Font

Function	Macintosh PPD (In the case of Mac OS X Ver.10.2.8)
Download system which can be selected	– (Selection allowed only with Mac OS9 (LaserWriter)) (*1)

*1: The PS driver bundled in Macintosh may differ in specifications depending on the OS.

f. Other functions

Function	Macintosh PPD (In the case of Mac OS X Ver.10.2.8)
Units composition setting	O
Watermark	O
Overlay	X
Print hold	O
Job retention	O (PIN code input enable)

Function	Macintosh PPD (in the case of Mac OS X Ver.10.2.8)
Sample print	○
Print department management	○
User setting	–
Option auto setting	– (OS9 only: ○)
Job complete notification	–
Tandem print	○
Tab print	–
Carbon print	–
Enlargement continuous copy	–
Vertical/horizontal independent magnification ratio	–
Cover insertion +center binding	–
Document filing	Yes (*1)

(12) Print performance

Model	PDL type	Word: script.doc (jpn) 9 pages in total	Excel: EXCL.xls 3 pages in total	PowerPoint: J11.ppt 12 pages in total
AR-M550N/ M550U	PCL5 (SPDL2)	14sec	9sec	28sec
AR-M620N/ M620U	PCL5 (SPDL2)	13sec	8sec	24sec
AR-M700N/ M700U	PCL5 (SPDL2)	sec	sec	sec

* Measurement conditions
  Windows
  PC: Pentium III 1GHz 128MB
  OS: Windows XP Professional
  Macintosh
  PC: PowerPC G3 700MHz 256MB
  OS: MacOS X
Driver setting: Default
Software: Microsoft Office XP

E. Document filing function

(1) Basic function

Document filing capacity	16GB	
Fixed folder	Standard folder User folder	Max. 20000 pages or 3000 files
	Temporary folder	Max. 10000 pages or 1000 files
Number of pages for one file	Conforms to the large volume document mode. (Within the HD capacity)	
Number of folders which can be formed in the user folder	Max. 500 folders	
Number of users which can be registered	Max. 500 users	

(2) Data operation by each function (For S/U models, temporary saving only.)

Job	Each folder in the standard folder/user folder		Temporary folder	
	Common data	Confidential data	Common data	Confidential data
Copy	○	○	○	×
Printer	○	○	○	×
Scan to E-mail/FTP	○	×	○	×
Scan to HDD	○	○	×	×
FAX receive	×	×	×	×
FAX send	○	×	○	×
i-FAX receive	×	×	×	×
i-FAX send	○	×	○	×
PC FAX/PC i-FAX send	○	×	○	×

(3) Data operation contents

A: S/U model alone
B: Printer expansion kit (AR-P19)
C: Network expansion kit (AR-NS3)
D: FAX expansion kit (AR-FX8)

	A (S/U model)	A+B (M/N model)	A+C (+B)	A+D	A+B+D	A+B+C+D
Reprint	○	○	○	○	○	○
Resend *1	×	○	○	○	○	○
Delete	○	○	○	○	○	○
Shift	×	○	○	×	○	○
Attribute change *2 (Protection from common use, etc.)	○ (Protection from common use <> only)	○	○	○ (Protection from common use <> only)	○	○
File name change	○	○	○	○	○	○
Folder making (in the user folder)	×	○	○	×	○	○
File transfer to the local PC, FTP server	×	○	○	×	×	○
Machine HDD occupying rate display	×	○	○	×	○	○
Print log display, CSV export	×	○ (Enable only on the Web)	○ (Enable only on the Web)	×	○ (Enable only on the Web)	○ (Enable only on the Web)
Print data image view	×	○ (Enable only on the Web)	○ (Enable only on the Web)	×	○ (Enable only on the Web)	○ (Enable only on the Web)
Retrieval	○ (Simple)	○ (Simple)	○ (Simple)	○ (Simple)	○ (Simple)	○ (Simple)

*1: The resend enable modes (E-mail send, FAX send, internet FAX send, PC-FAX send, PC-i-FAX send) vary depending on the installation conditions of options.

*2: Attribute change: The file attribute is changed from "Common" to "Protection"/"Confidential", etc.

(4) Upper limit value of the storable file, folder, and user

The number of files storable in the standard folder and the user folder	Max. 3,000 files or 20,000 pages
The number of files storable in the temporary storage folder	Max. 1,000 files or 10,000 pages
The number of files storable in the user folder	Max. 500 folders
Number of users which can be registered	Max. 500 users

4. Safety and environmental protection standards

A. Safety standards

Item	Standard
Safety standards	Electric safety regulations
	UL
	CSA
	CE (SEMKO)
	GB4943
Environmental standards (EMC)	VCCI Class B
	FCC Class B
	CISPR22 B
	GB9254-1998 CLASSB
	GB17625.1-1998
	GB17625.2-1999
	GB/T17618-1998
Line standards (When the FAX expansion board is installed.)	Technical standard conformity acknowledgement (Telecommunications Business Law)
	FCC part 68
	ICCS-03
	ECCTR-21
	A-Tick

B. Environmental standards

(1) Power consumption and environmental standards

Standard
International energy program complex machine (EPS)
Environmental Choice Program (ECP)
Conforms to New Blue Angel.
Nordic swan (Sharp: Follows the Green Product Declaration.)

(2) Ozone level

Max. 0.02mg/m³

(3) Noise level

Model	Operating	Standby
AR-M550N/M550U	7.3B or less	5.5B or less
AR-M620N/M620U	7.3B or less	5.5B or less
AR-M700N/M700U	7.3B or less	5.5B or less

5. Ambient conditions

A. Space required

(1) Area required

Main unit	1263 × 679mm
With full options	2163×691.5mm (With the AR-LC6, AR-F15, AR-F16, AR-CF2 installed)

B. Operating ambient conditions

(1) Temperature/Humidity
(2) Power supply voltage and frequency

Power supply voltage	Rated voltage ± 10%
Power supply frequency	Rated frequency ± 2%

C. Ambient storage conditions

Main unit

Consumable items (unopened)
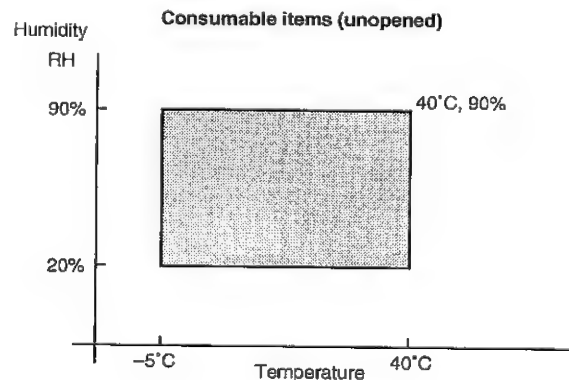

D. Ambient conditions for transporting

Main unit

Consumable items
E. Standard temperature and humidity

Temperature	20 to 25°C
Humidity	65 ± 5% RH

6. Service related items

Device cloning	○
Address book send/ receive tool	○
Humidifier heater	SEC only (Standard provision for Japan model) (Supplied as a service part)
RIC	Telephone line RIC terminal available
	E-mail RIC available (Conforming to soft key.)
Coin vendor terminal	○
Card counter	Angle/Harness parts supply
Key counter (SF-71A/B)	Only the harness is left.
Mechanical counter	Conforming to 7-digit OEM
	For SHARP (Parts support)

[5] EXTERNAL VIEW AND INTERNAL STRUCTURE

## 1. External view and operation parts

A. External view and external operation parts

(AR-F15)

No.	Parts		Note
	Name	Function/Operation	
1	Saddle stitch finisher (AR-F16) *1 / Finisher (AR-F15) *1	The finisher and the saddle stitch finisher include the offset function, which offsets each set of copies from the preceding set for easy separation. Each set of sorted copies can also be stapled. The saddle stitch finisher can automatically staple at the center line of a set of copies and fold the pages to create a pamphlet. A punch unit can be installed to add punch holes to copioes, and an inserter can be installed to insert blank pages at specified pages.	
2	Punch module (AR-PN4A) *1	Adds punch holes to printed pages.	
3	Inserter (AR-CF2) *1	The inserter enables blank sheets or printed sheets to be added to copy and print output as covers or inserts without printing. Printed output can also be fed one set at a time from the inserter for stapling or punching without performing stapling or staple sorting finishing.	
4	Automatic document feeder	This automatically feeds and scans multiple sheet originals. Both sides of two-sided originals can be scanned at once.	
5	Front cover	Open to replace toner cartridge.	
6	Operation panel	Performs various setting, display, and simulation operations.	
7	Center tray	Finished sheets are deposited here	
8	Bypass tray	Special papers (including transparency film) and copy paper can be fed from the bypass tray.	
9	Power switch	Turns the power on and off. If the power does not come on when the power switch is turned on, check the main power switch to see if it is turned on.	
10	Paper feed tray 5 (Large capasity tray (AR-LC6)) *1	The large capacity tray can hold up to 3,500 sheets of commonly used (8-1/2" x 11", B5, A4) SHARP standard paper (20 lbs. (80 g/m²)).	
11	Paper feed trays 1, 2	The trays hold paper. Approximately 800 sheets of standard 8-1/2" x 11" or A4 size paper (20 lbs. (80 g/m²)) can be loaded in tray 1, and approximately 1200 sheets of standard 8-1/2" x 11", A4 or B5 size paper (20 lbs. (80 g/m²)) can be loaded in tray 2.	
12	Paper feed tray 3	Tray 3 holds paper. Approximately 500 sheets of standard (20 lbs. (80 g/m²)) paper can be loaded in this tray. Tabbed paper and transparencies can also be loaded.	
13	Paper feed tray 4	Tray 4 holds paper. Approximately 500 sheets of standard (20 lbs. (80 g/m²)) paper can be loaded in this tray.	

*1: 1, 2, 3 and are peripheral devices. For information on these devices, see the explanations of the devices in the manual.

B. Internal operation parts
No.	Parts		Note
	Name	Function/Operation	
1	Duplex unit	Open this cover to remove a misfeed from the fusing unit area.	
2	Fusing unit	Toner images are fused here.	The fusing unit is hot. Take care in removing misfed paper.
3	Cover of the duplex unit	Open when a misfeed has occurred in duplex unit.	
4	Toner cartridge	The toner cartridge must be replaced when indicated on the operation panel.	
5	Main power switch	Keep this switch turned on when the fax option or network scanner option is installed.	
6	Right side cover	Open when a misfeed has occurred in bypass tray or large capacity tray.	
7	Upper cover of large capacity tray	Open when a misfeed has occurred in large capacity tray.	
8	Left side cover release	Push this knob up to open the left side cover.	
9	Left cover of paper drawer	Open this cover to remove paper misfed in the tray 3 and tray 4.	
10	Photoconductive drum	Images are formed on the photoconductive drum.	Do not touch or damage the photoconductive drum.

C. Operation, display parts

No.	Parts		Note
	Name	Function/Operation	
1	Touch panel	The machine status, messages and touch keys are displayed on the panel. The document filing, copy, network scanner*1, and fax*2 functions are used by switching to the screen for the desired function.	
2	Mode select keys and indicators	Use to change modes and the corresponding display on the touch panel. **[DOCUMENT FILING] key** Press to select the document filing mode. **[IMAGE SEND] key/LINE indicator/DATA indicator** Press to enter the network scan mode when the network scanner function is added. **[COPY] key** Press to select the copy mode.	
3	[PRINT] key/READY indicator/DATA indicator	Press to enter the print mode. **READY indicator** Print data can be received when this indicator is lit. **DATA indicator** Lights up or blinks when print data is being received. Also lights up or blinks when printing is being performed.	
4	[JOB STATUS] key	Press to display the current job status.	
5	[CUSTOM SETTINGS] key	This is used to store, edit, and delete user names and folder names for the document filing function, and to configure the key operator programs and printer configuration settings.	
6	Numeric keys	Use to enter number values for various settings.	
7	[ ] key ([ACC.#-C] key)	This key is used in copy mode, document filing mode, network scanner mode*1, and fax mode*2.	
8	[#/P] key	This is used as a program key when using the copy function, and to dial when using the fax function*2.	
9	[C] key	This key is used in copy mode, document filing mode, network scanner mode*1, and fax mode*2.	
10	[START] key	Use this key to start copying in copy mode, scan a document in network scanner mode*1, or scan a document for transmission in fax mode*2.	
11	[CA] key	This key is used in copy mode, document filing mode, network scanner mode*1, and fax mode*2. Use the key to cancel settings and perform an operation from the initial machine state.	

*1: When the network scanner option is installed.

*2: When the fax option is installed.

D. Job status screen (common to print, copy, network scan and internet fax)

This screen is displayed when the [JOB STATUS] key on the operation panel is pressed.
A job list showing the current job at the top of the job queue or a list showing completed jobs can be displayed.
The contents of jobs can be viewed or jobs can be deleted from the queue.

"Stored job/job in progress" job status screen

2 "Finished job" job status screen

No.	(Displayed in the touch panel)		Note
	Name	Function/Operation	
1	Job list	The displayed jobs in the job list are themselves operation keys. To cancel printing or to give a job the highest print priority, touch the relevant job key to select the job and execute the desired operation using the keys described in 8 and 9. This shows the current job and the jobs waiting to be run. The icons to the left of the jobs in the queue show the job mode. The document filing reprint job icon is highlighted. Note that the icon does not become highlighted during retransmission of a fax/image transmission job. Print mode Copy mode E-MAIL/FTP mode: Scan to e-mail job Scan to FTP job Scan to Sharpdesk job Fax mode: Fax send job Fax reception job PC-FAX send job Internet Fax mode i-Fax send job i-Fax reception job PC-Internet Fax send job	*1:"PAPER EMPTY" in the job status display When a job status display indicates "PAPER EMPTY", the specified paper size for the job is not loaded in any of the trays. In this case, the job will be suspended until the required paper is loaded. Other stored jobs will be printed (if possible) until the required paper is loaded. (Other jobs will not be printed if the paper runs out during printing.) If you need to change the paper size because the specified paper size is not available, touch the current job key to select it and then touch the [DETAIL] key described in 9.
2	Mode select key	This switches the job list display between "JOB QUEUE" and "COMPLETE". "JOB QUEUE": Shows stored jobs and the job in progress. "COMPLETE": Shows finished jobs. Files saved in the automatic temporary save folder by the document filing function and finished broadcast transmission jobs appear as keys in the finished job screen. An automatic temporary save file in the finished job screen or the [Filing] key can be touched, followed by the [CALL] key, to call up a finished job and print or transmit it. A finished broadcast transmission job key can be touched followed by the [DETAIL] key to check the result of the transmission.	
3	[PRINT JOB] key	This displays the print job list of print mode (copying, printing, fax reception, Internet fax reception, and self printing).	

No.	(Displayed in the touch panel)		Note
	Name	Function/Operation	
4	[E-MAIL/FTP] key	This displays the transmission status and finished jobs of scan mode (Scan to e-mail, Scan to FTP, and Scan to SharpDesk) when the network scanner option is installed.	
5	[FAX JOB] key	This displays the transmission/reception status and finished jobs of fax mode (fax and PC-Fax) when the fax option is installed.	
6	Display switching keys	Use to switch the page of the displayed job list.	
7	[INTERNET-FAX] key	This displays the transmission/reception status and finished jobs of Internet fax mode and PC Internet fax mode when the network scanner option is installed.	
8	[STOP/DELETE] key	Use to cancel or delete the current job or delete the selected reserved job. Note that printing of received faxes and received Internet faxes cannot be canceled or deleted.	
9	[PRIORITY] key	A stored job in the "JOB QUEUE" job list can be printed ahead of all other stored jobs by selecting the job and then touching this key.	
10	[DETAIL] key	This shows detailed information on the selected job. Files saved in the automatic temporary save folder by the document filing function and finished broadcast transmission jobs appear as keys in the finished job screen. An automatic temporary save file in the finished job screen or the [Filing] key can be touched, followed by the [CALL] key, to call up a finished job and print or transmit it. A finished broadcast transmission job key can be touched followed by the [DETAIL] key to check the result of the transmission.	
11	[CALL] key	When this key is touched after selecting a temporarily stored job in the finished job screen, the "JOB SETTINGS" menu screen appears to let you resend or reprint the finished job.

DSW-R	DSW-R	Manual paper feed unit open/close switch	Micro switch	Manual paper feed unit open/close detection, Main charger power source, Developing bias power line open/close			
MPSW		Main power switch	Seesaw switch	Turns ON/OFF all the power sources.			
MSW		Power switch	Seesaw switch	Turns ON/OFF the main DC power source. (Turns ON/OFF the engine power source except for the sub DC power source.)			Shut-off solenoid built-in
WH-SW	WH-SW	Dry heater switch	Seesaw switch	Turns ON/OFF the power line of the dry heater.			

C. Clutch/solenoid

Code	Signal name	Name	Function/Operation	Type	MODEL	NOTE
DGS	DGS	Paper exit gate solenoid	Paper exit gate drive	Electromagnetic solenoid		
DSKLS	DSKLS	Paper guide lock solenoid	Lock the horizontal transport paper guide.	Electromagnetic solenoid		
DSKPFC1	DSKPFC1	Paper feed tray 3/4 paper transport clutch 1	Paper feed tray 3/4 section paper transport roller ON/OFF control	Electromagnetic clutch		
DSKPFC2	DSKPFC2	Paper feed tray 3/4 paper transport clutch 2	Paper feed tray 3/4 section paper transport roller ON/OFF control	Electromagnetic clutch		
HPFC	HPFC	Horizontal paper transport clutch	Manual paper feed, paper feed tray 2 section, LCC paper transport roller ON/OFF control	Electromagnetic clutch		
M1PFC	M1PFC	Paper feed clutch (Paper feed tray 3)	Paper freed tray 3 section roller ON/OFF control	Electromagnetic clutch		
M1PUS	M1PUS	Paper pickup solenoid (Paper feed tray 3)	Presses the paper pickup roller onto paper.	Electromagnetic solenoid		
M2PFC	M2PFC	Paper feed clutch (Paper feed tray 4)	Paper freed tray 4 section roller ON/OFF control	Electromagnetic clutch		
M2PUS	M2PUS	Paper pickup solenoid (Paper feed tray 4)	Presses the paper pickup roller onto paper.	Electromagnetic solenoid		
MFPUS	MFPUS	Paper pickup solenoid (Manual paper feed)	Presses the paper pickup roller onto paper.	Electromagnetic solenoid		
MPFC	MPFC	Paper feed clutch (Manual paper feed)	Manual paper feed section paper feed roller ON/OFF control	Electromagnetic clutch		
MPFGS	MPFGS	Manual paper feed gate solenoid	Manual feed gate solenoid open/close control	Electromagnetic solenoid		
PSBC	PSBC	Resist roller brake clutch	Resist roller braking	Electromagnetic clutch		
PSPS	PSPS	Separation solenoid	OPC drum separation pawl drive	Electromagnetic solenoid		
RRC	RRC	Resist roller clutch	Resist roller ON/OFF control	Electromagnetic clutch		

| Code	Signal name	Name	Function/Operation	Type	MODEL	NOTE
SPFC	SPFC	SPF paper feed clutch	SPF paper feed section roller ON/OFF control	Electromagnetic clutch		
SRRBC	SRRBC	SPF resist roller brake clutch	SPF resist roller braking	Electromagnetic clutch		
SRRC	SRRC	SPF resist roller clutch	SPF resist roller ON/OFF control	Electromagnetic clutch		
STMPS	STMPS	Stamp solenoid control signal	Stamp drive	Electromagnetic solenoid		
STRBC	STRBC	SPF paper transport roller 2 brake clutch	SPF transport roller 2 braking	Electromagnetic clutch		
STRC	STRC	SPF paper transport roller 2 clutch	SPF transport roller 2 ON/OFF control	Electromagnetic clutch		
⚠ STRRBC	STRRBC	SPF No. 1 resist roller breake clutch	SPF transport roller 3 braking	Electromagnetic clutch		
⚠ STRRC	STRRC	SPF No. 1 resist roller clutch	SPF transport roller 3 ON/OFF control	Electromagnetic clutch		
T1PFC	T1PFC	Paper feed clutch (Paper feed tray 1)	Paper freed tray 1 section roller ON/OFF control	Electromagnetic clutch		
T1PUS	T1PUS	Paper pickup solenoid (Paper feed tray 1)	Presses the paper pickup roller onto paper.	Electromagnetic solenoid		
T2PFC	T2PFC	Paper feed clutch (Paper feed tray 2)	Paper freed tray 2 section roller ON/OFF control	Electromagnetic clutch		
T2PUS	T2PUS	Paper pickup solenoid (Paper feed tray 2)	Presses the paper pickup roller onto paper.	Electromagnetic solenoid		

D. Motor

Code	Signal name	Name	Type	Function/Operation	Active condition	MODEL	NOTE
⚠ ADM1	ADM1	Duplex (ADU) motor 1	Stepping motor	Drives the paper transport roller 2 and the paper transport roller 19.			High speed
ADM2	ADM2	Duplex (ADU) motor 2	Stepping motor	Drives the paper exit rollers 20 and 21.			Selection of Normal speed/High speed
DM	DM	OPC drum motor	DC brushless motor	Drives the OPC drum and the transfer section.			
DVM	DVM	Developing motor	DC brushless motor	Drives the developing section.			
FUM	FUM	Fusing motor	DC brushless motor	Drives the fusing section.			

|	Code	Signal name	Name	Type	Function/Operation	Active condition	MODEL	NOTE
	M1LUM	M1LUM	Paper feed tray lift-up motor (Paper feed tray 3)	DC brush motor	Drives the lift plate of the paper feed tray.			Selection of Rotation mode/ Brake mode
	M2LUM	M2LUM	Paper feed tray lift-up motor (Paper feed tray 4)	DC brush motor	Drives the lift plate of the paper feed tray.			Selection of Rotation mode/ Brake mode
	MIM	MIM	Scanner (reading) motor	Stepping motor	Drives the scanner (reading) section.			
	MM	MM	Main motor	DC brushless motor	Drives the paper feed trays 1, 2, 3, and 4, and the manual paper feed section.			
	PGM	PGM	LSU motor	DC brushless motor	Drives the scanner (writing) (LSU) unit mirror.			
	POM1	POM1	Paper exit motor 1	Stepping motor	Drives the paper transport roller 16.			Selection of Normal speed/ High speed
	POM2	POM2	Paper exit motor 2	Stepping motor	Drives the paper exit roller 1.			Selection of Normal speed/ High speed/ Reverse rotation
	SLU	/SLUM	SPF paper tray lift motor	Stepping motor	Lifts up and down the SPF paper feed tray.			
⚠	SPFM	SPFM1	SPF paper feed motor, paper transport motor	Stepping motor	Drives the paper feed roller and the transport roller.			
⚠	SPSM	SPFM2	SPF paper exit motor	Stepping motor	Drives the paper exit roller. (SPF)			
	T1LUM	T1LUM	Paper feed tray lift-up motor (Paper feed tray 1)	DC brush motor	Drives the lift plate of the paper feed tray.			Selection of Rotation mode/ Brake mode
	T2LUM	T2LUM	Paper feed tray lift-up motor (Paper feed tray 2)	DC brush motor	Drives the lift plate of the paper feed tray.			Selection of Rotation mode/ Brake mode
	TM1	TM1	Toner motor 1	Synchronous motor	Transports toner in the toner hopper to the developing unit. / Transports waste toner to the waste toner section.			
	TM2	TM2	Toner motor 2	Synchronous motor	Transports toner in the toner bottle to the toner hopper.			
	TRM	TRM	Resist roller front drive motor	Stepping motor	Drives the paper transport roller 15.			Normal speed mode/ Resist roller front paper transport timing control (Warp amount control)
⚠	TURM	TURM	Transfer separation motor	DC brush motor	Drives and separates the transfer belt.			When executing the process correction and detecting a jam, the transfer belt is separated from the OPC drum.
⚠	VPM	VPM	Vertical paper transport motor	Stepping motor	Drives the paper transport rollers 4 and 13.			Normal speed mode

E. Lamp

| Code	Signal name	Name	Type	Function/Operation	Active condition	MODEL	NOTE
CL1	CL1	Scanner lamp	Xenon lamp	Radiates lights onto a document for the CCD to scan the document image.			
CCFT	CCFT	LCD backlight	CCFT cool CRT	LCD backlight			
DL	DL	Discharge lamp	Lamp	Discharges electric charges on the OPC drum.			
LEDCL	LEDCL	CIS lamp (LED)	LED	Radiates lights onto a document for the CCD to scan the document image.			

F. Fan motor

Code	Signal name	Name	Type	Function/Operation	Active condition	MODEL	NOTE
CFM-DC1	CFM-DC1	Power cooling fan motor	DC brushless motor	Cools the DC power unit.			
CFM-DC2	CFM-DC2	Power cooling fan motor	DC brushless motor	Cools the DC power unit.			
CFM-DV	CFM-DV	Developing section cooling fan motor	DC brushless motor	Cools the developing section.			PWM control
CFM-HDD	CFM-HDD	HDD cooling fan motor	DC brushless motor	Cools the HDD.			PWM control
CFM-ICU	CFM-ICU	Controller cooling fan motor	DC brushless motor	Cools the controller.			PWM control
CFM-R1	CFM-R1	Process cooling fan motor 1 (LSU/process section)	DC brushless motor	Cools the LSU/ process section.			PWM control
CFM-R2	CFM-R2	Process cooling fan motor 2 (LSU/process section)	DC brushless motor	Cools the LSU/ process section.			PWM control
CFM-R3	CFM-R3	Process cooling fan motor 3 (LSU/process section)	DC brushless motor	Cools the LSU/ process section.			PWM control
CFM-U1	CFM-U1	Fusing section cooling fan motor 1 (Paper exit/duplex (ADU) section) (Top surface)	DC brushless motor	Exhaust heat from the fusing section.			PWM control
CFM-U2	CFM-U2	Fusing section cooling fan motor 2 (Paper exit/duplex (ADU) section) (Paper exit rear side)	DC brushless motor	Exhaust heat from the fusing section.			PWM control
CFM-U3	CFM-U3	Fusing section cooling fan motor 3 (Paper exit/duplex (ADU) section)(Top surface)	DC brushless motor	Exhaust heat from the fusing section.			PWM control
▲ CFM-U4	CFM-U4	Fusing section cooling fan motor 4 (Paper exit/duplex (ADU) section)(Paper cooling fan motor)	DC brushless motor	Cools paper which is discharged to the inner tray.			PWM control
▲ SPFFAN	SPFFAN	SPF fan motor	DC brushless motor	Exhausts heat generated by the motor clutch in the SPF.			PWM control

| Code	Signal name	Name	Type	Function/Operation	Active condition	MODEL	NOTE
VFM-BKL	VFM-BKL	Process exhaust fan motor 4	DC brushless motor	Exhaust ozone and heat from the process section.			PWM control
VFM-BKR	VFM-BKR	Fusing exhaust fan motor	DC brushless motor	Exhaust heat from the fusing section.			PWM control
VFM-BKU	VFM-BKU	Paper cooling fan motor	DC brushless motor	Exhaust heat from paper in the inner tray.			PWM control
VFM-EX1	VFM-EX1	Process exhaust fan motor 1 (Front side)	DC brushless motor	Exhaust ozone and heat from the process section.			PWM control
VFM-EX2	VFM-EX2	Process exhaust fan motor 2 (Center)	DC brushless motor	Exhaust ozone and heat from the process section.			PWM control
VFM-EX3	VFM-EX3	Process exhaust fan motor 3 (Rear side)	DC brushless motor	Exhaust ozone and heat from the process section.			PWM control

G. PWB (Main unit section)
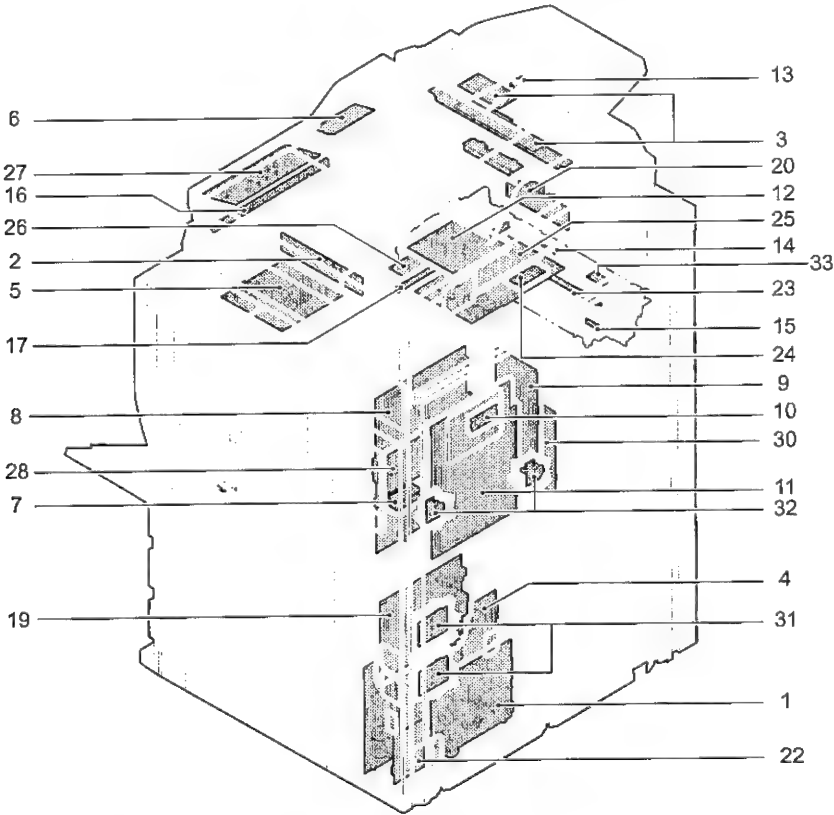

No	Name	Function/Operation	MODEL	NOTE
1	AC power PWB	Controls the AC power.		
2	CCD PWB	Scans document images.		
3	CIS control PWB/CIS unit	Scans document images (back surface) and controls the CIS unit.		
4	DC main power PWB	Generates the DC power.		
5	DC sub power PWB	Generates the DC power in the power save mode.		
6	LVDS/INV PWB	Generates the LCD display signal, and generates a high voltage for backlight.		
7	MFP FLASH ROM PWB	Stores the MFP control program.		
8	MFP controller PWB	Controls the image-related items and controls all over the machine.		
9	Mother PWB	Interfaces the MFP control PWB and the PCU PWB.		
10	PCU FLASH ROM PWB	Stores the PCU control program.		
11	PCU PWB	Controls the engine section.		
12	SPF PWB	Drives the SPF section loads./ Interfaces the sensor and detector signals.		
13	SPF paper width detection PWB	Detects the SPF paper tray paper width.		
14	Image density sensor PWB	Detects the toner patch density in the image density correction.		
15	OPC drum mark sensnor PWB	Detects the OPC drum mark.		
16	Document size detection light reception PWB	Generates the document size detection signal.		

| No	Name	Function/Operation	MODEL	NOTE
17	Document size detection light emitting PWB	Generates lights to detect the document size.		
19	High voltage PWB (MC/DV/TC)	Generates the main charger voltage, the developing bias voltage, the transfer voltage and the transfer belt cleaning voltage.		
20	Transfer bias high voltage PWB (TD CL)	Provides the bias voltage for the transfer cleaning roller and the print mode.		
22	Dehumidifier heater relay PWB	Controls ON/OFF of the dehumidifier heater.		
23	Discharge lamp PWB	Generates light for discharging.		
24	Scanner Flash PWB	Stores the scanner control program.		
25	Scanner control PWB	Controls the scanner section.		
26	Scanner relay PWB	Interfaces the scanner control PWB, the CCD PWB, the operation control PWB and the LVDS/INV PWB.		
27	Operationcontrol PWB	Controls the display operation panel.		
28	Soft NIC PWB	Controls the network.		
29	Manual feed paper width detection PWB	Detects the manual paper feed tray paper width.		
30	Driver PWB	Drives the motors.		
31	Paper size detection PWB (Paper feed tray 3, 4)	Detects the paper size.		
32	Detector PWB (Paper feed tray 1, 2)	Detects the paper empty and upper limit tray.		
33	Photoconductor temperature sensor PWB	Temperature detection around the photoconductor		

H. FAX section

No	Name	Function/Operation	MODEL	NOTE
1	MDMC PWB	Controls the Modem and the TEL/LIU PWB.	Modem control	FAX unit
2	FAX IF PWB	• Interfaces the MDMC PWB and the main unit controller PWB. • Installs the FAX image memory. (Expansion memory AR-MM9 can be installed.)		
3	TEL/LIU PWB	• Controls the line. (Call-out, polarity reversion detection, CI detection, line monitor, etc.) • Connection of an externally connected telephone line.		
4	FAX AC power 100	Generates the FAX DC power of 100V.		
5	FAX AC power 200	Generates the FAX DC power of 200V.		

I. Fuse/thermostat

J. Adjustment volume
Name	Function/Operation	MODEL	NOTE
RV102	DC sub power unit +12V power output voltage adjustment VR		
RV201	DC main power unit +38V power output voltage adjustment VR		
RV202	DC main power unit +24V power output voltage adjustment VR		

K. Gate
No.	Name	Function/Operation	MODEL	NOTE
1	Switchback gate	Selects the paper route when discharging paper to the inner tray and when switching back.		Switched not by the solenoid drive but by the automatic procedure.
2	Paper exit gate	Selects the paper route to transport paper to the duplex (ADU) section or to discharge paper.		Driven by the solenoid (DGS).
3	Manual feed gate	Specifies the lead edge position of paper when setting paper. (Prevention against double feed, and erroneous take-up of all paper into the paper feed roller)		

## L. Heater
| Code	Name	Type	Function/Operation	MODEL	NOTE
HL1	Heater lamp 1	Halogen lamp	Heats the center of the upper fusing roller.		
HL2	Heater lamp 2	Halogen lamp	Heats the both ends of the upper fusing roller.		
HL3	Sub heater lamp	Halogen lamp	Heats the fusing roller (pressing roller).		

Code	Name	Type	Function/Operation	MODEL	NOTE
WH1 DESK	Dry heater (Paper feed tray 1, 2)	Nichrome wire (18W)	Dehumidifies paper on the paper fee4d tray 1 and 2.		Standard for Japan model, option for the other destinations.
WH1 SCN	Scanner dry heater	Nichrome wire (7W)	Dehumidifies the scanner section.		Standard for Japan model, option for the other destinations.
WH2 DESK	Dry heater (Paper feed tray 3, 4)	Nichrome wire (10W)	Dehumidifies paper on the paper feed tray 3 and 4.		Standard for Japan model, option for the other destinations.

M. Lock position
| No.	Name	Function/Operation	MODEL	NOTE
1	Scanner lock screw	Locks the scanner. (Protects the scanner unit from breakage during transit.)		Bu sure to lock during transit.
2	Paper tray 1 lock block	Locks the paper lift plate		
3	Paper tray 2 lock block	Locks the paper lift plate		
4	Paper tray 3 lock block	Locks the paper lift plate		
5	Paper tray 4 lock block	Locks the paper lift plate		
6	Fusing pressure release screw	Apply and release a pressure to/from the fusing roller.		Release a pressure when storing for a long time.
7	OPC drum separation pawl lock block	Protects the OPC drum from contact with the separation pawl.		

N. Roller
No.	Name	Function/Operation	NOTE
1	Paper feed roller (Manual paper feed tray)	Feeds paper to the paper transport section.	
2	Separation roller (Manual paper feed tray)	Separates paper to prevent against double-feed.	
3	Paper pickup roller (Manual paper feed tray)	Sends paper to the paper transport section.	
4	Paper feed roller (No. 1 paper feed tray)	Feeds paper to the paper transport section.	
5	Paper pickup roller (No. 1 paper feed roller)	Sends paper to the paper transport section.	
6	Separation roller (No. 1 paper feed tray)	Separates paper to prevent against double-feed.	
7	Paper feed roller (No. 2 paper feed tray)	Feeds paper to the paper transport section.	
8	Separation roller (No. 2 paper feed tray)	Separates paper to prevent against double-feed.	
9	Paper pickup roller (No. 2 paper feed roller)	Sends paper to the paper transport section.	
10	Paper feed roller (No. 3 paper feed tray)	Feeds paper to the paper transport section.	
11	Separation roller (No. 3 paper feed tray)	Separates paper to prevent against double-feed.	
12	Paper pickup roller (No. 3 paper feed roller)	Sends paper to the paper transport section.	
13	Paper feed roller (No. 4 paper feed tray)	Feeds paper to the paper transport section.	
14	Separation roller (No. 4 paper feed tray)	Separates paper to prevent against double-feed.	
15	Paper pickup roller (No. 4 paper feed roller)	Sends paper to the paper transport section.	
16	Resist roller (Drive)	Transports paper to the transfer section. / Controls the paper transport timing and adjusts the relative relationship between the image and paper.	
17	Resist roller (Idle)	Applies a pressure to paper and the resist roller to provide a transport power of the transport roller to paper.	

No.	Name	Function/Operation	NOTE
18	Transport roller 1 (Drive)	Transports paper fed from the large capacity tray (LCC) to the transport roller 2.	
19	Transport roller 1 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
20	Transport roller 2 (Drive)	Transports paper transported from the manual paper feed and the transport roller 1 to the transport roller 3.	
21	Transport roller 2 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
22	Transport roller 3 (Drive)	Transports paper transported from the paper feed tray 2 and the transport roller 2 to the transport roller 3.	
23	Transport roller 3 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
24	Transport roller 4 (Drive)	Transports paper transported from the transport roller 3 to the transport roller 15.	
25	Transport roller 4 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
26	Transport roller 5 (Drive)	Transports paper fed from the paper feed tray 4 to the transport rollers 6 and 7.	
27	Transport roller 5 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
28	Transport roller 6 (Idle)	Reduces friction between paper and the paper guide.	
29	Transport roller 7 (Drive)	Transports paper transported from the transport roller 5 to the transport roller 10.	
30	Transport roller 7 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
31	Transport roller 8 (Drive)	Transports paper transported from the paper feed tray 3 to the transport rollers 9 and 10.	
32	Transport roller 8 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
33	Transport roller 9 (Idle)	Reduces friction between paper and the paper guide.	
34	Transport roller 10 (Drive)	Transports paper transported from the transport rollers 7 and 8 to the transport roller 11.	
35	Transport roller 10 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
36	Transport roller 11 (Drive)	Transports paper transported from the transport roller 10 to the transport roller 13.	
37	Transport roller 11 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
38	Transport roller 12 (Idle)	Reduces friction between paper and the paper guide.	
39	Transport roller 13 (Drive)	Transports paper fed from the paper feed trays 1, 3, and 4 to toe transport roller 15.	
40	Transport roller 13 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
41	Transport roller 14 (Idle)	Reduces friction between paper and the paper guide.	
42	Transport roller 15 (Drive)	Transports paper to the transport resist roller.	
43	Transport roller 15 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
44	Transport roller 16 (Drive)	Transports paper from the fusing roller to the paper exit roller 1.	
45	Transport roller 16 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
46	Transport roller 17 (Idle)	Reduces friction between paper and the paper guide.	
47	Transport roller 18 (Idle)	Reduces friction between paper and the paper guide.	
48	Transport roller 19 (Drive)	Transports paper transported from the paper exit roller 2 to the transport roller 20.	
49	Transport roller 19 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
50	Transport roller 20 (Drive)	Transports paper transported from the transport roller 19 to the transport roller 21.	
51	Transport roller 20 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
52	Transport roller 21 (Drive)	Transports paper transported from the transport roller 20 to the transport roller 15.	
53	Transport roller 21 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
54	Transport roller 22 (Idle)	Reduces friction between paper and the paper guide.	
55	Paper exit roller 1 (Drive)	Discharges paper to the paper exit tray. / Switches back paper.	

| No.	Name	Function/Operation	NOTE
56	Paper exit roller 1 (Idle)	Applies a pressure to paper and the paper exit roller to provide a transport power of the paper exit roller to paper.	
57	Paper exit roller 2 (Drive)	Discharges paper. / Transports paper to the duplex (ADU) section.	
58	Paper exit roller 2 (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the paper exit roller to paper.	
▲ 59	Transfer drive roller (Drive)	Drives the transfer belt.	
60	Transfer roller (Idle)	Helps to hold the transfer belt.	
61	Fusing roller (Pressing)	Applies a pressure to the fusing roller (heating).	
▲			
63	Sub heat roller	Heats the fusing roller (pressing).	
▲			
65	Fusing roller (Heating)	Heat and press toner onto paper to fuse images.	
66	Paper feed roller (SPF)	Feeds paper to the paper transport section.	
67	Separation roller (SPF)	Separates paper to prevent against double feed.	
68	Paper pickup roller (SPF)	Sends paper to the paper feed roller.	
69	Transport roller 1 (Drive) (SPF)	Transports paper (which is transported by the first resist roller) to the second resist roller.	
70	Transport roller 1 (Idle) (SPF)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
71	First resist roller (Drive) (SPF)	Controls the paper transport timing. / Adjusts paper to be horizontal.	
72	First resist roller (Idle) (SPF)	Applies a pressure to paper and the resist roller to provide a transport power of the resist roller to paper.	
73	Transport roller 2 (Drive) (SPF)	Transports paper transported from the paper exit roller 1 to the transport roller 3.	
74	Transport roller 2 (Idle) (SPF)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
75	First resist roller (Drive) (SPF)	Controls the paper transport timing. / Adjusts paper to be horizontal.	
76	First resist roller (Idle) (SPF)	Applies a pressure to paper and the resist roller to provide a transport power of the resist roller to paper.	
77	Paper exit roller (Drive) (SPF)	Discharges paper.	
78	Paper exit roller (Idle) (SPF)	Applies a pressure to paper and the paper exit roller to provide a transport power of the paper exit roller to paper.	
79	Transfer cleaning roller	Cleans the transfer belt.	
80	Transfer tension roller	Applies a proper tension to the transfer belt.	
81	Transfer roller	Applies a proper voltage to the transfer belt.	
82	Transfer roller 1A (Drive)	Transports paper (which is fed from the manual paper feed tray) to the transport roller.	
83	Transfer roller 1A (Idle)	Applies a pressure to paper and the transport roller to provide a transport power of the transport roller to paper.	
▲ 84	Cleaning brush roller	Removes paper dust from the photoconductor drum.	

O. Filter

| No.	Name	Function/Operation	MODEL	NOTE
1	Ozone filter	Absorbs ozone generated in the image process section.		
2	Toner filter	Filters dispersed toner in the process section.		

# [6] DETAILS OF EACH SECTION

1. Operation panel section
**2. Paper feed, paper transport, duplex, and paper exit reverse sections**
3. Laser scan unit (LSU)

**4. Image process section**

**5. Scanner section**

6. Fusing section

7. SPF section

8. Drive section

9. Filters

10. PWB section

11. Power section

12. Fan motors

13. Sensors and switches

1. Operation panel section

A. General

This section describes various types of settings, display and operation.

The LCD display section is controlled by the MFP CONTROL PWB.

The touch panel, operation keys and LED display are controlled by the SCANNER CONTROL PWB.

B. Major parts and signal functions

OPERATION PANEL UNIT

Code	Signal name	Name	Function/Operation	Type	Model	Note
LCD		LCD unit	Display the each memu and the information.			
TOUCH		Touch panel	Various adjustments and setting operation are performed.			
ORSLED		Document size detection light emitting PWB	Generates the document size detection signal.			
ORSPD		Document size detection light receiving PWB	Generates the document size detection signal.			
OCSW	OCSW	SPF open/close detector	Document size detection trigger	Transmission type		Sensor
/CCFT	/CCFT	LCD backlight	LCD backlight	CCFT cool CRT		

No.	Name	Function
1	LVDS/INV PWB	Generates the LCD display signal and a high voltage for the backlight.
2	Operation control PWB	Controls the display operation panel.

C. Maintenance and parts replacement

(List of Replacement Parts)

No.	Unit		Parts
a	Operation panel unit	1	Operation control PWB
		2	LVDS/INV PWB
b	LCD unit	1	Touch panel
(1) Maintenance and parts replacement

a. Operation panel unit

1) Remove the table glass.
2) Remove the operation section cover.
3) Remove each cable.
4) Remove the ground lead.
5) Remove the operation panel unit.

⚠ : Feb. 6 2004
a-1. Operation control PWB

1) Remove the operation panel unit. (See "a. Operation panel unit")
2) Remove the ground lead.

⚠
3) Remove the operation control PWB.

a-2. LVDS/INV PWB

1) Remove the operation panel unit. (See "a. Operation panel unit")
2) Remove the ground lead.

⚠
3) Remove each cable.
4) Remove the LVDS/INV PWB.

b. LCD unit

1) Remove the operation panel unit. (See "a. Operation panel unit")
2) Remove each cable.
3) Remove the LCD cover.

4) Remove the LCD unit.
b-1. Touch panel

1) Remove the operation panel unit. (See "a. Operation panel unit")
2) Remove the LCD unit.
3) Remove the flat cable.
4) Remove the touch panel.
2. Paper feed, paper transport, duplex, and paper exit reverse sections
[Paper feed section]

General

The paper feed tray 1 holds 900 sheets, the paper feed tray 2 holds 1,300 sheets, the multi-purpose paper feed tray 3 holds 500 sheets, the paper feed tray 4 holds 500 sheets, and the manual paper feed tray holds 100 sheets. Those paper feed units are standard provisions.

a. Multi manual paper feed tray unit

1) Pull out the multi manual paper feed tray unit.
2) Remove the multi manual paper feed tray unit from the right and left accurides.
a-1. Manual paper feed unit open/close switch

1) Pull out the multi manual paper feed tray unit. (See "a. Multi manual paper feed tray unit")

2) Remove the manual feed upper cover.
3) Remove the manual feed front cover.
4) Remove the manual paper feed unit open/close switch.
a-2. Manual feed empty detector

1) Pull out the multi manual paper feed tray unit. (See "a. Multi manual paper feed tray unit")

2) Remove the manual feed upper cover. (See "a-1. Manual paper feed unit open/close switch")

3) Remove the pickup cover.
4) Remove the actuator unit.
5) Remove the manual feed empty detector.
a-3. Pickup roller

a-4. Paper feed roller

a-5. Separation roller

1) Pull out the multi manual paper feed tray unit. (See "a. Multi manual paper feed tray unit")

2) Remove the actuator unit. (See "a-3. Pickup roller")

3) Unhook the claw to remove the pickup roller.
4) Unhook the claw to remove the paper feed roller.
5) Remove the separation roller cover.
6) Remove the separation roller.
a-6. Torque limiter

1) Pull out the multi paper feed tray unit. (See "a. Multi manual paper feed tray unit")

2) Remove the bottom cover.
3) Remove the separation roller.
4) Remove the separation roller shaft, and remove the torque limiter.
a-7. Manual feed gate solenoid

1) Remove the multi manual paper feed tray unit. (See "a. Multi manual paper feed tray unit")

2) Remove the bottom cover. (See "a-6. Torque limiter")

3) Disconnect the connector, and remove the manual paper feed gate solenoid unit.
4) Remove the manual feed gate solenoid.
▲ * When assembling, tighten the screw so that the lever tip is at 13±0.5mm from the frame edge with the solenoid plunger pulled.

13±5mm
a-8. Manual feed paper pass detector 1

1) Remove the multi manual paper feed tray unit. (See "a. Manual paper feed tray unit")
2) Remove the bottom cover. (See "a-6. Torque limiter")
3) Disconnect the connector, and remove the manual paper feed paper pass detector 1.
a-9. Paper feed clutch

1) Remove the multi manual paper feed tray unit. (See "a. Multi manual paper feed tray unit")
2) Remove the upper cover. (See "a-3. Pickup roller")
3) Remove the front cover.
4) Remove the interface pass earth plate, the E-ring, and the bearing, and remove the manual paper feed mounting plate.
5) Remove the connector and the E-ring, and remove the paper feed clutch.

* When assembling, fit the rotation stopper of the paper feed clutch with the clutch fixing screw.

a-10. Paper pickup solenoid

1) Remove the multi manual paper feed tray unit. (See "a. Multi manual paper feed tray unit")
2) Remove the manual paper feed upper cover and the pickup upper cover. (See "a-3. Pickup roller")
3) Remove the front cover, and remove the manual paper feed mounting plate. (See "a-9. Paper feed clutch")
4) Remove the spring.
5) Disconnect the connector, and remove the paper pickup solenoid unit.
6) Remove the paper pickup solenoid.

(Note for assembly)

Check that there is a clearance when the solenoid plunger is pulled.
4.2mm

a-11. Manual feed paper width size detection PWB

1) Remove the multi manual paper feed tray unit. (See "a. Multi manual paper feed tray unit")

2) Remove the multi tray 250 lower.

3) Remove the width detection mounting plate.

4) Remove the pawl and the connector, and remove the manual paper feed VR PWB.

a-12. Manual feed paper length detector 1

a-13. Manual feed paper length detector 2

a-14. Manual tray pull-out position detector 1

a-15. Manual tray pull-out position detector 2

1) Remove the multi manual paper feed tray unit. (See "a. Multi manual paper feed tray unit")

2) Remove the multi tray 250 lower. (See "a-11. Manual feed paper width size detection PWB")

3) Remove the manual paper feed tray lower.

4) Disconnect the connector, and remove the manual paper feed length detector 1 (A) and the manual paper feed length detector 2 (B).
5) Disconnect the connector, and remove the manual paper feed tray pull-out position detector 1(A) and the manual paper feed tray pull-out position detector 2 (B).
▲ [Others]

1) Slide the harness holder in the direction of Y and install it. The band must be in the range of A. Pull section B in the arrow direction to give a slack to the harness.
2) Fold the harness with your fingers and check that the harness keeps the folded shape along the holder when it is released. Rib C must be separated from the harness.

(Paper feed tray sections 1 and 2)

T2S PWB	T2S PWB	Defector PWB (Paper feed tray 2)	Paper tray upper limit detection and paper empty detection (Paper feed tray 2)			

No.	Name	Function
1	Lift wire	Transmits drive power of the paper feed tray lift motor to the paper feed tray.
2	Paper feed table	Paper is put on this table.
3	Paper feed tray unit 1, 2 regulation plates L/R	Regulates the paper width to restrict skew to the minimum.
4	Pulley	Transmits drive power of the paper feed tray lift motor to the paper feed tray.
5	Paper pickup roller	Sends paper to the paper feed roller.
6	Separation roller	Separates paper to prevent against double feed.
7	Paper feed roller	Feeds paper to the paper transport section.
8	Torque limiter	

## B. Operational descriptions

(1) Paper feed operation

a. Preliminary operation before paper feed

1) Set paper in the tray, and insert the tray into the machine. The tray sensor turns on.
2) The lift-up motor operates to lift the tray.
3) The paper upper limit sensor turns on to stop the tray at the specified position.

b. Paper feed operation

1) When copy/print operation is started, the motors (MM, FUM, VPM, and TRM) and the clutch (TRC) are turned on to turn on the solenoid (T1PUS) at the timing of paper pickup. This rotates and falls the take-up roller to pick up paper.

2) At the same time, the paper feed roller rotates to feed paper to the transport section. At that time, the separation roller rotates to prevent against double feed of paper.
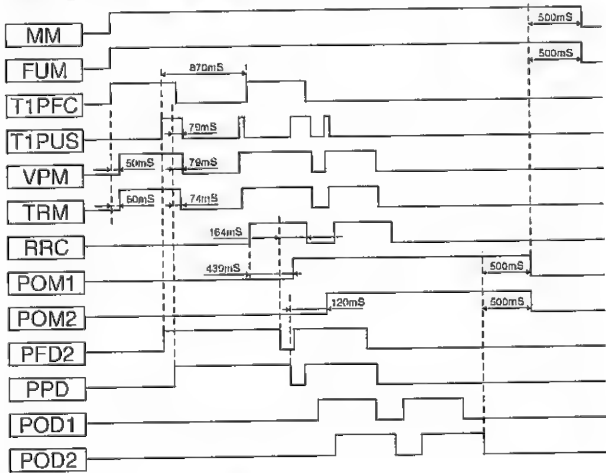

(2) Each paper feed tray paper size detection method

a. Paper feed tray 1, 2

The paper feed tray 1 is used exclusively for A4 (11 x 8.5) paper size.

The paper feed tray 2 is used for A4, 11 x 8.5, or B5 paper size.

To change the paper size, change the paper guide and change the set value of SIM 26-2.

C. Maintenance and parts replacement

a. Paper feed tray units 1 and 2

1) Pull out the paper feed tray units 1 and 2.

2) Remove the fixing screws from the right and left rails.
3) Remove while holding the points shown in the diagram with two hands.

a-1. Pickup roller

1) Pull out the paper feed tray units 1 and 2. (See "a. Paper feed tray units 1 and 2")

2) Unhook the claws to remove the paper guide.

3) Unhook the claw to lift up the first paper feed tray feed section, and then remove the pickup roller.

a-2. Paper feed roller

1) Pull out the paper feed tray units 1 and 2. (See "a. Paper feed tray units 1 and 2")

2) Unhook the claws to remove the paper guide. (See "a-1. Pickup roller")

3) Unhook the claw to lift up the first paper feed tray feed section, and then remove the paper feed roller.

a-3. Separation roller

1) Pull out the paper feed tray units 1 and 2. (See "a. Paper feed tray units 1 and 2")

2) Unhook the claws to remove the paper guide. (See "a-1. Pickup roller")

3) Remove the lower paper guide.

4) Unhook the claws to remove the reverse roller.

a-4. Torque limiter

1) Pull out the paper feed tray units 1 and 2. (See "a. Paper feed tray units 1 and 2")

2) Unhook the claws to remove the paper guide. (See "a-3. Separation roller")

3) Remove the reverse roller unit.
4) Remove the torque limiter.
a-5. Lift wire (Rear)

1) Remove the paper feed tray units 1 and 2. (See "a. Paper feed tray units 1 and 2" in "(Paper feed tray sections 1 and 2)"

2) Remove the E-ring, slide the winding pulley, and loosen the wire.
3) Release the pawl, and remove the wire.
4) Remove the plastic E-ring.
5) Remove the wire.
* Pass the nylon clamp.
* Attach so that the red wire is on the outside.
* Turn it clockwise to fit with the T-shape pin position and insert.
a-6. Lift wire (Front)

1) Remove the paper feed tray 1/2 unit. (See "(Paper feed tray sections 1 and 2)" in "a. Paper feed tray units 1 and 2")

2) Push down the tray and remove the screw, and remove the paper feed tray 1/2 front cabinet.
3) Remove the E-ring, slide the winding pulley, and loosen the wire.
4) Release the pawl, and remove the wire.
5) Remove the plastic E-ring.
6) Remove the wire.
* Pass the nylon clamp.
* Attach so that the red wire is on the outside.

* Turn it counterclockwise and fit with the T-shape pin position and insert.
b-1. Paper remaining quantity sensor PWB

1) Remove the paper feed tray units 1 and 2. (See "a. Paper feed tray units 1 and 2" in this section)
2) Disconnect the connector, and remove the paper remaining quantity sensor PWB.
b-2. Paper remaining quantity detector

1) Remove the paper feed tray units 1 and 2. (See "a. Paper feed tray units 1 and 2" in this section)
2) Disconnect the connector, and remove the paper feed tray lock arm unit.
3) Disconnect the connector, and remove the paper remaining quantity detector.
b-3. Paper feed trays 1 and 2 sensor

1) Remove the rear cabinet.
2) Disconnect the connector, and remove the paper feed trays 1 and 2 sensor.
b-4. Dry heater

1) Remove the rear cabinet. (See "b-3. Paper feed trays 1 and 2 sensor" in this section)

2) Disconnect the connector from the dehumidifier heater relay PWB.

3) Remove the paper feed tray unit, and remove the dry heater band.

4) Remove the dry heater unit.

4) Remove the dry heater.

(Paper feed trays 3 and 4)

M2SS PWB		Paper size detection PWB	Paper size detection			

| No.	Name	Function
1	Paper size detection plate	Changes its own position in conjunction with the paper size (length) adjustment lever. By this operation, the paper size detector detects the paper size.
2	Paper widht guide R	Suppresses skew to the minimum by restricting the paper width.
3	Paper size detection rotation plate	Changes its own position in conjunction with the paper size (length) adjustment lever. By this operation, the paper size detection plate position is changed and the paper size detector detects the paper size.
4	Paper size (length) guide plate	Regulates the paper size (length).
5	Paper widht guide L	By restricting the paper width, skew is restricted to the minimum.
6	Lift plate	Lifts the paper to maintain the paper feed position at the fixed position.
7	Paper pickup roller	Sends paper to the paper feed roller.
8	Separation roller	Separate paper to prevent against double feed
9	Paper feed roller	Feeds paper to the paper transport section.
10	Transport roller 8 (Paper feed tray 3) Transport roller 5 (Paper feed tray 4)	Transports paper from the paper feed tray 3 to the transport rollers 9 and 10. Transports paper from the paper feed tray 4 to the transport rollers 6 and 7.
11	Transport roller 10 (Paper feed tray 3) Transport roller 7 (Paper feed tray 4)	Transports paper from the transport rollers 7 and 8 to the transport roller 11. Transports paper from the transport roller 5 to the transport roller 10.
12	Torque limiter	Provides a certain level of resistance power for the paper separation roller rotation to prevent against double feed.

B. Operational descriptions

(1) Each paper feed tray paper size detection method

a. Multi-purpose paper feed tray (Tray 3), paper feed tray (Paper feed tray 4)

1) Paper width detection

The paper width is calculated with the VR voltage value (A/D conversion value) linked with the side guide plate.

Paper width and paper size (set in the range of standard value ±6 [mm]).

Width size detection pattern	Paper size	Standard value [mm]	Range [mm]
A	A3/A4	297.0	303.0 - 291.0
B	WLT/LT	279.4	285.4 - 273.4
C	B4/B5	257.0	263.0 - 251.0
D	LG/LTR/Foolscap	215.9	221.9 - 209.9
E	A4R	210.0	216.0 - 204.0
F	Exective-R	184.1	190.1 - 178.1
G	B5R	182.0	188.0 - 176.0

2) Paper size detection

The paper size detection is made by the combination of the cassette paper size detector 1 to 4.
Relationship Between Paper Size and Detection by the Paper Size Detector

Vertical size detection pattern	Detection SW status				AB size	Inch size	Width of detection range
	CSS1	CSS2	CSS3	CSS4			
1	ON	ON	OFF	ON	B5	Extra	147.0 - 198.0
2	OFF	ON	OFF	ON	A4	LT	198.0 - 237.0
3	OFF	ON	ON	ON	B5R	EX-R	237.0 - 274.0
4	OFF	OFF	ON	ON	A4R	LTR	274.0 - 314.0
5	ON	OFF	ON	ON	Foolscap	Extra	314.0 - 347.0
6	ON	OFF	ON	OFF	B4	LGL	347.0 - 389.0
7	ON	ON	ON	OFF	A3	WLT	389.0 - 432.8
0	OFF	OFF	OFF	OFF	Paper feed tray not attached		

3) Combination of size detection

Paper size	Width detection pattern	Vertical detection pattern
B5	C	1
A4	A	2
B5R	G	3
A4R	E	4
Foolscap	D	5
B4	B	6
A3	A	7
LT	B	2
EX-R	F	3
LTR	D	4
LGL	D	6
WLT	B	7

(2) Remaining paper detection

a. Remaining paper detection

Remaining paper detection is performed according to four stages, i.e. three stages with paper and one stage with no paper, and the result is displayed.

b. Detection method

The number of remaining sheets is determined according to the number of times the remaining paper sensor changes from the time the paper feed tray starts lifting up to the time when the upper detection sensor comes ON.

(Figure showing state transition of the remaining paper detection sensor during tray elevation and changes in status according to the number of remaining sheets)

The no-paper detection sensor detects the state of no remaining paper.

During no-paper detection

⚠ **a. Paper feed tray units 3 and 4**

1) Gently pull out the paper feed tray until it stops.
2) Lifting up the paper feed tray unit slightly, remove it at an angle from the right side.
3) Open the bottom left cabinet.
4) Remove the connector cover.
⚠ 5) Disconnect the connectors.
6) Remove the paper feed tray paper feed units 3 and 4 from the lower shelf.
a-1. Pickup roller

1) Remove the paper feed tray units 3 and 4. (See "a. Paper feed tray units 3 and 4")

2) Remove the paper guide.
3) Unhook the claws to remove the pickup roller.
a-2. Paper feed roller

1) Remove the paper feed tray units 3 and 4. (See "")
2) Remove the paper guide. (See "a-1. Pickup roller")
3) Release the pawl, and remove the paper feed roller.
a-3. Separation roller

1) Remove the paper feed tray units 3 and 4. (See "")
2) Remove the paper guide. (See "a-1. Pickup roller")
3) Release the pawl, and remove the separation roller.
a-4. Torque limiter

1) Remove the paper feed tray units 3 and 4. (See "")
2) Remove the E-ring, the gear and the pin.
3) Remove the E-ring and the bearing.
4) Remove the separation roller unit.
5) Remove the E-ring, and one-way clutch.
6) Remove the E-ring and shift the separation roller shaft.
7) Remove the shaft unit.
8) Remove the torque limiter.
a-5. Paper pickup solenoid

1) Remove the paper feed tray 3/4. (See "")
2) Remove the cover.
3) Remove the solenoid unit.
4) Remove the paper pickup solenoid.
a-6. Paper feed tray upper limit detector

a-7. Paper feed tray empty detector

1) Remove the paper feed tray 3/4. (See "")
2) Remove the cover. (See "a-5. Paper pickup solenoid")
3) Remove the paper feed tray upper detector unit (a) and the paper feed tray empty detector unit (b).
4) Remove the detector.

a-8. Transport roller 8, 10

1) Remove the paper feed tray 3/4. (See "")
2) Remove the cover.(See "a-5. Paper pickup solenoid")
3) Remove the E-ring and remove the pulley bearing.
4) Remove the transport roller 8, 11.

a-9. Transport roller 5, 7

1) Remove the paper feed tray 3/4. (See "")
2) Remove the cover. (See "a-5. Paper pickup solenoid")
3) Remove the E-ring and remove the pulley bearing.
4) Remove the transport roller 5, 7.

a-10. Paper pass detector

1) Remove the paper feed tray 3/4.
2) Remove the cover. (See "a-5. Paper pickup solenoid")
3) Remove the paper pass detector unit.
4) Remove the paper pass detector.

b-1. Paper size detection PWB

1) Remove the paper feed unit. (See "a-1. Pickup roller" in this section)
2) Disconnect the connector, and remove the paper size detection PWB unit.
3) Release the pawl, and remove the paper size detection PWB.
b-1. Paper remaining quantity detector

1) Remove the paper feed unit. (See "a-1. Pickup roller" in this section)
2) Disconnect the connector, and remove the paper remaining quantity detector unit.
3) Remove the paper remaining quantity detector cover. Remove the paper remaining quantity detector.
b-3. Paper feed tray paper width detector

1) Remove the paper feed tray 3/4 unit lower. (See "a. Paper feed tray units 3 and 4" in this section)
2) Remove the paper feed unit. (See "a-1. Pickup roller" in this section)
⚠ 3) Disconnect the connector, and release the pawl, and remove the width detection unit.
4) Remove the spring, and remove the paper width mounting base. Remove the width detection arm and remove the paper feed tray paper width detector.
b-4. Dry heater

1) Remove the paper feed tray 3/4 unit lower. (See "a. Paper feed tray units 3 and 4" in this section)
2) Remove the paper feed unit. (See "a-1. Pickup roller" in this section)
⚠ 3) Remove the paper feed lower cover.
⚠ 4) Remove the rear cabinet.
5) Disconnect the connector from the dehumidifying heater relay PWB, and remove the band.
6) Remove the dry heater unit.
7) Remove the dry heater.
[Paper Transport Section]

Outline

The paper transport section serves the function of transferring paper from each paper feed port to the registration roller section.

Paper from manual feed, paper feed tray units 1 and 2 (optional), and the right paper feed tray of the paper feed tray units 1 and 2 is transported horizontally, whereas paper from the left paper feed tray of the paper feed tray units 1 and 2, paper feed tray 3 and paper feed tray 4 is transported vertically to the registration roller section.

After the leading edge of the paper is synchronized with the leading edge of the drum image in the registration roller section, the paper that is transfer printed with the image in the transfer section passes through the fusing section and is discharged either face-down or face-up.

(Vertical paper transport section 1)

A. Major parts and signal functions
Code	Signal name	Name	Function/Operation	Type	Model	Note
⚠ DSKPFC2	DSKPFC2	Paper feed tray 3/4 paper transport clutch 2	Paper transport roller 11 ON/OFF control	Electromagnetic clutch		
⚠ VPM	VPM	Vertical paper transport motor	Drives the paper transport rollers 4 and 13.	Stepping motor		Normal speed mode
MM	MM	Main motor	Drives the paper feed trays 1, 2, 3, and 4, and the manual paper feed section.	DC brushless motor		Paper pass

c	Paper feed tray 1 and 2 left PG unit	O	1	Transport roller 11 (Drive)	XO
d	Vertical transport upper unit	O	1	Transport roller 13 (Drive)	XO
			2	Transport sensor	

a. Left lower cabinet unit

1) Open the left lower cabinet.
2) Remove the resin E-ring, and remove the pressure fulcrum shaft.
3) Remove the left vertical transport PG stopper plate.
4) Open the left door, and remove the left lower cabinet unit.
b. Left vertical transport unit

1) Remove the left lower cabinet unit. (See "a. Left lower cabinet unit")
2) Remove the left vertical transport PG stopper plate.
3) Open the left vertical transport unit, and remove it.
c. Paper feed tray 1 and 2 left PG unit

1) Remove the left lower cabinet. (See "a. Left lower cabinet unit")
2) Remove the left vertical transport unit. (See "b. Left vertical transport unit")
3) Remove the paper feed tray 1 and 2 left PG unit.
c-1. Transport roller 11 (Drive)

1) Remove the paper feed tray 1 and 2 left PG unit. (See "c. Paper feed tray 1 and 2 left PG unit")
2) Remove the E-ring, the drive collar, and the one-way gear.
* Be careful of the installing direction.

3) Remove the E-ring and the bearing, and remove the transport roller 11 (Drive).
d. Vertical transport upper unit

1) Open the left door.
2) Remove the resist roller unit.
3) Disconnect the connector, and remove the vertical transport upper unit.

d-1. Transport roller 13 (Drive)

1) Remove the upper transport fulcrum plate holder, and remove the vertical transport upper open/close PG.

2) Remove the open/close PG earth, and remove the drive connection stopper screw and the bearing.
3) Remove the upper PG holding plate.
4) Remove the vertical transport upper PG.

5) Remove the transport roller 13 (Drive).
d-2. Transport sensor

1) Remove the vertical transport unit. (See "d. Vertical transport upper unit")
2) Check the sensors.

(Vertical paper transport section 2)
A. Major parts and signal functions

Code	Signal name	Name	Function/Operation	Type	Note

a. Paper exit unit

1) Open the left door.
2) Remove the SPF paper exit tray.
3) Remove the top left cabinet.
4) Remove the front left cabinet.
5) Disconnect the connectors.
6) Remove the front fixing bracket.
7) Remove the paper exit unit in the arrowed direction.
a-1. Transport roller 16

1) Remove the paper exit unit. (See "a. Paper exit unit" in this section)
2) Remove the ground plate. Remove the E-ring to remove the pulley.
3) Remove the stopper. Remove the E-ring to remove the bearing.

4) Remove the E-ring to remove the gear.
4) Remove the E-ring to remove the gear.
5) Remove the transport roller in the arrowed direction.

5) Remove the paper exit roller 1 in the arrowed direction.
a-2. Paper exit roller 1

1) Remove the paper exit unit. (See "a. Paper exit unit" in this section)
2) Remove the upper unit.
a-3. Fusing cooling fan motor 1
a-4. Fusing cooling fan motor 3
a-5. Fusing cooling fan motor 4

1) Remove the paper exit unit. (See "a. Paper exit unit" in this section)
2) Remove the upper cover.

3) Remove the stopper. Remove the E-ring to remove the bearing.
3) Remove the fusing cooling fan motor 1 (A), 3 (B), and 4 (C).

⟵ Fan blowing direction
NOTE: When assembling, be careful of the direction of the fan.

a-6. Paper exit temperature sensor

1) Remove the upper cover. (See "a-3. Fusing cooling fan motor 1" in this section)
2) Remove the paper exit temperature sensor.
a-7. Paper exit detector 1

1) Remove the paper exit unit. (See "a. Paper exit unit" in this section)
2) Remove the follower roller unit.
3) Remove the paper exit detection 1 detector.
a-8. Paper exit detector 2

a-9. Paper exit detector 3

1) Remove the paper exit unit. (See "a. Paper exit unit" in this section)
2) Remove the upper cover. (See "a-3. Fusing cooling fan motor 1" in this section)
3) Remove the paper exit detection 2 detector (B) and the paper exit detection 3 detector (A).
a-10. Discharge brush

1) Remove the paper exit unit. (See "a. Paper exit unit" in this section)
2) Remove the discharge brush.

△ * When attaching the discharge brush, fit the edge with the mark line.
(Duplex section)

A. General

When duplex print is selected, paper one surface of which was printed
is switched back to feed to the duplex section to make duplex print.

B. Major parts and signal functions
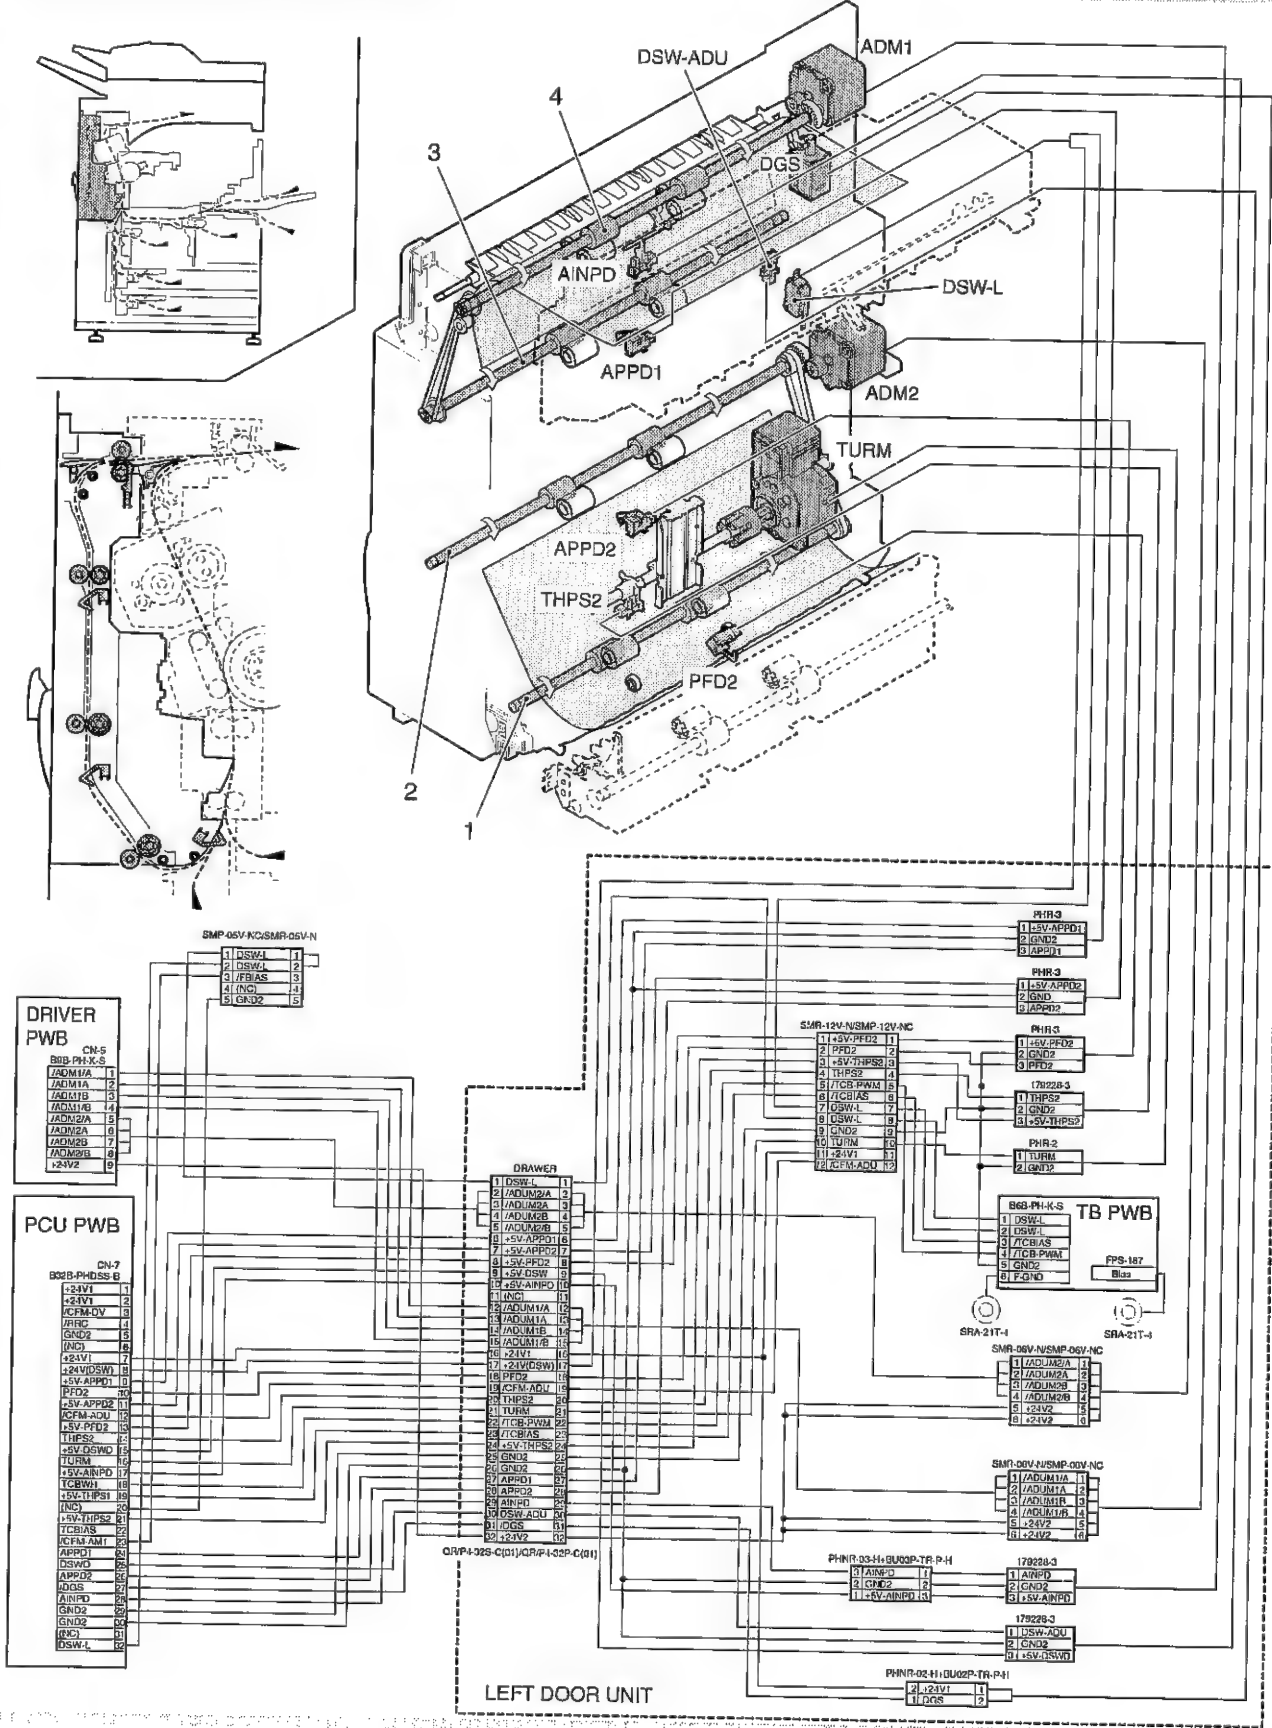

Code	Signal name	Name	Function/Operation	Type	Model	Note
AINPD	AINPD	Duplex (ADU) paper entry detector	Duplex (ADU) paper entry detection, detection of paper exit to finisher	Transmission type		Paper transport system sensor
APPD1	APPD1	Duplex (ADU) paper pass detector 1	Duplex (ADU) upstream paper pass detection	Transmission type		Paper transport system sensor
APPD2	APPD2	Duplex (ADU) paper pass detector 2	Duplex (ADU) midstream paper pass detection	Transmission type		Paper transport system sensor
DSW-ADU	DSW-ADU	Duplex (ADU) cover open/close detector	Duplex (ADU) cover open/close detection	Transmission type		Door switch
⚠ PFD2	PFD2	Paper pass detector 2	Paper pass detection (Left door unit) from duplex (ADU)/Paper feed tray 1, 3, 4	Transmission type		Paper transport system sensor
THPS2	THPS2	Transfer belt contact/separation home position sensor 2	Transfer belt separation home position detection 2	Transmission type		Other sensors, switch
⚠ ADM1	ADM1	Duplex (ADU) motor 1	Drives the paper exit rollers 2 and the paper transport roller 19.	Stepping motor		High speed only
ADM2	ADM2	Duplex (ADU) motor 2	Drives the paper transport roller 20 and 21.	Stepping motor		Selection of Normal speed/ High speed
TURM	TURM	Transfer separation motor	Drives and separates the transfer belt.	DC brush motor		The transfer belt is pressed on the OPC drum only during printing.
DGS	DGS	Paper exit gate solenoid	Drives the paper exit gate.	Electromagnetic solenoid		
DSW-L	DSW-L	Left door open/close detector	Left door open/close detection	Micro switch		Door switch

No.	Name	Function
1	Transport roller 21 (Drive)	Transports paper from the transport roller 20 to the transport roller 15.
2	Transport roller 20 (Drive)	Transports paper from the transport roller 19 to the transport roller 21.
3	Transport roller 19 (Drive)	Transports paper from the transport roller 2 to the transport roller 20.
4	Paper exit roller 1	Discharges paper. / Transports paper to the duplex (ADU) section.

C. Operational descriptions

(1) Paper transport operation in duplex print

a. Switchback operation and transport to the reverse section

1) The paper transported from the fusing section is sent to the paper exit roller 1 (which is driven by the paper exit motor 2 (POM2)) with the transport roller 16 (which is driven by the paper exit motor 1 (POM1)).

    At this time, paper is passed under the paper exit guide. After paper passing, the paper exit gate guide falls down by its own weight.
2) When the specified time has passed from detection of the paper lead edge by POD1 (paper exit detection from fusing), POM2 rotates in the normal direction, then rotates in the reverse direction in the specified time. (The rotation time differs depending on the paper size.)

3) When POM2 rotates reversely, paper is transported to the reverse section.

    At that time, paper is passed over the paper exit gate guide which fell down by it own weight.
4) When the specified time has passed from reverse rotation of POM2, DGS (paper exit guide) turns on for a certain time and paper is sent to the reverse section.
5) POM2 stops after passing the specified time from detection the paper lead edge by AINPD (duplex paper entry detection). It rotation is changed from reverse direction to normal direction to transport the next paper.
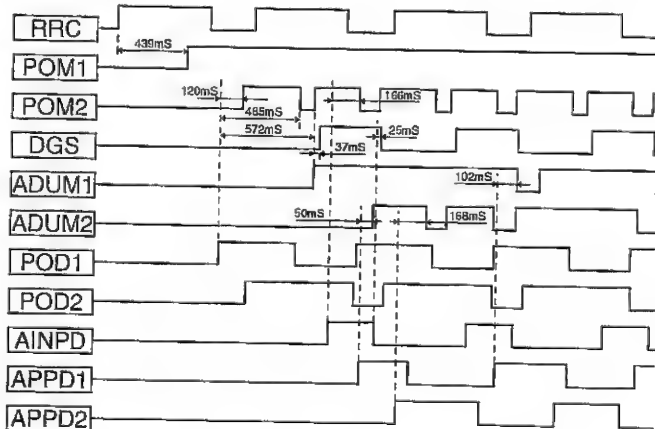

b. Paper transport speed in duplex print

The transport speed in duplex print is changed to the high speed (800mm/sec) to increase the job speed in some positions of paper.

The transport speed is changed to the high speed in the Following positions:

1) From when the paper rear edge passes the fusing section to when switchback operation is started.

2) From when switchback operation is started to when a certain amount of paper is transported after passing APPD1 (Paper pass detection sensor in upstream of duplex).

3) After that, paper is stopped at the duplex paper feed position and fed to the machine again. (The paper feed speed to the machine is 335mm/sec.)

3) Remove the duplex cover open/close detector.

⚠ a-21. Fusing discharge brush

1) Pull out the left door.
2) Remove the fusing discharge brush.

* Attach the fusing discharge brush so that it is fit with the rear end.
⚠ a-22. Reversing discharge brush

1) Pull out the left door.
2) Remove the switchback gate.
3) Remove the reversing discharge burush.
* Attach the reverse discharge brush so that it is fit with the rib inside and the parting line.

3. Laser scan unit (LSU)
A. General

This section performs the following operations.

Image data sent from the MFP (image process circuit) through the mother board and PCU are converted into laser beams to radiate onto the drum surface.

B. Major parts and signal functions
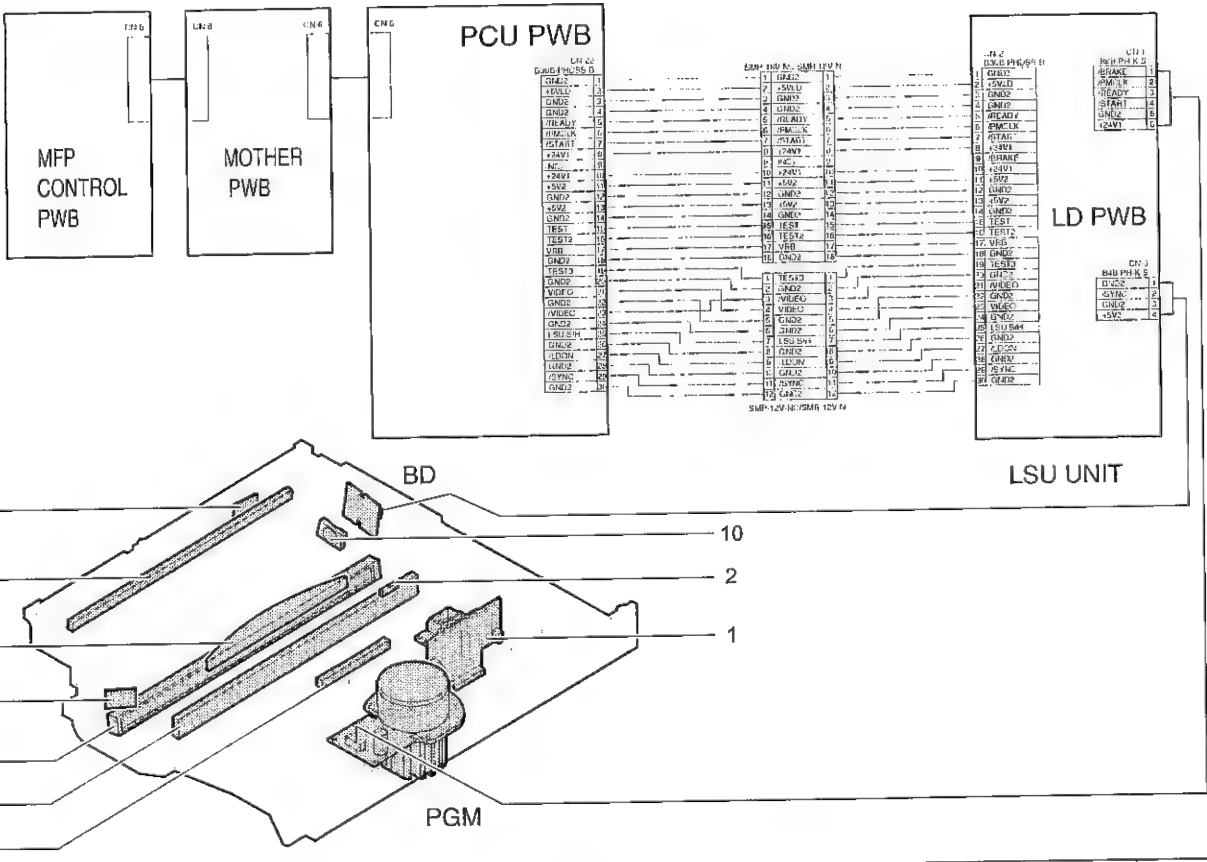

Code	Signal name	Name	Type	Function/Operation	MODEL	NOTE
PGM	PGM	Polygon mirror (motor)		Reflects laser beams at the constant rotation speed.		
BD		BD PWB		Detects the laser scan start timing. This device is used to detect a laser trouble.		

No.	Name	Function
1	Laser control PWB	Controls laser beam flashing and the output value.
2	Cylindrical lens	Converges laser beams to focus.
3	Incidence reflection mirror	Assures the optical path for laser beams.
4	No. 1 mirror	Assures the optical path for laser beams.
5	fθ lens 1	Deflects laser beams so that the laser scan speeds on the both ends of the drum and that at the center of the drum are the same.
6	fθ lens 2	

No.	Name	Function
7	BD PWB	Detects the timing of laser scan start. This device is used to detect a laser trouble.
8	No. 2 mirror	Converges laser beams to focus.
9	Plane lens	Assures the optical path for laser beams.
10	Convergence lens for BD	Converges laser beams onto the BD PWB.

No.	Name	Code, signal name	Function
RW	Control signal	+5VLD	5V power for laser diode
RW	Control signal	/READY	Polygon mirror motor READY signal ("L" in the constant speed rotation)
RW	Control signal	/PMCLK	Clock signal for driving the polygon mirror motor
RW	Control signal	/START	Polygon mirror motor drive start signal
RW	Control signal	/VIDEO	VIDEO (Image signal)
RW	Control signal	/SYNC	Sync signal (SYNC) from BD, sync signal for 1 line

C. Operational descriptions

[Laser optical path]
(2) Outline of LSU specifications

Effective scan width:	297mm
Resolution:	600dpi
Beam diameter:	Main scan = 60 - 85 μm
	Sub scan = 75 - 110 μm
Laser power:	0.385±0.04mW (AR-M550N/U, AR-M620N/U)
	0.480±0.04mW (AR-M700N/U)
LD wave length:	770 - 795nm

* This unit must not be disassembled in the market.

(1) Polygon mirror motor

Model	Number of mirror surfaces	Rotation speed	Bearing	Remark
AR-M550N/U, AR-M620N/U	14 surfaces	34000rpm	AIR	Superior in silence
AR-M700N/U	14 surfaces	40000rpm	AIR	

The number of mirror surfaces and the motor RPM are reduced to reduce noises and increase reliability.

D. Maintenance and parts replacement

(1) Maintenance and parts replacement

(List of Replacement Parts)

No.	Unit	Parts
a	LSU	
a. LSU

1) Pull out the multi paper feed tray, and remove the manual paper feed cover F.
2) Pushing the lower part, remove the right cabinet center.
3) Disconnect the connector, and remove the process cooling fan unit.
4) Disconnect the connectors to remove the LSU unit.
4. Image process section

A. General

Toner is attached to electrostatic latent images formed by the laser beams which were radiated to the OPC drum charged by the main charger, forming toner images.

The toner images formed on the OPC drum are transferred to paper by the transfer belt.
No.	Name	Operation
1	Toner hopper unit, toner bottle unit	Provides toner to the developing unit, and collects waste toner in the front section of the toner bottle unit (waste toner box section).
2	Developer unit	Mixes toner and carrier, and attaches toner to electrostatic latent images to form visible images.
3	Process drum unit	Forms images (electrostatic latent images, visible images) on the OPC drum.
4	Transfer unit	Transfers toner images to the OPC drum.
5	Main charger unit	Charges the OPC drum surface negatively and evenly.

Composition and Applied Voltage of the Process Section
No.	Name	Functions
1	Laser beams	Forms electrostatic latent images on the OPC drum. (Writing resolution: 600dpi) Radiated from the LSU. The output can be set with the simulation. (Basically not changed from the default.)
2	OPC drum	Electrostatic latent images are formed by laser beams. Toner is attracted to the latent electrostatic images and transferred to paper. An OPC drum is employed. The diameter is 80mm.
3	Main charger	Applies a high voltage to charge the OLPC drum. The saw teeth type is employed.
4	Screen grid	Carries electric charges from the main charger to the OPC drum evenly.
5	MG roller	Forms a magnetic brush with developer, and applies toner to the OPC drum. -500V
6	Developing doctor	Keeps the thickness of developer or toner layer on the MG roller at a fixed level.
7	Toner concentration sensor	Detects toner in the developing tank. The transmission type sensor is employed.

No.	Name	Functions
8	Transfer roller	Applies a voltage to transfer toner from the OPC drum to paper.
9	Drum separation pawl	Separates paper from the OPC drum mechanically.
10	Cleaning blade	Cleans and scrapes toner from the OPC drum.
11	Resist roller	Deflects paper to adjust the paper feed timing to the process section.
12	Paper dust cleaner	Remove paper dust from the resist roller to reduce paper dust entry to the process section.
13	Discharge lamp	Discharges residual potential on the OPC drum by the lamp light.

[Toner hopper and toner bottle section]

A. Outline

Adoption of the rotating toner bottle enables large capacity with a compact toner bottle size.

When the remaining toner detection sensor in the toner hopper unit detects no toner, the toner bottle turns to supply toner to the toner hopper. Following supply, since the sensor detects full or empty status inside the toner hopper based on a standard quantity of approximately 150 g of toner, even if the toner cartridge becomes empty, copying is not immediately suspended because toner inside the toner hopper is used (approximately 5K/6% print duty documents).

Destination	Toner filling amount	Life with 6% print duty documents
Except Japan	1,430g/1,650g	72,000 sheets/83,000 sheets
Japan	1,275g	50,000 sheets

B. Major parts and signal functions
TONER HOPPER

Code	Signal name	Name	Function/Operation	Type	Model	Note
TM1X	TM1X	Toner motor 1	Transports toner in the toner hopper to the developing unit. /Transports waste toner to the waste toner section.	Synchronous motor		
TM2X	TM2X	Toner motor 2	Transports toner in the toner bottle to the toner hopper.	Synchronous motor		
TFSD	TFSD	Toner remaining quantity detection signal	Toner hopper remaining quantity detection			
CRUM		CRUM lap	Stores the toner bottle information.			

No.	Name	Operation
1	TH shutter	Serves as a shutter to supply toner from the toner bottle unit to the toner hopper. When a toner bottle unit is installed, the shutter opens.
2	Toner mixing roller	Mixes toner in the toner hopper.
3	Waste toner box drive gear	Drives the waste toner transport parts.
4	Waste toner transport plate	Remains toner evenly in the waste toner box.
5	Waste toner transport plate	Remains toner evenly in the waste toner box.
6	Waste toner shutter	Serves as a shutter to receive waste toner from the process unit.
7	TH shaft	Toner supply roller to the toner unit section.
8	Toner supply roller	Toner supply roller to the developing unit section.

C. Operational descriptions

(1) Composition
The toner cartridge is composed of the toner bottle with toner filled in it, the TB holder lower which holds the toner bottle and to which the CRUM and the waste toner box assembly are attached, and the TG holder upper.

The TB holder lower is attached to the TB shutter. When inserting it to the machine, the toner hopper rib releases the shutter lock pawl, and opens in linkage with the TH shutter. When removing the toner cartridge from the machine, the TB shutter closes.

NOTE: The toner discharge port of the toner bottle is sealed by the heat seal. Do not rotate the toner bottle manually, or the heat seal is dismantled and toner is discharged from the TB shutter port.

(2) Operation
The toner remaining quantity sensor in the toner hopper detects the toner remaining quantity by the toner stirring roller rotation. When there is little toner, the toner bottle rotating motor of the machine is rotated. The toner bottle rotates at 4.2rpm. Toner of about 54g,is supplied to the toner hopper for every rotation. When toner full is not detected after detecting the state with little toner for a certain period (4min), the toner cartridge is judged as empty, and the display to urge toner cartridge replace is shown on the operation panel.

NOTE: When the power is turned on for toner hopper replacement or cleaning, the toner cartridge replacement display is shown though toner is not accumulated enough in the toner hopper. In such a case, turn off/on the power again.

Bias	Bias	Developing bias	High voltage for developing bias			

No.	Name	Operation
1	Developing roller	Forms magnetic brush with developer and put toner on the OPC drum.
2	DV doctor	Keeps the height of the magnetic brush on the developing roller at a fixed level.
3	Mixing roller	Mixes developer (carrier and toner) and charges toner negatively.
4	DV earth plate	Earth plate for DV unit
5	AG roller	Mixes toner supplied from the toner hopper, and supplies toner to the DV box evenly.

C. Operational descriptions

Electrostatic latent images formed on the OPC drum by the LED (writing) unit (LED image light) are converted into visible images by toner.

▲
Toner in the developing unit is stirred by the mixing roller.

When toner is stirred, it is negatively charged by mechanical friction.

The developing bias voltage (negative) is applied to the developing roller.

Negatively charged toner is attracted and attached to the area on the OPC drum where negative voltage is reduced by exposure.

On the other hand, the negative voltage at an area where exposure is not made is higher than the developing bias voltage, and toner is not attached.

1) Take out the developing tank. (See "a. Developing unit" in this section)
2) Take out the old DV seal.
3) Wipe the sealing face with alcohol.
4) Affix the new DV seal at the reference position.

a-3. MG holders F and R

1) Take out the developing tank. (See "a. Developing unit" in this section)
2) Remove the DV cover. (See "a-1. Developer" in this section)
3) Remove the doctor cover.
4) Remove the DV cover front.
5) Remove the bias line and main pole position adjusting plate and screws.
6) Remove the MG gear and screws.
7) Remove the side seals F and R.
8) Remove the MG roller unit.
9) Remove the doctor attaching plate.
10) Remove the MG holders F and R.

a-4. Side Seals F and R

1) Take out the developing tank.
2) Remove the doctor cover.
3) Peel off the right and left side seals.
4) Clean the peeled area.
5) Peel off the new right and left seals from the mounting paper and affix in the designated positions.

a-5. Toner concentration sensor

1) Remove the developing tank. (See "a. Developing unit" in this section)
2) Remove the DV cover. (See "a-1. Developer" in this section)
3) Remove the toner concentration sensor.
[OPC drum section]

A. General

In this section, laser beams are radiated to the OPC drum surface which was negatively charged, making electrostatic latent images.

B. Major parts and signal functions
Code	Signal name	Name	Function/Operation	Type	Model	Note
DMS	DMS	OPC drum marking sensor signal	OPC drum mark detection	Reflection type		Analog detector
PCS	PCS	Image density sensor	Detection of density of toner patch on the OPC drum	Reflection type		Analog detector
TH-CL	TH-CL	OPC drum cleaner temperature sensor	OPC drum cleaner peripheral temperature detection	Thermistor		Analog detector
DM	DM	OPC drum motor	Drives the OPC drum and the transfer section.	DC brushless motor		
PSPS	PSPS	Drum separation pawl solenoid	Drives the OPC drum separation pawl	Solenoid		
DL	DL	Discharge lamp	Discharges electric charges on the OPC drum.	Lamp		

No.	Name	Operation
1	OPC drum	Forms electrostatic latent images by laser beams.
2	Cleaning blade	Cleans remaining toner on the OPC drum.
3	CL brush roller	Cleans remaining toner on the OPC drum.
4	Sub blade (Cleaning seal)	Prevent against toner leakage from the cleaner section.
5	Side seal F, R	Prevents against toner dispersion.
6	Drum separation pawl	Separates paper from the drum.
7	Separation pawl oscillation shaft	Moves in the front and rear frame direction to install the separation pawl.
8	Waste toner transport screw	Transports toner from the cleaner unit to the waste toner transport pipe.
9	Waste toner transport pipe	Transports toner from the cleaner unit to the waste toner box in the toner cartridge front section.

C. Operational descriptions

The OPC drum surface is negatively charged by the main charger. The laser beam images are radiated to the OPC drum surface by the laser unit to form latent electrostatic images.

1) The OPC drum surface is negatively charged by the main charger.
The main charger grid is provided with the screen grid. The OPC drum is charged at a voltage virtually same as the voltage applied to the screen grid.

2) LED lights are radiated to the OPC drum surface by the laser unit to form latent electrostatic images.
When LED lights are radiated to the OPC drum CGL, negative and positive charges are generated.

Positive charges generated in CGL are attracted to the negative charges on the OPC drum surface. On the other hand, negative charges are attracted to the positive charges in the OPC drum aluminum layer.

Therefore, positive charges and negative charges are balanced out on the OPC drum and in the aluminum layer, reducing positive and negative charges to decrease the OPC drum surface voltage.

Electric charges remain at a position where LED lights are not radiated.

As a result, latent electrostatic images are formed on the OPC drum surface.

3) After transfer operation, remaining toner is removed by the cleaning blade.
Toner removed from the OPC drum surface is transported to the waste toner section in the toner cartridge by the waste toner transport screw.

4) The whole surface of the OPC drum is discharged.
By radiating the discharge lamp light to the discharge lens, light is radiated through the lens to the OPC drum surface.

When the discharge lamp light is radiated to the OPC drum CGL, positive and negative charges are generated.

Positive charges generated in CGL are attracted to the negative charges on the OPC drum surface. On the other hand, negative charges are attracted to positive charges in the aluminum layer of the OPC drum.

Therefore, positive and negative charges are balanced out on the OPC drum surface and in the aluminum layer, reducing positive and negative charged to decrease the surface voltage of the OPC drum.

2) Remove the toner receiving seal.
3) Remove the blue screw to remove the lever.
4) Remove the brush roller.

a-7. Process adsorption plate

1) Remove the drum unit.
2) Remove the cover to remove the adsorption plate.
a-8. Drum separation pawl solenoid

1) Disconnect the connector, and remove the harness guide unit.
2) Remove the drum separation pawl solenoid.
a-9. OPC drum cleaner temperature sensor

1) Remove the upper cover.
2) Remove the OPC drum cleaner temperature sensor.
a-10. Discharge lamp

1) Remove the upper cover. (See "a-9. OPC drum cleaner temperature sensor" in this section)
2) Remove the discharge lamp.
* Be careful not to break the pawl when fixing.

a-11. Image density sensor

1) Remove the upper cover. (See "a-9. OPC drum cleaner temperature sensor" in this section)
2) Disconnect the connector.
3) Remove the OPC drum unit. (See "a-1. OPC drum" in this section)
4) Remove the image density sensor.
a-12. OPC drum marking sensor

1) Remove the OPC drum unit. (See "a-1. OPC drum" in this section)
2) Remove the OPC drum marking sensor.

▲ NOTE: Execute cleaning.
[Transfer section]

A. General

In this section, toner images on the OPC drum are transferred to paper.

B. Major parts and signal functions
Code	Signal name	Name	Function/Operation	Type	Note
DM	DM	OPC drum motor	Drives the OPC drum and the transfer section.	DC brushless motor	
TURM	TURM	Transfer separation motor	Drives and separates the transfer belt.	DC brush motor	The transfer belt is pressed on the OPC drum only during printing.
THPS2	THPS2	Transfer belt contact/separation home position sensor 2	Transfer belt separation home position detection 2	Transmission type	Not used.
THV	THV	Transfer high voltage	High voltage for transfer		
HUS-TC	HUS-TC	Process humidity sensor	Process peripheral humidity detection	Humidity sensor	Analog detector (Not used)

No.	Name	Operation
1	Transfer drive roller (Drive)	Drives the transfer belt.
2	Transfer cleaning roller	Cleans the transfer belt.
3	Transfer belt	Transfers toner images from the OPC drum to paper.
4	Transfer tension roller	Applies a proper tension to the transfer belt.
5	Transfer belt discharge brush	Connects the transfer belt to the chassis ground.
6	Transfer roller	Applies a transfer voltage to the transfer belt.
7	Transfer auxiliary roller (Idle)	Helps to stretch the transfer belt.
8	Transfer (TCCL) bias high voltage PWB	Generates a bias voltage for the transfer cleaning roller in cleaning or in the print mode.

C. Operational descriptions

1) Toner image transfer

Toner images formed on the drum by the developing roller are transferred to paper by the transfer belt.

Toner on the drum is negatively charged by stirring in the developing unit. By applying a positive voltage to the transfer roller, the transfer belt and paper on the transfer belt are positively charged to transfer negatively charged toner images to paper.
2) Transfer belt cleaning

During the job, a positive voltage is applied to the transfer cleaning roller so that negatively charged toner on the transfer belt is attracted to the cleaning roller.

(The brush on the back of the transfer belt is provided for increasing the cleaning effect.)
After completion of the job, the applied voltage to the transfer cleaning roller is switched to negative, and toner is returned from the transfer cleaning roller to the transfer belt, and toner on the transfer belt is attracted to the drum and cleaned by the cleaning blade.
Cleaning timing:

- After completion of the job
- When warming-up
- After canceling a jam
- After execution of process control

3) Transfer belt separation/contact

Transfer belt is separated by the transfer separation motor.

The transfer belt is in contact with the drum except for the following cases:

- When executing process control (to prevent against breakage of toner patch on the drum)
- When a jam occurs (Protection of the drum, left door open/close)
- When shipping (Protection of the drum. Separate with the simulation 6-1 (7).)

5. Scanner section
A. General

There are following three methods of scanning documents in this machine.

a. Place a document on the table glass. The copy lamp unit is operated to radiate copy lamp light onto the document, scanning the document with the CCD.

b. The SPF feeds a document. The copy lamp light is radiated onto the document which is stopped at the specified position and the document is scanned by the CCD.

c. The SPF feed a document. The LED light of the CIS unit which is attached to the SPF is radiated to the back of the document, and the document is scanned by the CIS.

11	SPF (CIS) white balance sheet / SPF scan glass		The white reference sheet for scanning with the CIS unit.

C. Operational descriptions

(1) CCD/lens unit

This machine employs the reduction optical-type line CCD (Charge Coupled Device) of scan resolution of 600dpi and 7400 pixels.

CCD scan is performed by shifting the scan positions sequentially by the carriage unit (lamp and mirror) scan or moving the document with the SPF.

Lights reflected by the document are reflected by each mirror to form images on CCD elements through the reduction-type lens. The CCD converts the optical energy into electrical energy (analog). (Photoelectric conversion)

(2) CIS unit

The image sensor which scans back document images is attached to the SPF. The close-contact type image sensor (Contact Image Sensor) with scan resolution of 600dpi and 7196 pixels is employed.

For the CIS to scan documents, the scan position is sequentially shifted by shifting the document by the SPF, and the LED light in the unit is radiated to the back of the document, and photo energy is converted into electric energy (analog signal).
(3) Image signal flow

The image signal converted into electric energy (analog signal) is A-D converted on the CCD PWB. Image processes such as white balance and shading correction are performed on the scanner control PWB. The image signal is then sent through the mother board to the MFP control PWB.

In the MFP control PWB, image process is performed according to the setting content of the operation panel. The image data are converted into laser lighting signals (VIDEO signals), and sent through the mother PWB and the PCU to the LSU (Laser Scan Unit).

In the LSU, the VIDEO signals are converted into laser beams, which are radiated onto the drum.
(4) Carriage (lamp unit) shift (scan) speed

The carriage scan speed depends on the copy magnification ratio.

Speed up to 171% = 220mm/s

Speed of 172% - 400% = 110mm/s

(5) Timing chart

Platen timing chart
SPF duplex timing chart

1) Remove the table glass. (See "a-1. Table glass" in this section)
2) Remove the core guide to shift the optical lamp unit to the base plate cutout section.
3) Remove the front side connector.
4) Turn up the cutout mylar and remove the screw; then shift the lamp holder to the front side and take out the lamp from above on the rear side.
5) Remove the harness connector from the hole on the front side.

a-12. Inverter PWB

1) Remove the table glass. (See "a-1. Table glass" in this section)
2) Remove the core guide.
3) Unhook the claw to remove the plastic members on the rear side.
4) While holding to prevent from falling, remove the screw fixing to remove the inverter PWB.
5) Disconnect the lamp connectors.
6) Release the connector lock on the inverter PWB to remove the FC cable.
7) When attaching, place each harness on the rib.

a-13. CCD lens unit

1) Remove the table glass. (See "a-1. Table glass" in this section)
▲ 2) Remove the harness clamp and the dark box.
3) Mark the lens unit plate position by pen.
4) Release the connector lock on the CCD PWB to remove the FFC cable.
5) Remove the screw to remove the CCD PWB lens unit.
6) Attach the CCD PWB lens unit to the marked position.

a-14. Scanner relay PWB

1) Remove the table glass. (See "a-1. Table glass" in this section)
2) Remove the harness cover B.

▲
3) Disconnect the connector, and remove the scanner interface PWB.

▲
a-15. Scanner motor

1) Remove the rear cabinet.

▲
2) Remove the spring and disconnect the connector.
3) Remove the scanner motor unit.
4) Remove the scanner motor.
a-16. Scanner FLASH PWB

a-17. Scanner control PWB

1) Remove the rear cabinet. (See "a-15. Scanner motor" in this section)

2) Release the lock, and remove the scanner Flash PWB.
3) Remove the clamp, and disconnect the connector.
NOTE: Do not disconnect the PCN harness connector.

4) Remove the scanner control PWB unit.
5) Remove the scanner control PWB.
a-18. SPF open/close detector

1) Remove the rear cabinet. (See "a-15. Scanner motor" in this section)

2) Disconnect the connector, and remove the SPF open/close detector.

⚠ **[Note for handling]**

• When disconnecting the connector, hold the housing section and slide straightly to remove.
a-19. Scanner home position sensor detector

1) Remove the rear cabinet. (See "a-15. Scanner motor" in this section)

2) Remove the SPF harness holder B.
3) Disconnect the connector, and remove the scanner home position sensor.
a-20. Document size detection light emitting PWB

1) Remove the SPF unit. (See "a. SPF unit" in the "7. SPF section")

2) Disconnect the connector and the earth terminal, and remove the upper cabinet rear.
3) Remove the document detection fulcrum TIG, and remove the document detection arm unit.
4) Remove the document detection arm lower, and remove the document detection light emitting unit.
a-21. Document size detection light receiving PWB

1) Remove the operation base plate A.
2) Remove the document size detection light receiving PWB., and disconnect the connector.
▲ [Note for assembly]

• First, connect the harness to the PWB, and check that PWB parts are properly connected. Then attach the PWB to the PWB holder.

6. Fusing section

A. General

This section performs the following functions and operations.

1) Toner attached to paper in the transfer section are heated and pressed onto paper to fuse.

2) The auxiliary heat roller is used to improve fusing capacity and separation capacity after fusing.

B. Major parts and signal functions

■ AR-M550N/U, AR-M620N/U
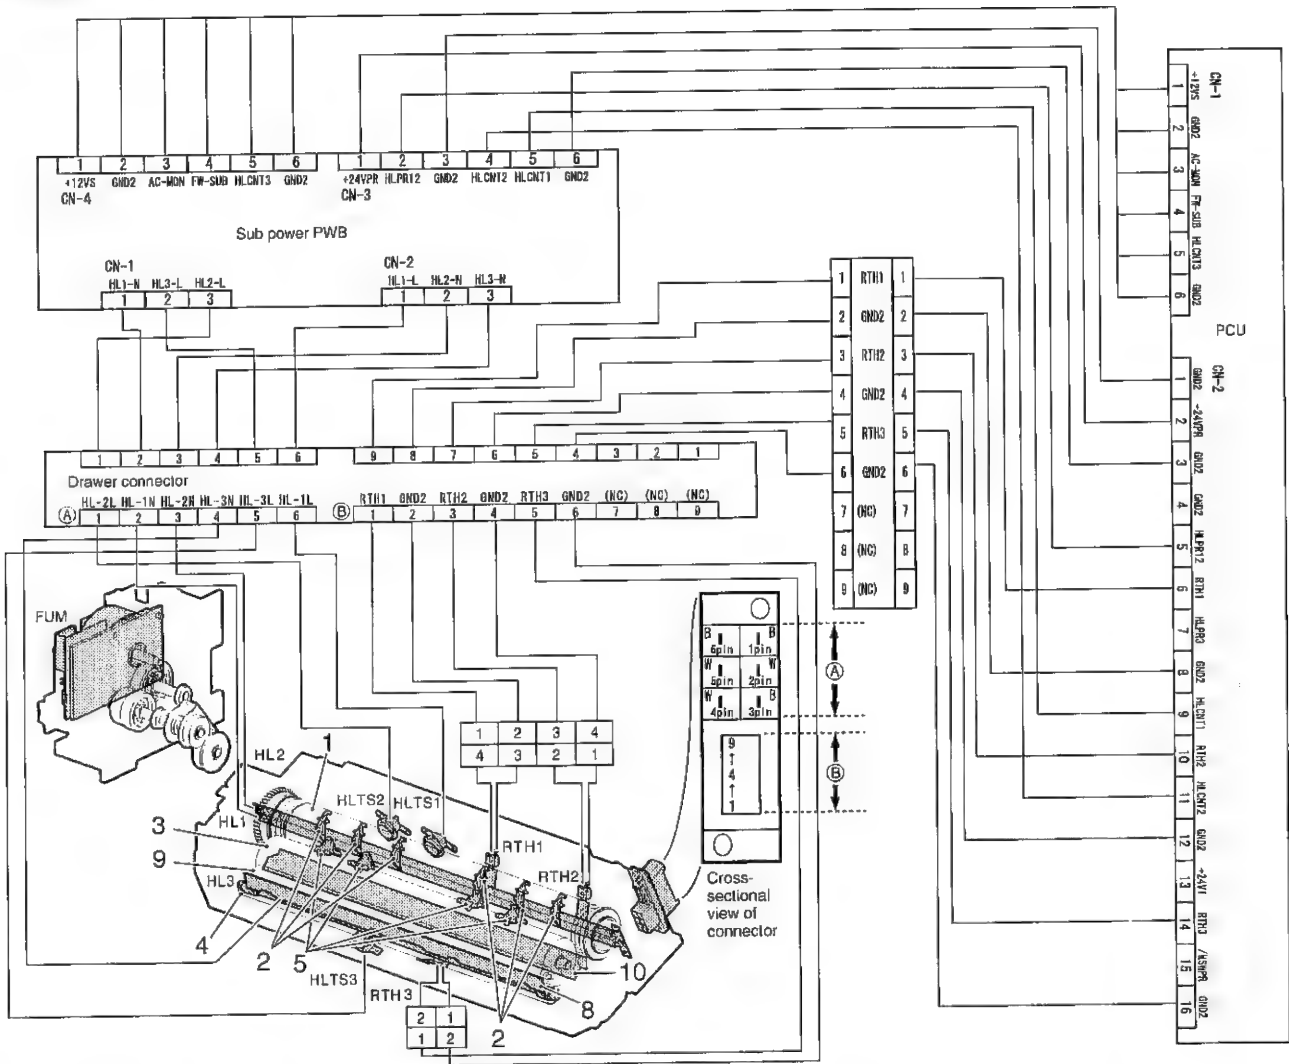

Code	Signal name	Name	Type	Function/Operation	Active condition	Note
RTH1	RTH1	Fusing temperature sensor (1)	Thermistor	Detects the surface temperature of the fusing roller (heating). (Center section)	Analog input	
RTH2	RTH2	Fusing temperature sensor (2)	Thermistor	Detects the surface temperature of the fusing roller (heating). (Edge section)	Analog input	
HLTS1	HLTS1	Thermostat (1)		Shuts conduction to the heater lamp when the temperature rises abnormally. [For the fusing roller (heating)]		
HLTS2	HLTS2	Thermostat (2)		Shuts conduction to the heater lamp when the temperature rises abnormally. [For the fusing roller (heating)]		
HL1	HL1	Heater lamp (1)		Heats the fusing roller (heating).		
HL2	HL2	Heater lamp (2)		Heats the fusing roller (heating).		
RTH3	RTH3	Fusing temperature sensor (3)	Thermistor	Detects the surface temperature of the auxiliary heat roller.		
HLTS3	HLTS3	Thermostat (3)		Shuts conduction to the heater lamp when the temperature rises abnormally. [For the auxiliary heat roller]	Analog input	
HL3	HL3	Heater lamp (3)		Heats the auxiliary heat roller.		
FUM	FUM	Fusing motor		Drives the fusing unit.		

No.	Name	Function/Operation	Active condition	Note
1	Fusing roller (heating)	Heats toner on paper and fuses it on paper.		
2	Separation pawl	Mechanically separates paper which was not separated naturally from the fusing roller (heating).		
3	Fusing roller (pressing)	Heats and presses toner on paper.		
4	Auxiliary heat roller	Heats the fusing roller (pressing).		
5	Separation pawl	Mechanically separates paper which was not separated naturally from the fusing roller (heating).		

No.	Name	Function/Operation	Active condition	Note
7	Fusing cleaning scraper	Cleans the surface of the fusing roller (pressing).		(AR-M550N/U, AR-M620N/U)
8	Cleaning sheet	Clean the sub heat roller surface.		
9	Oil roller	Apply oil to the fusing roller.		(AR-M700N/U)
10	Cleaning plate	Clean the fusing (pressure) roller surface.		(AR-M700N/U)

C. Details of operations

(1) Fusing unit drive

To drive the fusing unit, the drive power is transmitted from the drive motor (FUM) through the connection gear to the upper heat roller gear.

The drive motor DC brushless motor is driven according to the control signal sent from the PCU.

(2) Heater lamp drive

The surface temperature of the heat roller detected by the thermistor is sent to the PCU.

When the temperature is lower than the specified level, the heater lamp lighting signal is sent from the PCU to the heater lamp drive circuit in the sub power PWB.

The power triac in the heater lamp drive circuit is turned on, and the AC power is supplied to the heater lamp, lighting the lamp and heating the heat roller.

To prepare for an abnormally high temperature of the heat roller, the thermostat is provided for safety.

When the thermostat is opened, power supply (AC line) to the heater lamp is cut off.

(3) Fusing operation

Toner on paper is heated and pressed to be fused by the heat roller.
Two heater lamps are provided for the fusing heat roller (heating) and one heater lamp is provided for the auxiliary heat roller for the fusing roller (pressing) to heat paper from above and below.

This is because toner on paper must be heated from above and below to be fused on paper.

⚠ The fusing rollers (pressing) are of silicon rubber because of the following reasons and purpose.

1) Paper is separated upward. (Since the fusing roller (heating) is of higher hardness, the fusing roller (pressing) is deformed to separate paper upward.)

2) The nip quantity is increased to increase heat capacity for paper.

3) By pressing paper with the flexible roller, toner is fused without deformation. (The flatness, however, is not so high.)

(4) Fusing temperature control

The temperature sensor is provided at the center of the fusing roller (heating) and the auxiliary heat roller.

The roller temperature is detected by the installed temperature sensor, and the heater lamp is controlled so that the temperature is maintained at the specified level.

In addition, the fusing temperature is switched according to the kind of paper.

		Fusing roller		Auxiliary heat roller	
Mode	Paper	Inch (U.S.A., Canada)	AB_B (Europe, U.K.) AB_A (Australia)	Inch (U.S.A., Canada)	AB_B (Europe, U.K.) AB_A (Australia)
Ready condition print mode	Normal paper	200°C	205°C	200°C	205°C
	Heavy paper	200°C	205°C	200°C	205°C
	Tab paper	200°C	205°C	200°C	205°C
	Postcard	200°C	205°C	200°C	205°C
Pre-heat	–	170°C	170°C	170°C	170°C

(5) Cleaning operation

The fusing roller removes toner and dusts from the heat roller and the pressure roller surfaces by the following two methods.

1. Sub-heat roller (Heating): Clean the sub heat roller with the cleaning sheet.

2. Fusing roller (Pressing): Mechanical cleaning by the cleaning scraper (the cleaning plate for the AR-M700N/U).

[AR-M550N/U, AR-M620N/U]   [AR-M700N/U]
No.	Name
1	Cleaning sheet
2	Fusing roller (Pressing)
3	Cleaning scraper (AR-M550N/U, AR-M620N/U)
4	Discharge brush
5	Fusing roller (Heating)
6	Sub-heat roller
7	Cleaning plate (AR-M700N/U)
8	Oil roller (AR-M700N/U)

D. Maintenance and parts replacement

■ AR-M550N/U, AR-M620N/U
■ AR-M700N/U
a. Fusing unit

1) Open the left door unit.
2) Remove the blue fixing screw on the front side.
3) Release the fixing members on the rear frame side.
4) Release the right and left lock levers of the fusing unit to remove the fusing unit.

▲ • Caution for handling at a high temperature
(Hold the both sides of the unit.)
• When removing the unit, be careful not to tilt it, and remove slowly. (This is because the unit includes paper dust scraped by the scraper.)

a-1. Heat roller separation pawl

1) Remove the fusing unit. (See "a. Fusing unit" in this section)
2) Remove the heat roller separation pawl unit.

Marks

NOTE: When installing the unit, install to the standard position Ⓐ. (If the picture quality may be degraded damaged by the roller damage, change the installing position to Ⓑ.)

3) Remove the heat roller separation pawl.

a-2. Pressure roller separation pawl

1) Remove the fusing unit. (See "a. Fusing unit" in this section)
2) Open the pressure roller separation pawl unit.

3) Remove the pressure roller separation pawl.

a-3. Heat roller
a-4. Heater lamp 1
a-5. Heater lamp 2
a-6. Heat roller gear
a-7. Thermistor (upper)

1) Remove the fusing unit. (See "a. Fusing unit" in this section)

2) Alternately tighten the screws to release pressure.
NOTE: When tightening the screws and releasing the pressure, do not apply any force to the shaded area. (Otherwise, the PG on the paper entry side may be deformed.)

⚠ 3) Remove the screws to open the fusing unit.
4) Remove the lamp fixing screw.

⚠

Rear side   Front side
- When assembling, tighten the screws in the front side (drawer CN side) and then in the rear side (gear side) in this sequence.
- Check that the screw is securely tightened again. (If the screw is loose, the contact becomes defective to cause an overcurrent and overheating.)

5) Remove the heater lamp 1 and 2.
6) Remove the heat roller unit.
7) Clean the upper thermistor.

⚠ NOTE: Be careful of deformation of the plate spring of the thermistor.
⚠ NOTE: The thermistor position can be changed by shifting the thermistor mounting plate. (If the picture quality may be degraded damaged by the roller damage, change the installing position to Ⓑ .)
8) Remove the ring to remove the gear bearing.
[Caution when Attaching]
- Affix the lamp fixing screw from the opposite side of the drive.
a-8. Pressure roller

1) Remove the fusing unit. (See "a. Fusing unit" in this section)
2) Release the pressure. (See "a-4. Heater lamp 1" in this section)
▲ 3) Remove the screw to open the fusing unit.
4) Remove the fusing roller (pressing) unit.
5) Remove the bearing from the fusing roller (pressing).
[Note for assembly (AR-M550N/U, AR-M620N/U)]

- Wind paper with the scraper tip without scratching the pressure roller, and insert it.
- When inserting, be careful not to deform the scraper.
▲ - When replacing the pressure roller or the scraper, they must be replaced together. (This note should be observed within the maintenance cycle.)
- When assembling the used pressure roller to the original position, set it in the original direction (F-R direction). If it is set in the reverse direction, it may not fit with the scraper, resulting in insufficient cleaning. If, however, the pressure roller and the scraper are replaced together with new one, there is no need to consider this note.
- Engage the bearings F/R with the pressure lever concaves and pull out the paper from the scraper side.
- When closing the unit, first close the upper unit from the above in order to prevent against deform of the scraper.
▲ NOTE: Avoid rattling of the pressure roller and the scraper. If not, the scraper may be deformed and the pressure roller may be damaged.

[Note for installation (AR-M700N/U)]

- When installing the pressure roller to the fusing unit, be careful not to damage the cleaning blade.
If the cleaning plate would be deformed, copy dirt would be resulted.

a-9. Cleaning scraper (AR-M550N/U, AR-M620N/U)

1) Remove the fusing unit. (See "a. Fusing unit" in this section)
2) Open the fusing unit.
3) Remove the pressure roller unit.
4) Remove the fusing cleaning scraper.
[Cleaning]

• Clean and remove paper dust and toner remained in the concave of the scraper holder.
⚠ NOTE:

• When replacing the scraper, replace the whole scraper unit. In addition, when replacing the scraper, the pressure roller must be also replaced.

• Do not remove paper dust from the edge of the scraper. If paper dust is forcibly removed, uneven contact occurs between the pressure roller and the scraper, resulting in insufficient cleaning.

⚠ **a-10. Oil roller (AR-M700N/U)**

a-11. CL roller bearing (AR-M700N/U)

1) Remove the fusing unit. (See "a. Fusing unit" in this section)
2) Open the fusing unit. (See "a-3. Heat roller" in this section)
3) Remove the pressure roller unit. (See "a-8. Pressure roller" in this section)
4) Remove the oil roller unit.
5) Remove the CL roller bearings from the oil roller.
NOTE: When installing the oil roller, set to that "R" mark and "↑" mark are on the rear side of the unit.

NOTE: When handling the oil roller, be careful not to deform or damage the rubber section. When cleaning the oil roller, do not rub forcibly in order not to break the surface tube or the internal rubber.

a-12. Paper guide

1) Remove the fusing unit. (See "a. Fusing unit" in this section)
2) Release the pressure. (See "a-4. Heater lamp 1" in this section)
⚠ 3) Remove the screw to open the fusing unit.
4) Clean the paper guide.
⚠ **a-13. Cleaning plate (AR-M700N/U)**

1) Remove the fusing unit. (See "a. Fusing unit" in this section)
2) Open the fusing unit. (See "a-3. Heat roller" in this section)
3) Remove the pressure roller unit. (See "a-8. Pressure roller" in this section)
4) Remove the paper guide.
NOTE:

• Tighten the screws in the sequence shown above.
• Do not allow clearance at the center of the paper guide.
• If copy dirt is heavy, replace it.
• Clean and remove paper dust from the cleaning roller plate and its surrounding.
• Do not remove toner and paper dust from the mesh section of the cleaning plate. If they are removed forcibly, the cleaning plate may be deformed, resulting in insufficient cleaning.

5) Remove the cleaning roller plate.
[Note for installation]

• Be careful not to deform the cleaning plate. If the cleaning plate would be deformed, insufficient cleaning would be resulted.

a-14. Sub heat roller

a-15. Sub heat roller bearing

a-16. Thermistor (lower)

a-17. Sub heater lamp

1) Remove the fusing unit. (See "a. Fusing unit" in this section)
2) Release the pressure. (See "a-4. Heater lamp 1" in this section)
3) Lay the unit on its side to prevent paper dust from dispersing, and remove the lower cover.
4) Clean paper dust.
5) Remove the spring.
6) Remove the thermostat terminals.

7) Remove the thermistor.

NOTE: If the picture quality may be degraded damaged by the roller damage, change the installing position to Ⓑ.
8) Remove the sub heat roller unit.
9) Remove the lamp fixture.
10) Remove the sub heater lamp.
11) Remove the ring, and remove the second heater roller bearing and the second heater roller.
a-18. Thermostat 1

a-19. Thermostat 2

1) Remove the fusing unit. (See "a. Fusing unit" in this section)
2) Remove the thermostat 1 (A) and the thermostat 2 (B).
[Cleaning]

When there is paper dust or foreign material on the heat sensitive surface of the thermostat, clean and remove dust or foreign material.

NOTE: Be careful not to mistake the install position of the washer.

a-20. Thermistor 3

1) Remove the fusing unit. (See "a. Fusing unit" in this section)
2) Remove the heating unit.
3) Remove the thermostat 3.
[Cleaning]

When there is paper dust or foreign material on the heat sensitive surface of the thermostat, clean and remove dust or foreign material.

NOTE: Be careful not to mistake the install position of the washer.

⚠ a-21. Discharge brush

a-22. Cleaning sheet

1) Remove the fusing unit. (See "a. Fusing unit" in this section)
2) Lay the unit on its side to prevent paper dust from dispersing, and remove the lower cover. (See "a-14. Sub heat roller" in this section)
3) Clean paper dust. (See "a-14. Sub heat roller" in this section)
4) Remove the second heating roller cleaning holding plate.
NOTE: When there are paper dusts or foreign materials at the port area (A), clean and remove.

5) Do not lay the unit with the discharge brush on the lower side.
NOTE: Clean and remove paper dust. (Be careful not to deform the brush.)

6) Remove the cleaning sheet.
   - If the roller is cooled down, toner may be hardened to prevent removing.
   - Since cleaning is performed by applying a pressure by the spring, be careful not to deform it.
   - If copy dirt is heavy, replace the cleaning sheet with a new one.
(CAUTION) Note for assembly of the fusing unit

⚠ Check that the harnesses on the hinge section (F frame side and R frame side) which connects the upper and the lower frames are in the normal state as shown below.
   - If the harness on the F side extends out from the frame, repair it correctly.
   - Arrange wiring as shown above so that the harness slack on the rear side does not extend to the gear side or dose not come too closely to the gear.

7. SPF section
A. General

Sheet documents are automatically fed and transported for continuous scanning.

The front and the back surfaces of duplex sheet documents can be scanned at a time.

No.	Name	Function
1	Document tray	Paper feed tray for documents. Max. loading capacity of documents: 150 sheets (80g/m²) or 19.5mm or less
2	Pickup roller	Picks up a document and transports it to the document feed roller.
3	Document feed roller	Feeds documents.
4	Separation roller	Separates paper to prevent against double feed.
5	No. 1 resist roller	Performs document feed resist.
6	Transport roller 1 (Drive)	Transports documents.
7	Transport roller 2 (Drive)	Transports documents.
8	No. 2 resist roller	Makes synchronization between the document lead edge and the scan start position.
9	Paper exit roller (Drive)	Discharges documents.
10	CIS unit	Scans the back surface of a document.

B. Operational descriptions

(1) Timing chart

To increase the document replacement speed, preliminary feed is performed for the second and the following documents when two or more documents of A4/Letter size or smaller are scanned.

For this purpose, each transport roller is provided with a clutch to perform independent control.

In addition, an electromagnetic brake is employed for each transport roller because it reduces the motor load when compared with the mechanical brake.

STLD	STLD	SPF document tray lower limit detector	SPF document tray lower limit detection	Transmission type		Sensor
/SLUMB	/SLUMB	SPF paper tray lift motor	Lifts up and down the SPF paper feed tray.	Stepping motor		

B. Operational descriptions

(1) Document tray lift operation

When a job is started, the document tray is lifted until a document at the top in the document tray turns on the document upper limit sensor (STUD).

The pressure between the document at the top in the document tray and the take-up roller is maintained at a constant level to improve the paper feed capability.

When paper to be scanned is exhausted, the document empty sensor (SPED1) turns off and the document tray moves down automatically until the lower limit sensor detects it.

Up and down movements of the document tray are performed by the lift motor (normal rotation, reverse rotation) and the lift gear.

B. Operational descriptions

(1) Document feed, transport, scan, paper exit, and operating speed

The document fed by the take-up roller is sent through the paper feed roller and the transport roller to the resist roller section.

In the resist roller section, the document lead edge and the scan start position are synchronized. The document is transported to the scan section. After being scanned, the document discharged to the document exit tray by the paper exit roller.

The document transport speed varies depending on the scan mode and the scan magnification ratio as shown below.

Scan mode	Magnification ratio	Document transport speed
Single surface scan	Up to 117%	360mm/sec
Single surface scan	118% or above	220mm/sec
Duplex scan	Up to 100%	220mm/sec
Duplex scan	101% or above	110mm/sec

Code	Signal name	Name	Function/Operation	Type	Note
CIS	CIS	CIS control PWB/CIS unit	Scans document images (back surface) and controls the CIS unit.		

B. Operational descriptions

(1) Document scan

CIS unit: The CIS (Contact Image Sensor) unit is the contact type image scan sensor, and is assembled to the SPF to scan document images.

The LED light in the CIS unit is radiated to a document, and the reflected light is passed through the lens to the photo-electric conversion elements to form images.

(Pixel: 7196 pixels, resolution: 600dpi)

The CIS and the CCD assembled in the lens unit allow simultaneous scan of duplex surfaces of a document.

▲ * If the left door is completely pulled out, the unit may drop off. Be careful to avoid it.

* Remove the screw which was indicated with the arrow mark.

a-1. Vertical paper transport motor

1) Remove the 1/2 paper feed drive unit. (See "a. 1/2 paper feed drive unit" in this section)

2) Loosen the screw to release the tension, and remove the belt.
3) Remove the parts.
▲ * Attach the spring to the longer shaft.

4) Remove the 1/2 paper feed drive frame lower. Remove the harness clamp.
5) Disconnect the connector, and remove the vertical paper transport motor.
⚠ a-2. Paper feed tray 3/4 paper transport clutch 2

1) Remove the 1/2 paper feed drive unit. (See "a. 1/2 paper feed drive unit" in this section)

2) Remove the 1/2 paper feed drive frame lower. (See "a-1. Vertical paper transport motor" in this section)

3) Disconnect the connector and remove the harness clamp, and remove the paper feed tray 3/4 paper transport clutch 2.
4) Remove the E-ring, and remove the paper feed tray 3/4 paper transport clutch 2.
⚠ a-3. Paper feed clutch (Paper feed tray 1)

1) Remove the 1/2 paper feed drive unit. (See "a. 1/2 paper feed drive unit" in this section)

2) Remove the 1/2 paper feed drive frame lower. (See "a-1. Vertical paper transport motor" in this section)

3) Disconnect the connector and remove the harness clamp, and remove the paper feed clutch (paper feed tray 1) unit.
4) Remove the E-ring, and remove the paper feed clutch (paper feed tray 1).
a-4. Horizontal paper transport clutch

1) Remove the 1/2 paper feed drive unit. (See "a. 1/2 paper feed drive unit" in this section)

2) Remove the 1/2 paper feed drive frame lower. (See "a-1. Vertical paper transport motor" in this section)

3) Disconnect the connector and remove the harness clamp, and remove the horizontal paper transport clutch.
4) Remove the E-ring, and remove the horizontal paper transport clutch.
a-5. Paper feed clutch (Paper feed tray 2)

1) Remove the 1/2 paper feed drive unit. (See "a. 1/2 paper feed drive unit" in this section)
2) Remove the 1/2 paper feed drive frame lower. (See "a-1. Vertical paper transport motor" in this section)
3) Disconnect the connector and remove the harness clamp, and remove the paper feed clutch (paper feed tray 2).
4) Remove the E-ring, and remove the paper feed clutch (paper feed tray 2).
a-6. Paper pickup solenoid (Paper feed tray 2)

1) Remove the 1/2 paper feed drive unit. (See "a. 1/2 paper feed drive unit" in this section)
2) Remove the 1/2 paper feed drive frame lower. (See "a-1. Vertical paper transport motor" in this section)
3) Remove the paper pickup solenoid unit.
4) Remove the paper pickup solenoid.
* When installing, check that the solenoid plunger is inserted in the arm.

b-1. Remove the paper tray lift-up motor (paper feed tray 1)

1) Remove the rear cabinet.
2) Remove the plastic E-ring, the belt holding sheet, the belt, and the pulley.
* When installing, be careful of the direction of the belt holding sheet.

3) Disconnect the connector, and remove the lift-up motor unit.
4) Release the pawl, and remove the lift-up coupling. Remove the lift-up spring from the paper tray lift-up motor.
b-2. Paper tray lift-up motor (Paper feed tray 2)

1) Remove the high voltage PWB unit. (See "a. Manual paper feed drive unit" in the "[Manual paper feed drive section]")
2) Disconnect the connector, and remove the lift-up motor unit.
3) Release the pawl, and remove the lift-up coupling. Remove the lift-up spring from the lift-up motor.
b-3. Paper pickup solenoid (Paper feed tray 2)

1) Remove the high voltage PWB unit. (See "a. Manual paper feed drive unit" in the "[Manual paper feed drive section]")
2) Disconnect the connector, and remove the paper pickup solenoid unit.
3) Remove the paper pickup solenoid.
* When installing, check that the solenoid plunger is inserted in the arm.

[3/4 paper feed drive section]

(Replacement parts)

No.	Unit		Parts
a	3/4 paper feed drive unit	1	Paper feed clutch (Paper feed tray 3)
		2	Paper feed clutch (Paper feed tray 4)
		3	Paper feed tray 3/4 paper transport clutch 1
b	Other	1	Paper tray lift-up motor (Paper feed tray 3)
		2	Paper tray lift-up motor (Paper feed tray 4)
a. 3/4 paper feed drive unit

1) Remove the paper tray lift-up motor. (See "b-1. Paper tray lift-up motor (Paper feed tray 3)" in this section)
2) Remove the parts and remove the drive joint plate.
* When installing, be careful of the direction of the belt holding sheet.
* When installing, temporarily fix the 1/2 paper feed drive unit to the main unit, and install the drive joint plate. Then tighten the screw of the drive unit securely.
3) Remove the external outfit mounting plate.
4) Disconnect the connector and remove the harness clamp. Remove the 3/4 paper feed drive unit.
* Remove the screw which was indicated with the arrow mark.

a-1. Paper feed clutch (Paper feed tray 3)

1) Remove the 3/4 paper feed drive unit. (See "a. 3/4 paper feed drive unit" in this section)

2) Remove the E-ring and remove the parts.
3) Remove the 3/4 drive frame lower.
4) Disconnect the connector, and remove the paper feed clutch unit.
5) Remove the E-ring, and remove the paper feed clutch.
a-2. Paper feed clutch (Paper feed tray 4)

1) Remove the 3/4 paper feed drive unit. (See "a. 3/4 paper feed drive unit" in this section)

2) Remove the 3/4 drive frame lower. (See "a-1. Paper feed clutch (Paper feed tray 3)" in this section)

3) Disconnect the connector, and remove the paper feed clutch unit.
4) Remove the E-ring, and remove the paper feed clutch.
a-3. Paper feed tray 3/4 paper transport clutch 1

1) Remove the 3/4 paper feed drive unit. (See "a. 3/4 paper feed drive unit" in this section)

2) Remove the parts, and remove the belt.
3) Remove the 3/4 drive frame lower. (See "a-1. Paper feed clutch (Paper feed tray 3)" in this section)

4) Disconnect the connector, and remove the paper feed tray 3/4 paper transport clutch 1 unit.
5) Remove the E-ring, and remove the paper feed tray 3/4 and the paper transport clutch 1.
b-1. Paper tray lift-up motor (Paper feed tray 3)

b-2. Paper tray lift-up motor (Paper feed tray 4)

1) Remove the rear cabinet.
2) Disconnect the connector, and remove the paper tray lift-up motor (paper feed tray 3) (A) and the paper tray lift-up motor (Paper feed tray 4) (B).
3) Release the pawl, and remove the lift-up coupling. Remove the lift-up spring from the lift-up motor.

(2) Maintenance and parts replacement

(Replacement parts)

No.		Parts
a	1	Ozone filter
	2	DV ozone filter
	3	Toner filter
a-1. Ozone filter

1) Remove the rear cabinet.
2) Release the pawl, and remove the ozone filter.
⚠ **a-2. DV ozone filter**

a-3. Toner filter

1) Remove the rear cabinet. (See "a-1. Ozone filter" in this section)
2) Remove the DV filter box.
⚠ 3) Remove the DV ozone filer (A) and the toner filter (B)
10. PWB section

A. Maintenance and parts replacement

(2) Maintenance and parts replacement

(Replacement parts)

No.		Parts
a	1	PCU FLASH PWB
	2	PCU PWB
	3	Driver PWB
	4	Mother PWB
	5	Controller cooling fan motor
	6	HDD cooling fan motor
	7	HDD
	8	Soft NIC PWB
	9	MFP FLASH ROM PWB
	10	MFP controller PWB
a-1. PCU FLASH PWB

1) Remove the ROM cover. Release the lock and remove the PCU Flash PWB.
a-2. PCU PWB

1) Remove the rear cabinet.
2) Disconnect the connector, and remove the PCU PWB.
a-3. Driver PWB

1) Remove the rear cabinet and the rear cabinet upper.
2) Disconnect the connector, and remove the harness clamp and the SCAN harness cover.
3) Remove the connector and the harness clamp. Remove the driver PWB unit.
4) Remove the driver PWB.
a-4. Mother PWB

1) Remove the driver PWB unit. (See "a-3. Driver PWB" in this section)

2) Remove the harness, and remove the mother PWB stay.
3) Disconnect the connector and remove the mother PWB unit.
4) Remove the mother PWB.
a-5. Controller cooling fan motor

1) Remove the driver PWB unit. (See "a-3. Driver PWB" in this section)

2) Disconnect the connector and remove the harness clamp. Remove the controller cooling fan motor unit.
3) Remove the controller cooling fan motor.
a-6. HDD cooling fan motor

1) Remove the rear cabinet and the rear cabinet upper. (See "a-3. Driver PWB" in this section)

2) Disconnect the connector, and remove the harness clamp. Remove the HDD cooling fan motor unit.
3) Disconnect the connector, and remove the HDD cooling fan motor.
a-7. HDD

1) Remove the cooling fan motor unit. (See "a-5. Controller cooling fan motor" in this section)

2) Disconnect the connector, and remove the HDD unit.
3) Remove the HDD slide plate, and remove the HDD mounting plate from the HDD.
a-8. Soft NIC PWB

1) Remove the right cabinet upper.
2) Pull out the NIC control unit.
3) Remove the soft NIC PWB unit.
4) Remove the soft NIC PWB angle from the soft NIC PWB.
a-9. MFP FLASH ROM PWB

1) Pull out the NIC control unit. (See "a-8. Soft NIC PWB" in this section)

2) Release the lock, and remove the MFP Flash PWB.
a-10. MFP controller PWB

1) Remove the manual feed cover F, the right cabinet middle, and the right cabinet upper. (See "a-8. Soft NIC PWB" in this section)

2) Pull out the NIC control unit, and remove the flat cable. Release the lock, and remove the NIC control unit.
3) Remove the Soft NIC PWB unit.
4) Remove the PWB protection plate. Remove the MFP controller PWB.
11. Power section

A. Maintenance and parts replacement

(1) Maintenance and parts replacement

(Replacement parts)

No.	Unit		Parts
a		1	AC power PWB
		2	DC main power PWB
		3	Power cooling fan motor 1
		4	Power cooling fan motor 2
		5	Dehumidifier heater relay PWB
		6	DC sub power PWB
		7	High voltage PWB (MC/DV/TC)
a-1. AC power PWB

1) Remove the rear cabinet.
2) Disconnect the connector, and remove the AC power PWB.
a-2. DC main power PWB

⚠ **(Method 1)**

1) Remove the rear cabinet. (See "a-1. AC power PWB" in this section)

⚠ 2) Disconnect the connector and remove the harness clamp. Remove the AC power PWB unit.
3) Disconnect the connector and remove the DC main power PWB.
⚠ **(Method 2)**

1) Remove the rear cabinet. (See "a-1. AC power PWB" in this section)

2) Disconnect the connector.
▲ 3) Remove the AC/DC power unit.
4) Remove the AC power PWB unit.
5) Remove the DC power PWB unit.
a-3. Power cooling fan motor 1

a-4. Power cooling fan motor 2

1) Remove the rear cabinet. (See "a-1. AC power PWB" in this section)

2) Disconnect the connector, and remove the AC power PWB unit.(See "a-1. AC power PWB" in this section)

3) Disconnect the connector and remove the harness clamp. Remove the power cooling fan motors 1/2.
NOTE: When assembling, fit the mark with the fan rotating direction (label on the back surface).

a-5. Dehumidifier heater relay PWB

1) Remove the rear cabinet. (See "a-1. AC power PWB" in this section)

2) Disconnect the connector and remove the supporter. Remove the dehumidifier heater relay PWB.
a-6. DC sub power PWB

1) Remove the paper exit tray cabinet.
2) Disconnect the connector and remove the supporter. Remove the DC sub power PWB.
a-7. High voltage PWB (MC/DV/TC)

1) Remove the rear cabinet. (See "a-1. AC power PWB" in this section)

2) Disconnect the connector and remove the earth terminal. Remove the high voltage PWB.
12. Fan motors

A. Maintenance and parts replacement

(1) Maintenance and parts replacement

(Replacement parts)

No.	Unit		Parts
a		1	Developing cooling fan motor
		2	Paper cooling fan motor 2
		3	Fusing cooling fan motor 2
		4	Process exhaust fan motor 5
		5	Process exhaust fan motor 4
		6	Process exhaust fan motor 1
		7	Process exhaust fan motor 2
		8	Process exhaust fan motor 3
		9	Process cooling fan 1
		10	Process cooling fan 2
		11	Process cooling fan 3
a-1. Developing cooling fan motor

1) Remove the rear cabinet.
2) Disconnect the connector and remove the harness clamp. Remove the DV fan unit.
3) Disconnect the connector, and remove the DV fan.

⟵ Fan blowing direction
a-2. Paper cooling fan motor 2

1) Remove the rear cabinet and the rear cabinet upper.
2) Disconnect the connector, and remove the paper cooling fan motor.

Fan blowing direction
NOTE: When installing, arrange so that the arrow mark on the side of the duct faces in the same direction with the arrow mark on the side of the fan.

a-3. Fusing cooling fan motor 2

1) Remove the rear cabinet. (See "a-1. Developing cooling fan motor" in this section)

2) Remove the tray.
3) Remove the left cover cabinet.
4) Open the left door.
5) Remove the left cabinet upper.
6) Disconnect the connector, and remove the paper exit rear duct unit.
7) Disconnect the connector, and remove the fusing cooling fan motor.

NOTE: Be careful of the direction of the fan.
a-4. Process exhaust fan motor 5

1) Remove the rear cabinet. (See "a-1. Developing cooling fan motor" in this section)

2) Disconnect the connector and remove the harness clamp. Remove the sub duct unit.

3) Disconnect the connector and remove the process exhaust fan motor 5.

NOTE: Be careful of the direction of the fan.
a-5. Process exhaust fan motor 4

1) Remove the rear cabinet. (See "a-1. Developing cooling fan motor" in this section)

2) Disconnect the connector and remove the harness clamp. Remove the sub duct unit. (See "a-4. Process exhaust fan motor 5" in this section)

3) Disconnect the connector and remove the process exhaust fan motor 4.

NOTE: When assembling, fit the mark with the fan rotating direction (label on the back surface).
a-6. Process exhaust fan motor 1

a-7. Process exhaust fan motor 2

a-8. Process exhaust fan motor 3

1) Remove the SPF unit. (See "6. Fusing section" in the "a. SPF unit")

2) Remove the scanner unit. (See "a. Scanner unit" in the "5. Scanner section")

3) Pull out the multi paper feed tray unit, and remove the manual paper feed cover F.
4) Remove the right cabinet middle.
5) Remove the right cabinet upper.
6) Remove the front cabinet band, and remove the3 front cabinet.
7) Remove the toner bottle. (See "a. Toner bottle unit" in "[Toner hopper and toner bottle section]")

8) Remove the toner hopper unit. (See "b. Toner hopper unit" in "[Toner hopper and toner bottle section]")

9) Remove the developing unit. (See "a. Developing unit" in the "[Developer tank section]")

10) Remove the process unit. (See "a. Process unit" in the "[OPC drum section]")

11) Raise the process DV cover diagonally, and remove the front right cover.
12) Remove the front cabinet upper.
13) Remove the paper exit tray cabinet unit.
14) Remove the paper exit port cabinet, and remove the paper exit tray cabinet C.
15) Disconnect the connector and remove the harness clamp. Remove the main duct unit.

⚠
16) Remove the fan unit.
17) Disconnect the connector and remove the process exhaust fan motor 1 (A), 2 (A), and 3 (C).
⚠

⟨⟩ --- Fan blowing direction

NOTE: When assembling, fit the mark with the fan rotating direction (label on the back surface).

: Feb. 6 2004

a-9. Process cooling fan motor 1 (LSU, process section)

a-10. Process cooling fan motor 2 (LSU, process section)

a-11. Process cooling fan motor 3 (LSU, process section)

1) Pull out the multi paper feed tray, and remove the manual paper feed cover F.
2) Pushing the lower part, remove the right cabinet center.
3) Disconnect the connector, and remove the process cooling fan unit.
4) Disconnect the connector, and remove the process cooling fan motors 1 (A), 2 (B), and 3 (C).

NOTE: When assembling, fit the mark with the fan rotating direction (label on the back surface).
13. Sensors and switches

A. Parts replacement

(1) Parts replacement

(Replacement parts)

No.	Unit		Parts
a		1	Power switch
		2	Main power switch
		3	Front door open/close detector
		4	Left door open/close detector
		5	Dry heater switch
		6	Machine temperature sensor
a-1. Power switch

a-2. Main power switch

a-3. Front door open/close detector

1) Remove the front cabinet band, and remove the3 front cabinet.
2) Remove the toner bottle. (See "a. Toner bottle unit" in "[Toner hopper and toner bottle section]")

3) Remove the toner hopper unit. (See "b. Toner hopper unit" in "[Toner hopper and toner bottle section]"

4) Remove the developing unit. (See "a. Developing unit" in the "[Developer tank section]")

5) Remove the process unit. (See "a. Process unit" in the "[OPC drum section]")

6) Raise the process DV cover diagonally, and remove the front right cover.
7) Disconnect the connector, and remove the power switch.
NOTE: When installing, be careful of the connector connecting position and the installing direction. Also be careful not to break the SW pawl.
[Connector connecting position]

	Connector color	Line color
1	Yellow	Black
2	White	Black
3	Blue	Black
4	White	Red
5	White	Brown
6	Yellow	White
7	White	White
8	Blue	White

Power switch (Connector surface)

8) Disconnect the connector, and remove the main power switch unit.
NOTE: When installing, be careful of the connector connecting position and the installing direction. Also be careful not to break the SW pawl.
[Connector connecting position]

	Connector color	Line color
1	White	Black
2	Black	Black
3	White	White
4	Black	White

Main power switch (Connector surface)

9) Remove the main power switch.
10) Remove the counter mounting plate.
11) Disconnect the connector and remove the front door open/close switch unit.
a-4. Left door open/close detector

1) Open the left door.
2) Remove the left front cabinet
3) Disconnect the connector, and remove the left door open/close detector unit. Remove the left door open/close detector.
a-5. Dry heater switch

1) Remove the rear cabinet.
2) Disconnect the connector, and remove the dry heater switch.
⚠ a-6. Machine temperature sensor

1) Pull out the multi paper feed tray, and remove the manual paper feed cover F.
2) Pushing the lower part, remove the right cabinet center.
3) Disconnect the connector, release the pawl, and remove the machine temperature sensor.
[7] SETTING AND ADJUSTMENTS

Each adjustment item in the adjustment item list is associated with a specific JOB number. Perform the adjustment procedures in the sequence of Job numbers from the smallest to the greatest.

However, there is no need to perform all the adjustment items. Perform only the necessary adjustments according to the need.

Unnecessary adjustments can be omitted. Even in this case, however, the sequence from the smallest to the greatest JOB number must be observed.

If the above precaution should be neglected, the adjustment would not complete normally or trouble may occur.

Job No		Adjustment item list		Simulation
ADJ 1	Adjusting high voltage values	ADJ 1A	Adjust the main charger grid voltage	8-2
		ADJ 1B	Adjust the developing bias voltage	8-1
		ADJ 1C	Adjust the transfer current	8-6, 8-17, 8-18
ADJ 2	Adjusting the developing unit	ADJ 2A	Adjust the developing doctor gap	
		ADJ 2B	Adjust the developing roller main pole	
ADJ 3	Adjusting image distortions	ADJ 3A	Adjust print image distortions (LSU parallelism adjustment)	64-1
		ADJ 3B	Adjust the scanner (reading) unit parallelism	
		ADJ 3C	Adjust scanned image distortions in the sub-scanning direction	
		ADJ 3D	Adjust scanned image distortions in the main scanning direction - 1

		ADJ 14C	Adjust the paper width sensor for the SPF paper feed tray	53-6
ADJ 15	Adjusting the original size detection (In original table mode)	ADJ 15A	Adjust the detection point of the original size sensor (in original table mode)	41-1
		ADJ 15B	Adjust the sensitivity of the original size sensor	41-2
ADJ16	Adjusting the touch panel coordinates			65-1
ADJ17	Adjusting the supply voltage			

ADJ 1 Adjusting high voltage values

Note: Adjusting the output voltage requires the ability to measure internal impedance of 1000 MW.

ADJ 1A Adjust the main charger grid voltage

This adjustment is needed in the following situations:

- The high voltage power PWB (MC/DV/TC) has been replaced.
- U2 trouble has occurred.
- The PCU PWB has been replaced.
- The EEPROM of the PCU PWB has been replaced.

(Main charger grid voltage adjustment)

Item/operation mode		Simulation		Setting range	Default	High voltage power PWB (MC/DV/TC)		
						Connector	Pin #	Actual voltage
Copy	Auto mode	8-2	AUTO	200 – 1000	580	CN2	3	–590±2v
	Text mode		CHARACTER	200 – 1000	580	CN2	3	–590±2v
	Text/photo mode		MIX	200 – 1000	580	CN2	3	–590±2v
	Photo mode		PHOTO	200 – 1000	580	CN2	3	–590±2v
Printer	All modes		PRINTER	200 – 1000	580	CN2	3	–590±2v
FAX	All modes		FAX	200 – 1000	580	CN2	3	–590±2v

1) Remove the rear cover of the machine.

⚠ 2) Apply a digital multi-meter to the connector CN2 pin (3) of the high voltage PWB and the chassis GND.

3) Go through the modes specified in Simulation 8-2.
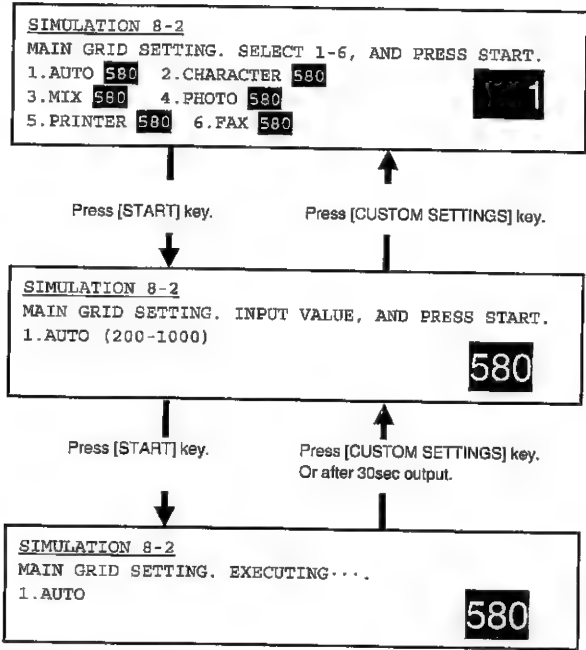

```
SIMULATION 8-2

```

4) Select the number that corresponds to the adjustment item using the numeric keypad.
5) Press the Start key.
6) Press the start key to have the voltage output for 30 seconds.
   The operation can be stopped with the CUSTOM SETTINGS key.
   If the output voltage is not within the requirement, do the following steps.
7) Enter the adjustment value using the numeric keypad.
8) Press the Start key
   (The adjustment value is put into memory, and the corresponding voltage is output for 30 seconds.)

Repeat steps 7 to 8 until the output requirement is satisfied.

ADJ 1B Adjust the developing bias voltage

This adjustment is needed in the following situations:
- The high voltage power PWB (MC/DV/TC) has been replaced.
- U2 trouble has occurred.
- The PCU PWB has been replaced.
- The EEPROM of the PCU PWB has been replaced.

(Main charger grid voltage adjustment)

Item/operation mode			Simulation		Setting range	Default	High voltage power PWB (MC/DV/TC)		
							Connector	Pin #	Actual voltage

THV+ SETTING. EXECUTING····
1.FRONT                                     300
```
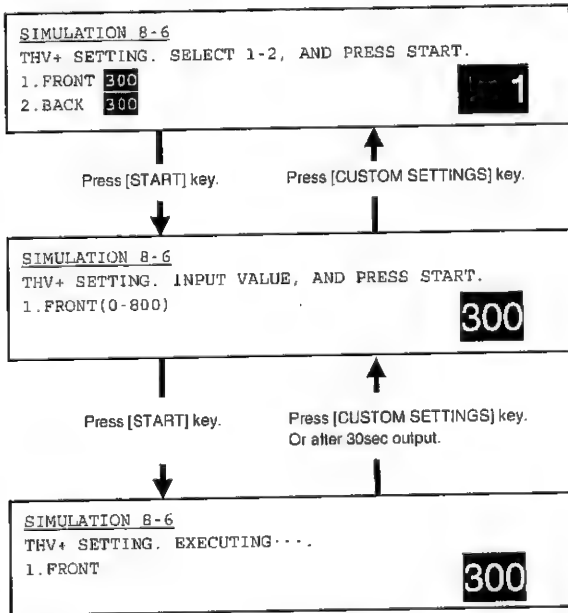

2) Select the number that corresponds to the adjustment item (FRONT/BACK) using the numeric keypad.

3) Press the Start key

4) Enter the adjustment value (default) using the numeric keypad.

5) Press the Start key

⚠ (The adjustment value is put into memory, and the corresponding current is output for 30 seconds.)

The operation can be stopped with the CUSTOM SETTINGS key.

Note: It is not possible to determine the adjusted transfer voltage (print operation mode) (FRONT/BACK). If the voltage seems to be abnormal after setting the default value, therefore, the high voltage PWB (MC/DV/TC) should be replaced.

Transfer voltage adjustment (transfer belt cleaning mode)

This adjustment is needed in the following situations:

• The high voltage power PWB (MC/DV/TC) has been replaced.

• U2 trouble has occurred.

• The PCU PWB has been replaced.

• The EEPROM of the PCU PWB has been replaced.

1) Remove the rear cover of the machine.

2) Apply a digital multi-meter to the connector CN2 pin (1) of the high voltage PWB and the chassis GND.
3) Go through the modes specified in Simulation 8-17.

```
SIMULATION 8-17
TRANSFER ROLLER SETTING. SELECT 1-3, AND PRESS START.
1.SHV FRONT 450
2.SHV BACK  450          1

```

Press [START] key.   Press [CUSTOM SETTINGS] key.
                            Or after 30sec output.

```
SIMULATION 8-17
TRANSFER ROLLER SETTING. EXECUTING····.
1.FRONT(0-600)
                         450
```
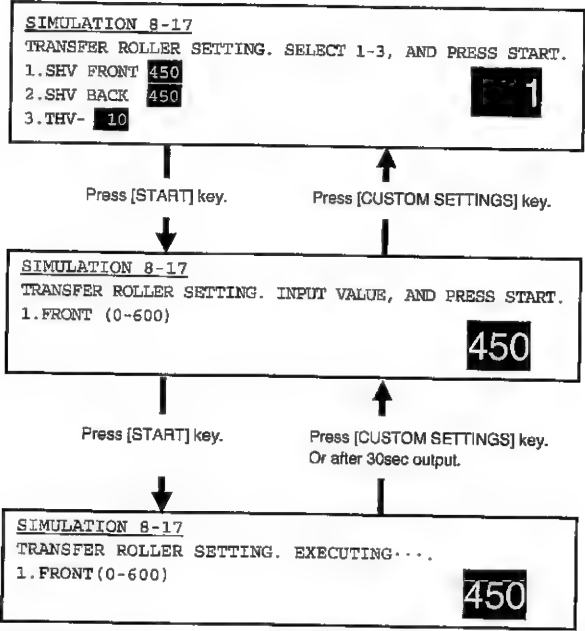

4) Select the number that corresponds to the adjustment item (SHF FRONT / SHF BACK) using the numeric keypad.

5) Press the Start key.

6) Set each adjustment item to the default value (enter the adjustment value and then press the Start key).

Note: The adjustment items (SHF FRONT / SHF BACK) correspond to the AC component of the 'transfer belt cleaning mode voltage' applied to the transfer roller, but this voltage component cannot be determined. If the voltage seems to be abnormal after setting the default adjustment value, therefore, the high voltage PWB (MC/DV/TC) should be replaced.

7) Select the number that corresponds to cleaning operation mode (THV-) using the numeric keypad.

Note: The adjustment items (THV-) corresponds to the DC component of the 'transfer belt cleaning mode voltage' applied to the transfer roller.

8) Press the Start key.

9) Press the Start key to have the voltage output for 30 seconds.

If the output voltage is not within the requirement, do the following steps.

The operation can be stopped with the CUSTOM SETTINGS key.

10) Enter the adjustment value using the numeric keypad.

11) Press the Start key.
(The adjustment value is put into memory, and the corresponding voltage is output for 30 seconds.)

Repeat steps 10 to 11 until the output requirement is satisfied.

Transfer voltage adjustment (transfer roller cleaning/ transfer roller print modes)

This adjustment is needed in the following situations:

- The high voltage power PWB (TC cleaning) has been replaced.
- U2 trouble has occurred.
- The PCU PWB has been replaced.
- The EEPROM of the PCU PWB has been replaced.

1) Connect the transfer section to the main body side using the transfer extension harness (DHAi-3629FCZZ).
2) Remove the front frame cover of the duplex section, and remove the rear frame cover of the transfer section.
3) Apply a digital multi-meter to the check pin of the high voltage PWB (TC cleaning) and the chassis GND.

4) Go through the modes specified in Simulation 8-18.

SIMULATION 8-18
TRANSFER CLEANING ROLLER SETTING. SELECT 1-2, AND

TRANSFER CLEANING ROLLER SETTING. EXECUTING····
1.CRHV PLUS(0-250)
`200`

5) Select the number that corresponds to the adjustment item (CRHV PLUS / CRHV MINUS) using the numeric keypad.

6) Press the Start key

7) Press the Start key to have the voltage output for 30 seconds.
The operation can be stopped with the CUSTOM SETTINGS key.

If the output voltage is not within the requirement, do the following steps.

8) Enter the adjustment value using the numeric keypad.

9) Press the Start key.
(The adjustment value is put into memory, and the corresponding voltage is output for 30 seconds.)

Repeat steps 8 to 9 until the output requirement is satisfied.

ADJ 2 Adjusting the developing unit

ADJ 2A Adjust the developing doctor gap

This adjustment is needed in the following situations:

• The developing unit has been disassembled.

• The print density is low.

• The toner is excessively dispersed.

1) Remove the developing unit of the machine.

2) Remove the developing unit cover and blade cover.
3) Loosen the DV doctor fixing screws.
4) Manually turn the DV roller to align the marking on the DV roller surface with the DV doctor position.
5) Insert a 0.525mm clearance gauge in between the DV roller and DV doctor so that the gauge is positioned at a distance of 40 mm to 70 mm from the DV doctor end face.
6) Tighten the DV doctor fixing screws while pressing the DV doctor in the arrow direction.
(This should be done for both front and rear frames.)
7) On both sides of the DV doctor and at its center, make sure that the DV doctor gap is 0.525 ±0.03.
Note: When inserting a clearance gauge, take care not to damage the DV doctor or MG roller.

Repeat steps 2 to 6 until the DV doctor gap meets the requirement.

ADJ 2B Adjust the developing roller main pole

This adjustment is needed in the following situations:
- The developing unit has been disassembled.
- The print density is low.
- The toner is excessively dispersed.

1) Remove the dveloping unit.
2) Remove the developing unit cover and blade cover, and then place the developing unit on a level surface.
3) Attach a piece of string to a sewing needle or pin.
4) With the string in hand, bring the needle closer to the DV roller while keeping the needle parallel with the roller. (Do not use a clip, which does not accurately indicate the position.)
5) Keeping the needle 2 to 3 mm off the DV roller surface, mark the DV roller surface at an extension of the needle tip. (Do not let the needle tip contact the DV roller.)
6) Measure the distance between the marking on the DV roller and leading edge of the DV doctor, and make sure that it is 19±0.5mm.

19± 0.5mm
If this requirement is not met, do the following steps.

7) Remove the front cover.
8) Loosen the fixing screws of the developing roller main pole adjusting plate, and make adjustments by moving the adjusting plate in the arrow direction.
Repeat steps 3 to 6 until the developing roller main pole meets the positional requirement.

ADJ 3 Adjusting image distortions

ADJ 3A Adjust print image distortions (LSU parallelism adjustment)

This adjustment is needed in the following situations:
- The LSU has been replaced or removed.
- Print images are distorted.

This adjustment should be followed by:

⚠ ADJ 7 / ADJ 7A: Adjust the print image off-center (print engine section)

1) Set A4 (11 x 8.5) paper to Tray 1.
2) Go through the modes specified in Simulation 64-1.

```
SIMULATION 64-1
SELF PRINT MODE. SELECT 0-7, AND PRESS START.

6. LEVEL :       1    7. DUPLEX   :1
```

3) Select PRINT PATTERN using the numeric keypad.
4) Select print pattern 71 (grid pattern).
5) Press the Start key
6) Select PRINT START using the numeric keypad.
7) Press the Start key
8) Check the printed grid pattern for distortions.
Check with one of the following methods.

[Check Method 1]
Compare the front frame side and rear frame side of the printed paper in terms of the distance between the outer end of the grid pattern image and the edge of the paper.

No adjustment is needed if the difference between these dimensions is within 0.5 mm.

R   a

Ra-Fb<±0.5mm

F   b
[Check Method 2]
Check the printed grid pattern for distortions.
If the right-angle level of the traverse print line is 0.5mm or less with respect to the longitudinal print line of paper, no adjustment is needed.

0~0.5mm

90°
Carry out the following work if the situation is unsatisfactory.

9) Draw out the manual paper feed tray, and remove the front frame side, side cover, fan cover cabinet, and fan unit.

10) Remove the fan unit.
11) Loosen the LSU fixing screws, and change the LSU fixing angle.
   • If the vertical line image is inclined to the left with respect to the front frame side, move the LSU fixing plate in arrow direction (a).
   • If the vertical line image is inclined to the right with respect to the front frame side, move the LSU fixing plate in arrow direction (b).

2) Manually turn the scanner drive pulley, and move Scanner Unit B until contact with the two stoppers on the CCD mounting plate.

If Scanner Unit B makes contact with the two stoppers on the CCD mounting plate simultaneously, the parallelism of Scanner Unit B is proper.
If this requirement is not met, do the following steps.

3) Loosen the pulley angle fixing screw on either the front or rear frame side of Scanner Unit B.
4) Adjust the pulley angle position on Scanner Unit B so that the scanner unit makes contact with both of the two stoppers on the CCD mounting plate at the same time.

5) Fix the pulley angle on Scanner Unit B.

If the above steps fail to provide an acceptable result, then do the following steps.

6) Loosen the fixing screw of the scanner unit drive pulley that is not in contact.

7) Manually turning the scanner unit drive pulley, move Scanner Unit B until it comes into contact with the two stoppers on the CCD mounting plate.

Scanner Unit B

Winding pulley

△ Repeat steps 5 to 11 until an acceptable result is obtained.

ADJ 3B Adjust the scanner (reading) unit parallelism

This adjustment is needed in the following situations:

• The scanner (reading) section has been disassembled.
• Scanned images are distorted.

1) Loosen the fixing screws for Scanner Unit A and scanner drive wire to release the scanner unit from the drive wire.
8) Without moving the scanner unit drive shaft, manually turn the scanner unit drive pulley so that Scanner Unit B makes contact with both of the two stoppers on the CCD mounting plate at the same time. (Change the positional relationship between the scanner unit drive pulley and the drive shaft.)

9) With Scanner Unit B in contact with both of the two stoppers on the CCD mounting plate at the same time, align the end face of Scanner Unit A with the right-hand side end face of the frame, and fix Scanner Unit A with the screws.
ADJ 3C Adjust scanned image distortions in the sub-scanning direction

This adjustment is needed in the following situations:
- The scanner (reading) section has been disassembled.
- Scanned images are distorted.

1) Make a test chart on A3 (11" x 17") paper as shown below. (Draw a rectangular with four right angles.)

L = 10mm
2) Set the test chart made in step 1 on the document table (about 30 mm in front of the document standard setting position), and make a copy on A3 (11" x 7") paper with the SPF unit open.

30mm
3) Check for distortions in the sub scanning direction.
   If La = Lb, there is no distortion.

La   Lb
If there is some distortion in the sub scanning direction, do the following steps.

4) Loosen either of two fixing screws of the scanner unit drive pulley. (Either one on the front or the rear side will do.)
5) With the scanner unit drive shaft kept stationary, manually turn the scanner unit drive pulley to change the parallelism of Scanner Units A and B. (Change the positional relationship between the scanner unit drive pulley and the drive shaft.)

6) Tighten the scanner unit drive pulley fixing screw.

Repeat steps 2 to 6 until an acceptable result is obtained.

If the above steps fail to eliminate distortions in the sub scanning direction, do the steps described in "ADJ 6E: Adjust scanned image distortions in the main scanning direction - 2."

ADJ 3D Adjust scanned image distortions in the main scanning direction - 1

This adjustment is needed in the following situations:
- The scanner (reading) section has been disassembled.
- Scanned images are distorted.

1) Make a test chart on A3 (11" x 17") paper as shown below. (Draw a rectangular with four right angles.)

L = 10mm
2) Set the test chart made in step 1 on the document table, and make a copy on A3 (11" x 17") paper.

3) Check for distortions in the main scanning direction.
   If the four angles of the rectangle on the copy are right angles, there is no distortion and therefore no further steps are needed.
If there is some distortion in the main scanning direction, do the following steps.

4) Check the difference (distortion balance) between left-hand and right-hand side images distortions.
| There is no difference between the distortion on the right and that on the left. $Lc = Ld$ | There is some difference between the distortion on the right and that on the left. $Lc \neq Ld$ |
If $Lc = Ld$, the distortion on the left is equal to that on the right. (The distortions are balanced.)

If the above requirement is satisfied, then do the steps described in "ADJ 3E: Adjust scanned image distortions in the main scanning direction - 2."

If the above requirement is not met, then do the following steps.

5) Change the height balance of the front frame side scanner rail.
- If the paper leading edge is more distorted than the paper trailing edge, then raise the scanner rail right side.
- If the leading edge is less distorted than the paper trailing edge, then lower the scanner rail right side.

6) Set the test chart made in step 1 on the document table, and make a copy on A3 (11" x 17") paper.

7) Check the image distortion balance in the main scanning direction.

Repeat steps 5 to 7 until the difference in size of image distortion (distortion balance) in the image scanning direction is equal.

ADJ 3E Adjust scanned image distortions in the main scanning direction - 2

This adjustment is needed in the following situations:

- The scanner (reading) section has been disassembled.
- Scanned images are distorted.

1) Make a test chart on A3 (11" x 17") paper as shown below. (Draw a rectangular with four right angles.)

L = 10mm
2) Set the test chart made in step 1 on the document table, and make a copy on A3 (11" x 17") paper.
3) Check for distortions in the main scanning direction.

If the four angles of the rectangle on the copy are right angles, there is no distortion and therefore no further steps are needed.
If there is some distortion in the main scanning direction, do the following steps. These steps assume that there is no or little difference in distortion between the paper's leading and trailing edges.

If there is some difference in distortion between the paper's leading and trailing edges, these steps should be preceded by the adjustment steps described in "ADJ 3D: Adjust scanned image distortions in the main scanning direction - 1", intended to provide almost the same level of distortion on the leading and trailing edges.

4) Remove the document table glass, and make adjustments by turning the main scanning direction image distortion adjusting screw.
- If the rear frame side image is shifted toward the paper's leading edge, then turn the adjusting screw clockwise.
- If the front frame side image is shifted toward the paper's leading edge, then turn the adjusting screw counterclockwise.

Repeat steps 2 to 4 until an acceptable result is obtained.

It changes approx. 0.5mm by 90 degrees rotation.

ADJ 4 Adjusting the SPF parallelism

ADJ 4A Adjust SPF levelness

This adjustment is needed in the following situations:

- The SPF section has been disassembled.
- The SPF unit has been replaced.

1) Create two check sheets for SPF levelness adjustment by cutting copy paper as illustrated below:

40mm

A4 size
2) Insert each of the two check sheets in between the CIS guide boss and the glass for SPF mode on each of the front and rear frame sides, and then close the SPF unit.
3) Gently pulling out each check sheet for SPF levelness adjustment, make sure that no gap is felt between the CIS guide boss and the glass for SPF mode for each of the front and rear frame sides.
If the above requirement is not met, do step 4.

4) Turn the height adjusting screw on the left side of the SPF rear frame to adjust the fore/aft levelness between the SPF frames.
If the front frame side is higher (i.e. there is a gap in B) : turn the height adjusting screw L on the left side of the SPF rear frame in the clockwise direction.

If the rear frame side is higher (i.e. there is a gap in A) : turn the height adjusting screw L on the left side of the SPF rear frame in the counterclockwise direction.

Repeat steps 2 to 4 until an acceptable result is obtained.

⚠ Note: If the above procedure will not allow an adjustment, turn the adjustment screw R on the rear frame of the SPF to perform an adjustment.

ADJ 4B   Adjust SPF skews

This adjustment is needed in the following situations:

- The SPF section has been disassembled.
- The SPF unit has been replaced.
- The SPF unit generates skewed scanned images.

1) Create an adjustment chart by printing in duplex mode the self-print pattern (grid pattern) specified in Simulation 64-1.

Make sure that the print grid pattern is almost in parallel with the paper edges, and apply position marks 'A', 'B', 'C' and 'D' to the leading and trailing edges of the paper for both front and back sides of the paper.
2) Copy the adjustment chart (created in step 1) to A3 (11" x 17") paper in duplex mode, and then check the image for skews (Set in the SPF feed tray so that the mark on the adjustment chart is at the edge).

Check with one of the following methods.

[Check Method 1]

(Front side)

Make sure that the output satisfies the condition: la-bl ≤± 1 mm
⚠ (Back side)
Make sure that the output satisfies the condition: lc-dl ≤± 1 mm
[Check Method 2]

⚠ Check that the squareness of the main scanning direction print line for the longitudinal direction of paper is within 0.5mm.
If the above requirement is met for the copied image of the paper's front side but not for the paper's back side, skip to step 4.

If the above requirement is not met for the paper's front side, then do step 3.

3) Loosen the hinge screws and lower the two attachments.
4) Open the SPF and loosen the screw.
5) Adjust by turning the SPF skew adjusting screw on the right side of the SPF rear frame.

Remove the hexagon cap nut of the SPF skew adjusting screw on the right side of the SPF hinge and loosen the fixing nut, then adjust by turning the SPF skew adjusting screw (hexagon screw).
▲ If a < b, then turn counterclockwise the SPF skew adjusting screw (hexagon screw). (When the main scanning direction print line is shifted to the left)

If a > b, then turn clockwise the SPF skew adjusting screw (hexagon screw). (When the main scanning direction print line is shifted to the right)

Repeat steps 2 to 5 until an acceptable result is obtained.

[If the copied image of the paper's back side is skewed beyond the acceptable level, do the following steps.]

6) Remove the SPF front cover.

7) Change the front frame side CIS fixing position (angle) to adjust the skew of the copied image of the paper's back side.

This adjustment should be done by loosening the CIS fixing screw on the SPF front side and then moving the fixing plate in the left or right direction.
▲ If c < d, then shift the CIS fixing plate to the right. (When the main scanning direction print line is shifted to the left)

If c > d, then shift the CIS fixing plate to the left. (When the main scanning direction print line is shifted to the right)

Repeat steps 2 to 7 until an acceptable result is obtained.

ADJ 5 Adjusting the image focus

The result of this adjustment will affect all image scan modes (copy, scan, and fax).

ADJ 5A Adjust the image focus in original table mode and SPF front-face mode (CCD)

This adjustment is needed in the following situations:

- The CCD unit has been removed from the machine.
- The CCD unit has been replaced.
- Copied/scanned/faxed images are not correctly focused.

1) Go through the modes specified in Simulation 48-1.
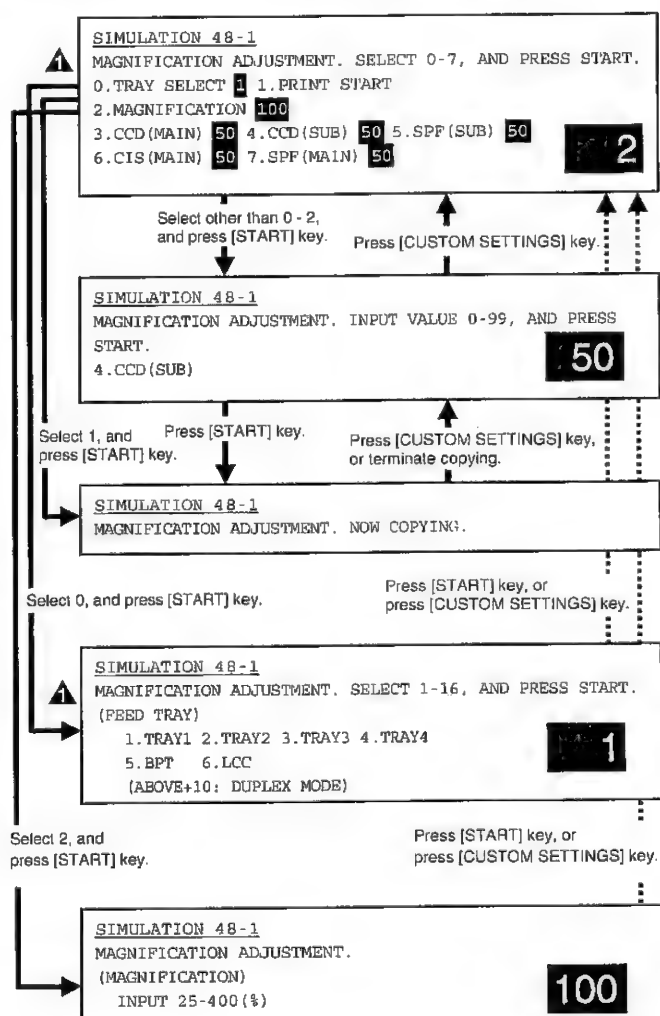

2) Set the adjustment item CCD (MAIN) to 50 (default).

3) Place a scale on the original table as illustrated below.
4) Make a normal copy on A4 paper.

5) Compare the copied image of the scale and the actual scale length in terms of length.

100mm scale (Original)

0.8mm

Copy image (1mm (1%) shorter than the original)
If the copied image of the scale is of almost the same length as the actual scale but is not satisfactorily focused, do the following steps.

6) Remove the table glass and dark box cover.

7) To prevent the CCD unit optical axis from being deviated, mark the CCD unit base as illustrated below.
8) Loosen two fixing screws of the CCD unit.
Note: The screws cross-marked in the illustration must not be loosened.

Loosening these screws could possibly change the CCD unit base optical axis. Once the optical axis has been changed, it cannot be corrected through on-site adjustments. Solving such a problem requires the replacement of the entire scanner unit.

9) Slide the CCD unit in the arrow direction (CCD sub-scanning direction) to change its mounted position.
If the copied image is not satisfactorily focused and larger than the original, slide the unit in direction B.

If the copied image is not satisfactorily focused and smaller than the original, slide the unit in direction A.

Note: After adjusting the CCD unit position, fix the CCD unit so that it is in parallel with the marker line added in step 7, referring to the graduations on the front and rear frames sides of the CCD unit base.

Repeat steps 4 to 9 until the copied image of the scale is of almost the same size as the actual scale and the image is satisfactorily focused.

ADJ 5B **Adjust the image focus in SPF back-face mode (CIS)**

This adjustment is needed in the following situations:

• The CIS unit has been removed.
• The CIS unit has been replaced.
• Copied/scanned/faxed images are not correctly focused.
• The SPF unit has been removed.
• The SPF unit has been replaced.

1) Make a duplex copy in SPF mode.

2) Make sure that the copied image on the back side of the paper is satisfactorily focused.

If the image is not satisfactorily focused, do the following steps.

3) Remove the rear frame and front frame cabinet of the SPF unit.

4) Adjust the focus by turning the CIS focus adjusting screws on the front and rear frame sides, respectively.

Feb. 9 2004
Repeat the above adjustments until an acceptable result is obtained.

ADJ 6 Adjusting the image magnification

ADJ 6A Adjust the image magnification in the main scanning direction in original table mode (CCD)

This adjustment is needed in the following situations:

- The CCD unit has been removed from the machine.
- The CCD unit has been replaced.
- Images are not correctly magnified in the main scanning direction.
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scan control PWB has been replaced.
- The EEPROM on the scan control PWB has been replaced.
- U2 trouble has occurred.

3) Place a scale on the original table in parallel with the main scanning direction, as illustrated below.

2) Make a normal copy on A4 paper.

3) Measure the lengths of the copied image of the scale and the actual scale.

100mm scale (Original)

10 20   90 100 110

0.8mm

Copy image (1mm (1%) shorter than the original)

10 20   90 100 110

4) Determine the image magnification factor using the following formula:

Image magnification factor (%) = Copy dimension/original dimension x 100

Example: Compare the copy and original dimensions by aligning the scale's 10 mm position with the copied image's 10 mm position.

Image magnification factor (%) = 99 / 100 x 100 = 99

If the image magnification factor is within the spec (100±0.8%), no adjustment is required; otherwise, do the following steps.

5) Go through the modes specified in Simulation 48-1.

SIMULATION 48-1
MAGNIFICATION ADJUSTMENT. SELECT 0-7, AND PRESS START.
0.TRAY SELECT 1 1.PRINT START
2.MAGNIFICATION 100
3.CCD(MAIN) 50 4.CCD(SUB) 50 5.SPF(SUB) 50
6.CIS(MAIN) 50 7.SPF(MAIN) 50

Select other than 0 - 2, and press [START] key.   Press [CUSTOM SETTINGS] key.

SIMULATION 48-1
MAGNIFICATION ADJUSTMENT. INPUT VALUE 0-99, AND PRESS START.
4.CCD(SUB)   50

Select 1, and press [START] key.   Press [START] key.   Press [CUSTOM SETTINGS] key, or terminate copying.

SIMULATION 48-1
MAGNIFICATION ADJUSTMENT. NOW COPYING.

Select 0, and press [START] key.   Press [START] key, or press [CUSTOM SETTINGS] key

SIMULATION 48-1
MAGNIFICATION ADJUSTMENT. SELECT 1-16, AND PRESS START.
(FEED TRAY)
  1.TRAY1 2.TRAY2 3.TRAY3 4.TRAY4
  5.BPT   6.LCC
  (ABOVE+10: DUPLEX MODE)

Select 2, and press [START] key.   Press [START] key, or press [CUSTOM SETTINGS] key.

SIMULATION 48-1
MAGNIFICATION ADJUSTMENT.
  (MAGNIFICATION)
  INPUT 25-400(%)   100
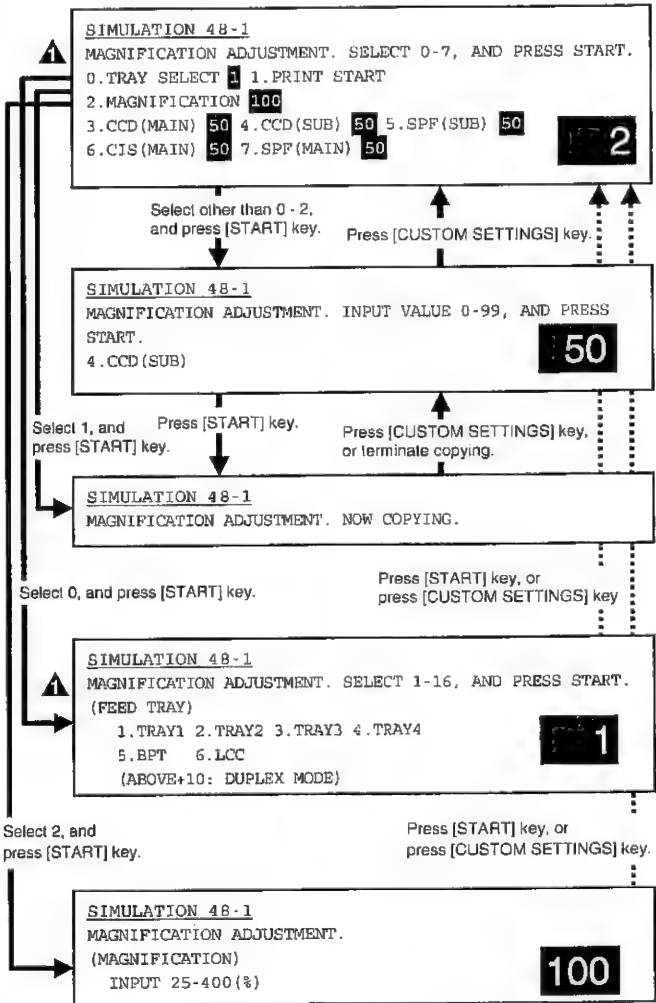

6) Select the number that corresponds to the adjustment item CCD (MAIN) using the numeric keypad.

This adjustment item is intended to adjust the image magnification in the main scanning direction in original table mode (CCD).

7) Press the Start key

8) Adjust the image magnification factor by entering an appropriate value through the numeric keypad.

9) Press the P or Start key

Pressing the Start key starts copy operation as well as applying the adjustment value.

Repeat steps 2 to 9 until the image magnification factor is satisfactory.

△ ADJ 6B Adjust the image magnification in the sub-scanning direction in original table mode (CCD)

This adjustment is needed in the following situations:

- The CCD unit has been removed from the machine.
- The CCD unit has been replaced.
- Images are not correctly magnified in the sub-scanning direction.
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scan control PWB has been replaced.
- The EEPROM on the scan control PWB has been replaced.
- U2 trouble has occurred.

1) Place a scale on the original table as illustrated below.
2) Make a normal copy on A4 paper.

3) Measure the lengths of the copied image of the scale and the actual scale.

100mm scale (Original)

0.8mm

Copy image (1mm (1%) shorter than the original)

4) Determine the image magnification factor using the following formula:

Image magnification factor (%) = Copy dimension/original dimension x 100

Example: Compare the copy and original dimensions by aligning the scale's 10 mm position with the copied image's 10 mm position.

Image magnification factor (%) = 99 / 100 x 100 = 99

If the image magnification factor is within the spec (100±0.8%), no adjustment is required; otherwise, do the following steps.

5) Go through the modes specified in Simulation 48-1.

6) Select the number that corresponds to the adjustment item CCD (SUB) using the numeric keypad.

This adjustment item is intended to adjust the image magnification in the sub scanning direction in original table mode (CCD).

7) Press the Start key.

8) Adjust the image magnification factor by entering an appropriate value through the numeric keypad.

9) Press the P or Start key

Pressing the Start key starts copy operation as well as applying the adjustment value.

Repeat steps 2 to 9 until the image magnification factor is satisfactory.

ADJ 6C Adjust the image magnification in the main scanning direction in SPF front-face mode (CCD)

This adjustment is needed in the following situations:

- The CCD unit has been removed from the machine.
- The CCD unit has been replaced.
- Images are not correctly magnified in the main scanning direction.
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scan control PWB has been replaced.
- The EEPROM on the scan control PWB has been replaced.
- U2 trouble has occurred.

1) On the SPF original tray, place such an original as illustrated below.

A4 size

10mm   10mm

2) Make a normal copy on A4 paper.
3) Measure the lengths of the copied image and the original image.

original

copy

4) Determine the image magnification factor using the following formula:

Image magnification factor (%) = Copy dimension/original dimension x 100

Image magnification factor (%) = 99 / 100 x 100 = 99

If the image magnification factor is within the spec (100±0.8%), no adjustment is required; otherwise, do the following steps.

5) Go through the modes specified in Simulation 48-1.

```
SIMULATION 48-1
MAGNIFICATION ADJUSTMENT. SELECT 0-7, AND PRESS START.
0.TRAY SELECT 1  1.PRINT START
2.MAGNIFICATION 100
3.CCD(MAIN) 50  4.CCD(SUB) 50  5.SPF(SUB) 50
6.CIS(MAIN) 50  7.SPF(MAIN) 50
```

Select other than 0 - 2, and press [START] key.

Press [CUSTOM SETTINGS] key.

```
SIMULATION 48-1

    INPUT 25-400(%)                       100
```

6) Using the numeric keypad, select the number that corresponds to the mode for which to make adjustments.

Select the adjustment item that is intended to adjust the image magnification in the main scanning direction in SPF front-face mode (CCD). (SPF (MAIN))

7) Press the Start key
8) Adjust the image magnification factor by entering an appropriate value through the numeric keypad.
9) Press the P or Start key

Pressing the Start key starts copy operation as well as applying the adjustment value.

Repeat the above adjustments until an acceptable result is obtained.

ADJ 6D Adjust the image magnification in the main scanning direction in SPF back-face mode (CCD)

This adjustment is needed in the following situations:

- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scan control PWB has been replaced.
- The EEPROM on the scan control PWB has been replaced.
- U2 trouble has occurred.
- Images are not correctly magnified in the main scanning direction.

1) On the SPF original tray, place such a duplex original as illustrated below.

A4 size

(both sides)

10mm | | 10mm
2) Make a normal duplex copy on A4 paper.
3) Measure the lengths of the copied image (on the back side) and the original image.

original

copy

4) Determine the image magnification factor using the following formula:

Image magnification factor (%) = Copy dimension/original dimension x 100

Image magnification factor (%) = 99 / 100 x 100 = 99

If the image magnification factor is within the spec (100±0.8%), no adjustment is required; otherwise, do the following steps.

5) Go through the modes specified in Simulation 48-1.

```
SIMULATION 48-1

Press [START] key, or press [CUSTOM SETTINGS] key.

```
SIMULATION 48-1
MAGNIFICATION ADJUSTMENT.
(MAGNIFICATION)
   INPUT 25-400(%)                       100
```

6) Select the number that corresponds to the adjustment item CIS (MAIN) using the numeric keypad.

▲ This adjustment item is intended to adjust the image magnification in the main scanning direction in SPF back-face mode (CIS). (CIS (MAIN))

7) Press the Start key
8) Adjust the image magnification factor by entering an appropriate value through the numeric keypad.
9) Press the P or Start key

Pressing the Start key starts copy operation as well as applying the adjustment value.

Repeat the above adjustments until an acceptable result is obtained.

ADJ 6E Adjust the image magnification in the sub-scanning direction in SPF mode

This adjustment is needed in the following situations:

- Images are not correctly magnified in the sub-scanning direction.
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scan control PWB has been replaced.
- The EEPROM on the scan control PWB has been replaced.
- U2 trouble has occurred.

1) On the SPF original tray, place such an original as illustrated below.
2) Make a normal copy on A4 paper.

3) Measure the lengths of the copied image and the original image.

4) Determine the image magnification factor using the following formula:

Image magnification factor (%) = Copy dimension/original dimension x 100

Image magnification factor (%) = 99 / 100 x 100 = 99

If the image magnification factor is within the spec (100±0.8%), no adjustment is required; otherwise, do the following steps.

5) Go through the modes specified in Simulation 48-1.

```
SIMULATION 48-1
MAGNIFICATION ADJUSTMENT. SELECT 0-7, AND PRESS START.
0.TRAY SELECT [1] 1.PRINT START
2.MAGNIFICATION [100]
3.CCD(MAIN) [50] 4.CCD(SUB) [50] 5.SPF(SUB) [50]

```
SIMULATION 48-1
MAGNIFICATION ADJUSTMENT.
(MAGNIFICATION)
   INPUT 25-400(%)                                [100]
```
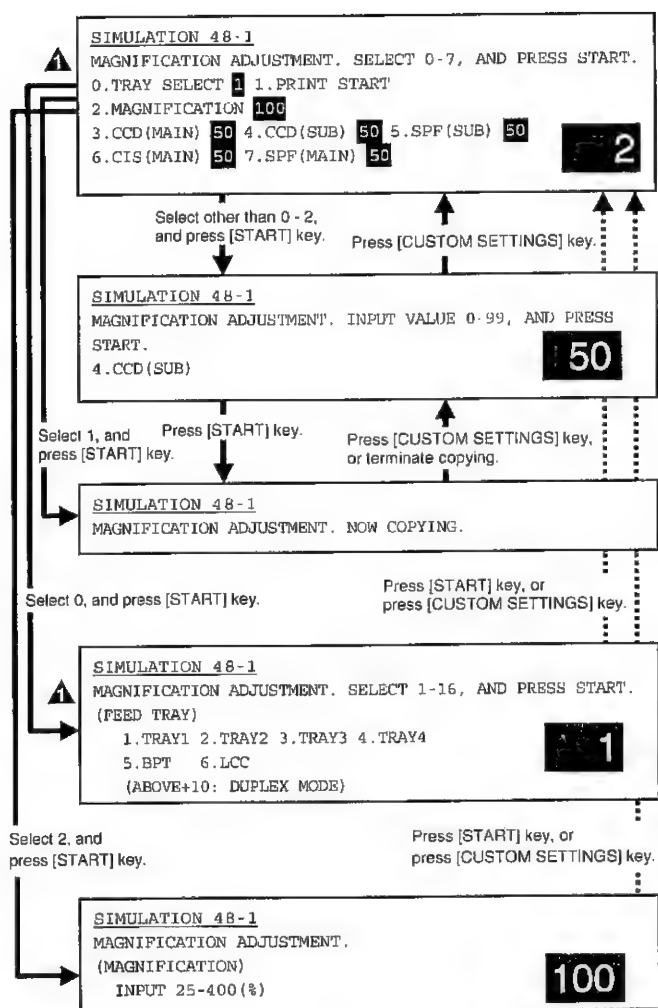

6) Select the number that corresponds to the adjustment item SPF (SUB) using the numeric keypad.

⚠ This adjustment items is intended to adjust the image magnification in the sub-scanning direction in SPF mode. (SPF (SUB))

7) Press the Start key

8) Adjust the image magnification factor by entering an appropriate value through the numeric keypad.

9) Press the P or Start key

Pressing the Start key starts copy operation as well as applying the adjustment value.

Repeat the above adjustments until an acceptable result is obtained.

Note: After adjusting the image magnification in the sub-scanning direction through Simulation 48-1, do the following steps if making a copy at a different magnification factor fails to produce a correctly scaled copy.

1) Go through the modes specified in Simulation 48-5.
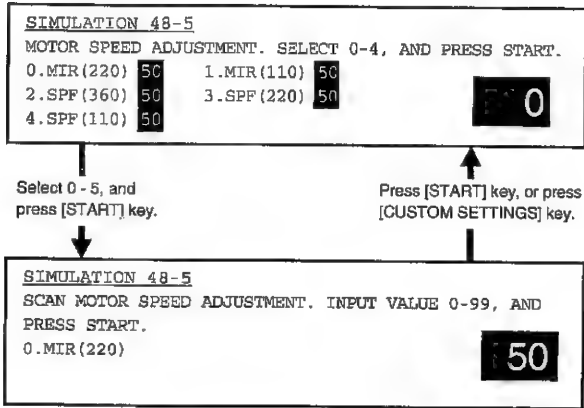

```
SIMULATION 48-5
MOTOR SPEED ADJUSTMENT. SELECT 0-4, AND PRESS START.
0.MIR(220) 50      1.MIR(110) 50
2.SPF(360) 50      3.SPF(220) 50                    0
4.SPF(110) 50
```

Select 0 - 5, and   Press [START] key, or press
press [START] key.   [CUSTOM SETTINGS] key.

```
SIMULATION 48-5
SCAN MOTOR SPEED ADJUSTMENT. INPUT VALUE 0-99, AND
PRESS START.
0.MIR(220)                                        50
```

2) Using the numeric keypad, select the number that corresponds to the mode for which to make adjustments.

2) Press the Start key

3) Enter the copy adjustment value using the numeric keypad.

   Make adjustments by changing the adjustment value for high revolution mode if the copy magnification is not correct for microcopies; or the adjustment value for low revolution mode if the copy magnification is not correct for blowbacks.

4) Press the Start key

   This applies the adjustment value.

ADJ 7 Adjusting the image off-center

ADJ 7A Adjust the print image off-center (print engine section)

This adjustment is needed in the following situations:
- The paper feed section has been disassembled.
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scan control PWB has been replaced.
- The EEPROM on the scan control PWB has been replaced.
- The scanner (reading) section has been disassembled.
- The scanner (reading) unit has been replaced.
- The LSU has been replaced.
- U2 trouble has occurred.

(Print image off-center adjustment)

1) Go through the modes specified in Simulation 50-5.

```
SIMULATION 50-5
LEAD EDGE ADJUSTMENT. SELECT 0-20, AND PRESS START.
0.TRAY SELECT 1  1.PRINT START

7	LEAD_EDGE (DENA)	Lead edge void set value	0 - 99	35	
8	TRAIL_EDGE (DENB)	Rear edge void adjustment value			
9	FRONT/REAR	Front/Rear void adjustment value			

2) Enter the number that corresponds to the paper feed tray that needs adjustments. (Choose from numbers 10 to 16.)

3) Press the Start key

4) Press the Start key

A self-print pattern image is printed.

Check the off-center of the printed self-print pattern image.

If so, no adjustment is required.

⚠ Measure the void area dimensions in the front and rear frame directions, and make sure that the difference between the two dimensions is within ±1.5 mm.
If the above requirement is not met, do the following steps.

5) Using the numeric keypad, change the adjustment value in steps of 0.1 mm. A larger setting shifts the printed image toward the front side.

6) Press the P or Start key. Pressing the Start key starts print operation as well as applying the adjustment value.

Check the off-center of the printed self-print pattern image.

Repeat steps 5 to 6 until an acceptable result is obtained.

ADJ 7B Adjust the scanned image off-center in original table mode (scan section)

This adjustment is needed in the following situations:

- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scan control PWB has been replaced.
- The EEPROM on the scan control PWB has been replaced.
- The scanner (reading) section has been disassembled.
- The scanner (reading) unit has been replaced.
- U2 trouble has occurred.

(Adjustment mode selection)

1) Go through the modes specified in Simulation 50-12.

	Item		Set range	Default
0	TRAY SELECT	Paper feed tray selection	1 - 6	–
1	COPY START	Copy START (Default)	–	–
2	MAGNIFICATION	Print magnification ratio	25 - 400%	100
(Off-center adjustment value)				
3	PLATEN	OC mode adjustment	0 - 99	50
4	SPF SIDE1	SPF front surface adjustment		
5	SPF SIDE2	SPF back surface adjustment		

2) Using the numeric keypad, select the adjustment item PLATEN, which is intended to adjust the off-center in original table mode.

3) Press the Start key

(Scan off-center adjustment)

1) Place an original on the original table.
2) Press the Start key

Check the off-center of the printed image.

If the off-center is 0±4.0 mm, no adjustment is required.
If the above requirement is not met, do the following steps.

3) Using the numeric keypad, change the adjustment value in steps of 0.1 mm to adjust the scan image off-center. A larger setting shifts the printed image toward the rear side.
4) Press the P or Start key.

   Pressing the Start key starts copy operation as well as applying the adjustment value.
5) Check the off-center of the printed image.

   Repeat the above adjustments until an acceptable result is obtained.

ADJ 7C   Adjust the scanned image off-center in SPF front-face mode (scan section)

This adjustment is needed in the following situations:

* The MFP control PWB has been replaced.
* The EEPROM on the MFP control PWB has been replaced.
* The scan control PWB has been replaced.
* The EEPROM on the scan control PWB has been replaced.
* The scanner (reading) section has been disassembled.
* The scanner (reading) unit has been replaced.
* U2 trouble has occurred.
* The SPF section has been disassembled.
* The SPF unit has been replaced.

(Adjustment mode selection)

1) Go through the modes specified in Simulation 50-12.

	Item		Set range	Default
0	TRAY SELECT	Paper feed tray selection	1 - 6	–
1	COPY START	Copy START (Default)	–	–
2	MAGNIFICATION	Print magnification ratio	25 - 400%	100
(Off-center adjustment value)				
3	PLATEN	OC mode adjustment	0 - 99	50
4	SPF SIDE1	SPF front surface adjustment		
5	SPF SIDE2	SPF back surface adjustment		

2) Using the numeric keypad, select the adjustment item SPF SIDE1, which is intended to adjust the off-center in SPF front-face mode.
3) Press the Start key

(Scan off-center adjustment)

1) Place an original on the SPF original tray.

2) Press the Start key

   Check the off-center of the printed image.

▲   If the off-center is 0±2.5 mm, no adjustment is required.
If the above requirement is not met, do the following steps.

3) Using the numeric keypad, change the adjustment value in steps of 0.1 mm to adjust the scan image off-center. A larger setting shifts the printed image toward the rear side.

4) Press the P or Start key.

   Pressing the Start key starts copy operation as well as applying the adjustment value.

5) Check the off-center of the printed image.

Repeat the above adjustments until an acceptable result is obtained.

ADJ 7D Adjust the scanned image off-center in SPF back-face mode (scan section)

This adjustment is needed in the following situations:

- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scan control PWB has been replaced.
- The EEPROM on the scan control PWB has been replaced.
- The scanner (reading) section has been disassembled.
- The scanner (reading) unit has been replaced.
- U2 trouble has occurred.
- The SPF section has been disassembled.
- The SPF unit has been replaced.

(Adjustment mode selection)

1) Go through the modes specified in Simulation 50-12.

Item			Set range	Default
0	TRAY SELECT	Paper feed tray selection	1 - 6	--
1	COPY START	Copy START (Default)	--	--
2	MAGNIFICATION	Print magnification ratio	25 - 400%	100
(Off-center adjustment value)				
3	PLATEN	OC mode adjustment	0 - 99	50
4	SPF SIDE1	SPF front surface adjustment		
5	SPF SIDE2	SPF back surface adjustment		

2) Using the numeric keypad, select the adjustment item SPF SIDE2, which is intended to adjust the off-center in SPF back-face mode.

3) Press the Start key

(Scan off-center adjustment)

1) Place a duplex document in the SPF original tray.
2) Press the Start key

   Since the front side and back side images are copied onto separate sheets, check the off-center of the back side image.

⚠   If the off-center is 0±2.7 mm, no adjustment is required.
If the above requirement is not met, do the following steps.

3) Using the numeric keypad, change the adjustment value in steps of 0.1 mm to adjust the scan image off-center. A larger setting shifts the printed image toward the front side.
4) Press the P or Start key.

   Pressing the Start key starts copy operation as well as applying the adjustment value.
5) Check the off-center of the printed image.

Repeat the above adjustments until an acceptable result is obtained.

ADJ 8   Adjusting the image position, image loss, and void area

ADJ 8A   Adjust copied image loss/void area in original table mode

This adjustment is needed in the following situations:

• The paper feed section has been disassembled.
• The MFP control PWB has been replaced.
• The EEPROM on the MFP control PWB has been replaced.
• The scan control PWB has been replaced.
• The EEPROM on the scan control PWB has been replaced.
• The scanner (reading) section has been disassembled.
• The scanner (reading) unit has been replaced.
• The LSU has been replaced.
• U2 trouble has occurred.

Papar lead edge   Papar tail edge

```
LIL    = 1.5 mm
LV     = 3.5 mm
TV     = 3.5 mm
FV+RV = 7.0 mm
```
1) Go through the modes specified in Simulation 50-1.

	Item	Content	Set range	Default
0	TRAY SELECT	Paper feed tray selection	1 - 6	–
1	COPY START	Copy START (Default)	–	–
2	MAGNIFICATION	Print magnification ratio	25 - 400%	–
(Lead edge adjustment value)				
3	RRCA	Document scan start position	0 - 99	50
4	RRCB	Resist roller clutch ON timing adjustment value		
10	SIDE2-ADJ.	Offset (adjustment) of the RRCB setting during rear print.	1 - 99	50
(Image loss set value)				
5	LEAD	Lead edge image loss set value	0 - 99	15
6	SIDE	Side image loss set value		20
(Void set value)				
7	LEAD_EDGE (DENA)	Lead edge void set value	0 - 99	35
8	TRAIL_EDGE (DENB)	Rear edge void adjustment value		
9	FRONT/REAR	Front/Rear void adjustment value		

(Leading edge image loss/void area adjustment)

1) Set the adjustment values for leading edge image loss and leading edge void as follows:

(Standard setting)

Leading edge image loss: 1.5 mm (LEAD:15)

Leading edge void: 3.5mm (DENA:35)

- Set the adjustment value for (LEAD) to 15 by entering "15" into the (LEAD) adjustment value field and then pressing the P key.
- Set the adjustment value for (DENA) to 35 by entering "35" into the (DENA) adjustment value field and then pressing the P key.

2) Make a copy at 100% magnification by entering "100" into the (MAGNIFICATION) field and then pressing the Start key, and check the leading edge void area and image loss.
If the leading edge image loss and void area are not at acceptable levels, do the following steps.

(The adjustment value should be changed in steps of 1msec/0.1mm.)

- If the leading edge void area is not 3.5 mm:
Repeat the process of changing the (RRCB) adjustment value and then pressing the Start key until attaining an acceptable level. (The adjustment value should be change in steps of 1msec/step, 0.1mm/step.)
- If the leading edge image loss is not 1.5mm:
Repeat the process of changing the (RRCA) adjustment value, in steps of 0.1 mm, and then pressing the Start key until attaining an acceptable level. (The adjustment value should be changed in steps of 0.2mm.)

Repeat the above adjustments until acceptable results are obtained.

(Trailing edge void area adjustment)

1) Make a copy at 100% magnification by entering "100" into the (MAGNIFICATION) field and then pressing the Start key, and check the trailing edge void area.

(Standard setting) Trailing edge void area: 3.5 mm
If the trailing edge void area is not at an acceptable level, do the following steps.

2) Repeat the process of changing the (TRAIL EDGE) adjustment value and then pressing the Start key until attaining an acceptable level.

Repeat the above adjustments until acceptable results are obtained.

(Front/rear frame direction image loss adjustment)

1) Set the (SIDE) adjustment value to 20 by entering "20" into the (SIDE) adjustment value field and then pressing the P key.

Note that changing this adjustment value shifts the image position in the front/rear frame direction.

(Front/rear frame direction void area)

1) Make a copy at 100% magnification by entering "100" into the (MAGNIFICATION) field and then pressing the Start key, and check the front/rear frame direction void area.

(Standard settings)

Front frame side void area = 3.5 mm, rear frame side void area = 3.5 mm, sum of front/rear frame direction void area = 7.0 mm
If the front/rear frame direction void area is not at an acceptable level, do the following steps.

2) Repeat the process of changing the (FRONT/REAR) adjustment value and then pressing the Start key until attaining an acceptable level.

Repeat the above adjustments until acceptable results are obtained.

Note: If the front and rear frame side void areas are not equal, adjust the image off-center position using Simulation 50-5.

ADJ 8B **Adjust the original scan start position (adjust the scanner read position in SPF-mode front face scan)**

This adjustment is needed in the following situations:
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scan control PWB has been replaced.
- The EEPROM on the scan control PWB has been replaced.
- The scanner (reading) section has been disassembled.
- The scanner (reading) unit has been replaced.
- U2 trouble has occurred.
- The SPF section has been disassembled.
- The SPF unit has been replaced.

This adjustment is intended to adjust the scanner read position in SPF-mode front face scan.

An incorrect adjustment would deviate the scanner stop position from the required position, thus possibly causing a shadow of the original table to appear at the leading edge of an image generated by SPF (front-face) mode scan.

1) Make a copy in SPF (front-face) mode, and make sure that the printed image at the leading edge of the copied image is free from shadows.

Papar lead edge

Image area

Shadow image of SPF
If the printed image at the leading edge of the copied image contains a shadow of the original table, then do the following steps.

2) Go through the modes specified in Simulation 53-8.

```
SIMULATION 53-8
SPF SCANNING POSITION ADJUSTMENT. PRESS START.

2.MANUAL    25
```

Select 2, and press [START] key.

Press [START] key, or press [CUSTOM SETTINGS] key.

```
SIMULATION 53-8
SPF SCANNING POSITION ADJUSTMENT. INPUT VALUE 1-70, AND
PRESS START.
2.MANUAL                    25
```
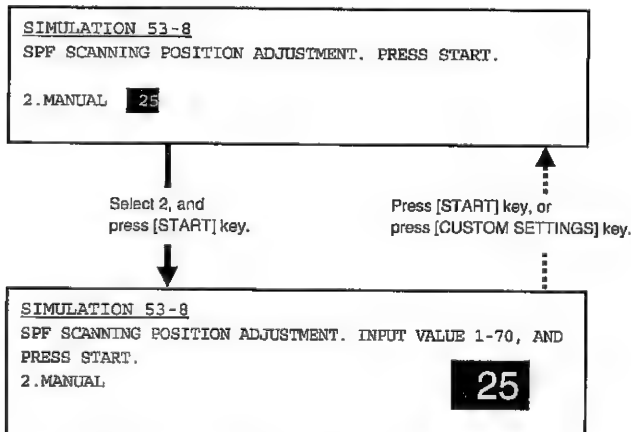

3) Enter the adjustment value and press the Start key.

Repeat the above adjustments until an acceptable result is obtained.

ADJ 8C **Adjust the copied image loss/void area in SPF mode**

This adjustment is needed in the following situations:
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scan control PWB has been replaced.
- The EEPROM on the scan control PWB has been replaced.
- The scanner (reading) section has been disassembled.
- The scanner (reading) unit has been replaced.
- U2 trouble has occurred.
- The SPF section has been disassembled.
- The SPF unit has been replaced.

8	LEAD_EDGE	Back surface lead edge image loss set value	0 - 99	15
9	FRONT/REAR	Back surface side edge image loss set value		20
10	TRAIL_EDGE	Back surface rear edge image loss set value	0 - 20	0

(Leading edge image loss adjustment)

1) Set the adjustment values for leading edge image loss for the front and back sides as follows:

   (Standard setting)

   ▲ 5 LEAD_EDGE: 15
   8 LEAD_EDGE: 15

   Paper leading edge void: 3.5mm (DENA:35)

   ▲ • Set the adjustment value for "5 LEAD_EDGE" and "8 LEAD_EDGE" to 15 by entering "15" into the (LEAD EDGE) adjustment value field and then pressing the P key.

2) In SPF mode, make a duplex copy at 100% magnification, and make sure that the leading edge image loss is 1.5 mm for both the front and back sides. (Select duplex mode from the paper selection mode as described in Simulation 50-6). (Enter "100" into the (MAGNIFICATION) field, and then press the start key).

Papar lead edge

```
TIL = 1.5 mm
TV  = 3.5 mm

Image area

Image loss (TIL)

Void (TV)

No Image
```
If an acceptable result is not obtained, do the following steps.

3) Repeat the process of changing the (SIDE1 & SIDE2) adjustment values and then pressing the Start key until attaining an acceptable level.

   SIDE1: Adjustment value for the position at which to read the leading edge of the original in SPF front side mode.

   SIDE2: Adjustment value for the position at which to read the leading edge of the original in SPF back side mode.

   (The adjustment value should be changed in steps of 0.1 mm.)

   (The timing in which to start reading the image should be determined based on the timing in which detector SPPD4 detects the leading edge of the original.)

Repeat steps 2 to 3 until an acceptable result is obtained.

(Trailing edge image loss adjustment)

1) Select duplex mode from paper selection mode as described in Simulation 50-6, enter "100" into the (MAGNIFICATION) field, and then press the Start key to make a duplex copy at 100% magnification in SPF mode, and make sure that the trailing edge image loss is 1.5 mm for both front and back sides.
Papar trail edge

```
Image area

TIL = 1.5 mm
TV  = 3.5 mm

Image loss (TIL)

Void (TV)

No Image
```

If an acceptable result is not obtained, do the following steps.

2) Repeat the process of changing the (TRAIL EDGE) adjustment value and then pressing the Start key until attaining an acceptable level.

Repeat the above adjustments until an acceptable result is obtained.

(Front/rear frame direction image loss adjustment)

1) Set the (FRONT/REAR) adjustment value to 20 by entering "20" into the (FRONT/REAR) adjustment value field and then pressing the P key.

Note that changing this adjustment value shifts the image position in the front/rear frame direction.

ADJ 8D Adjust the image loss in scanner mode

1) Go through the modes specified in Simulation 50-27.

```
SIMULATION 50-27
ORIGINAL IMAGE LOSS SETTING(FAX/SCN). SELECT 1-18, AND
PRESS START.
[FAX]
1.OC(LEAD_EDGE)  0  2.OC(FRONT/REAR)  0  3.OC(TRAIL_EDGE)  0

2) Enter the number that corresponds to the fax adjustment item using the numeric keypad.

3) Press the Start key

4) Enter the adjustment value using the numeric keypad.

5) Press the Start key

(The adjustment value should be changed in steps of 1.0mm.)

Scanned images must be visually checked for image loss.

Note: Make adjustments in the same manner as in ADJ 8A and ADJ 8C.

ADJ 9 Adjusting the copied image quality

This adjustment is needed in the following situations:
- The CCD unit has been replaced.
- U2 trouble has occurred.
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scanner control PWB has been replaced.
- The EEPROM on the scanner control PWB has been replaced.
- One or more parts of the scanner (reading) section have been replaced.
- One or more consumables (OPC drum, developer, transfer belt) have been replaced.

(Copy mode image quality adjustment items)

Image mode		Simulation for adjustment	
		All-mode adjustment	Individual-mode adjustment
Auto mode	Binary mode	46-2	
Text mode	Binary mode		46-9
Text/photo mode	Binary mode		46-10
Photo mode	Binary mode		46-11

Adjustment items	Simulation for adjustment
Copied image gamma adjustment (copier mode)	46-18
Copied image sharpness adjustment	46-31

(Copied image reference density)

Original

SHARP GRAY CHART

Lot No 01A

Copy

SHARP GRAY CHART

Lot No 01A
If the copied test chart (UKOG-0162FCZZ) image includes a background copy of patch 3 rather than patch 2, adjust all-copy mode to the image density level specified above.

(Copied image gamma, copied image sharpness)

Normally, default settings should be applied to 'copied image gamma' and 'copied image sharpness', but images should be adjusted according to user requests, if any.

ADJ 9A Adjust the binary mode copy density for all modes at once

1) Set the test chart (UKOG-0162FCZZ) on the original table so that it aligns with the front frame. Then put four or five pieces of A3 (11" x 17") paper .
2) Go through the modes specified in Simulation 46-2.
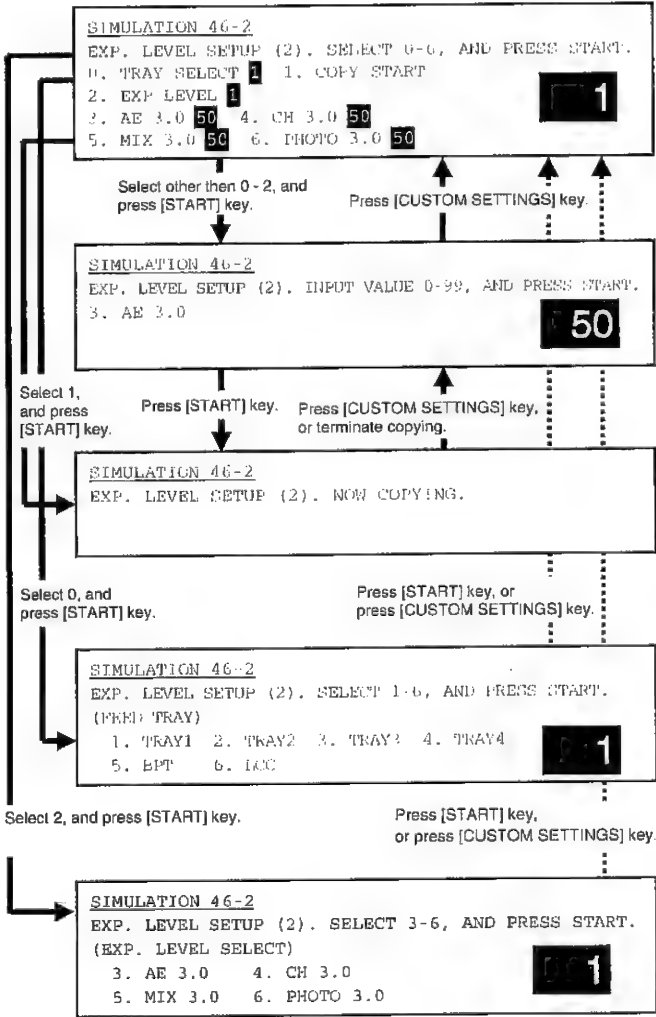

Item			Set range	Default
0	TRAY SELECT	Paper feed tray selection		
1	COPY START	Copy START (Default)		
2	EXP LEVEL	Exposure level selection		

	Item		Set range	Default
3	AE 3.0	AE mode	0 - 99	50
4	CH 3.0	Text mode 3.0		
5	MIX 3.0	Text/Photo mode 3.0		
6	PHOTO 3.0	Photo mode 3.0		

3) Using the numeric keypad, select the number that corresponds to the copy mode for which to make adjustments. (Choose from numbers 3 to 6.)

4) Press the Start key

5) Press the Start key (A copy is created.)

Check the density of the copied image.

If the copied image density is not at an acceptable level, do the following steps.

6) Adjust the copy density by entering an appropriate value through the numeric keypad.

A larger value provides higher density.

7) Press the P or Start key

This applies the adjustment value.

Pressing the Start key starts copy operation as well as applying the adjustment value.

8) Check the copied image density.

Repeat steps 6 to 8 until an acceptable copied image density is obtained.

Note: Adjusting the copied image density through this simulation changes the copied image density settings for all copy modes to the copied image density level applied by carrying out this simulation. Also, the copied image density gradient is automatically adjusted to the specified level.

The copied image density settings for individual copy modes adjusted through Simulations 46-9, -10, and -11 are changed to the copied image density level applied by this simulation.

ADJ 9B **Adjust the copy density in text binary mode**

ADJ 9C **Adjust the copy density in text/photo binary mode**

ADJ 9D **Adjust the copy density in photo binary mode**

This adjustment is intended to customize the copied image density settings. The copy density setting for each copy density adjustment level (1 to 5) in manual copy mode can be adjusted to a custom density level.

1) Set the test chart (UKOG-0162FCZZ) on the original table.

2) Go through the simulation modes that correspond to the copy modes for which to adjust the copy density (i.e., the modes specified in Simulations 46-9, -10, or -11).

(SIM 46-9) (Text mode)

9	4.0	Exposure level 4.0		
10	4.5	Exposure level 4.5		
11	5.0	Exposure level 5.0		

3) Using the numeric keypad, select the number that corresponds to the copy density adjustment level. (Choose from numbers 3 to 11.)

4) Press the Start key

5) Press the Start key (A copy is created.)

   If the copied image density is not at an acceptable level, do the following steps.

6) Adjust the copy density by entering an appropriate value through the numeric keypad.

   A larger value provides higher density.

7) Press the P or Start key.

   This applies the adjustment value.

   Pressing the Start key starts copy operation as well as applying the adjustment value.

8) Check the copied image density.

Repeat steps 5 to 9 until an acceptable copied image density is obtained.

ADJ 9E Adjust the copied image gamma in copy mode

1) Set the original on the original table.
2) Go through the modes specified in Simulation 46-18.

	Item		Set range	Default
0	TRAY SELECT	Paper feed tray selection		
1	PRINT START	Print start (Default)		
2	EXP LEVEL	Exposure level selection		
3	OC_AE	AE mode (OC)	0 - 127	64
4	OC_CHARA	Text mode (OC)		
5	OC_MIX	Text/Photo mode (OC)		
6	OC_PHOTO	Photo mode (OC)		
7	SPF_AE	AE mode (SPF)		
8	SPF_CHARA	Text mode (SPF)		
9	SPF_MIX	Text/Photo mode (SPF)		
10	SPF_PHOTO	Photo mode (SPF)		
11	CIS_AE	AE mode (CIS)		
12	CIS_CHARA	Text mode (CIS)		
13	CIS_MIX	Text/Photo mode (CIS)		
14	CIS_PHOTO	Photo mode (CIS)		

3) Using the numeric keypad, select the number that corresponds to the copy mode for which to make adjustments.

   (Choose from numbers 3 to 14.)

4) Press the Start key

5) Enter the gamma adjustment value using the numeric keypad.

   A larger value provides larger gamma gradient and higher image contrast.

6) Press the P or Start key

   Pressing the Start key starts copy (print) operation as well as applying the adjustment value.

7) Check the copied image gamma (copy density levels for low and high density areas) (contrast).

Repeat steps 5 to 7 until an acceptable copied image is obtained.

ADJ 9F   Adjust the copied image sharpness

1) Set the original on the original table.

2) Go through the modes specified in Simulation 46-31.

```
SIMULATION 46-31
SHARPNESS LEVEL SETUP. SELECT 1-12, AND PRESS START.
1.OC_AE  3       2.OC_CHARA 3      3.OC_MIX  3
4.OC_PHOTO 3     5.SPF1_AE 3       6.SPF1_CHARA 3
7.SPF1_MIX 3     8.SPF1_PHOTO 3    9.SPF2_AE  3
10.SPF2_CHARA 3  11.SPF2_MIX 3     12.SPF2_PHOTO 3
13.CIS_AE 3      14.CIS_CHARA 4    15.CIS_MIX 3
16.CIS_PHOTO 3
```

Press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 46-31
SHARPNESS LEVEL SETUP. INPUT VALUE 0-3, AND PRESS
START.
1.OC_AE                              3
```

	Item		Set range	Default
1	OC_AE	AE mode (OC)	1 - 5	3
2	OC_CHARA	Text mode (OC)		
3	OC_MIX	Text/Photo mode (OC)		
4	OC_PHOTO	Photo mode (OC)		
5	SPF1_AE	AE mode (SPF1)		
6	SPF1_CHARA	Text mode (SPF1)		
7	SPF1_MIX	Text/Photo mode (SPF1)		
8	SPF1_PHOTO	Photo mode (SPF1)		
9	SPF2_AE	AE mode (SPF2)		
10	SPF2_CHARA	Text mode (SPF2)		
11	SPF2_MIX	Text/Photo mode (SPF2)		
12	SPF2_PHOTO	Photo mode (SPF2)		
13	CIS_AE	AE mode (CIS)	1 - 5	4
14	CIS_CHARA	Text mode (CIS)	1 - 5	3
15	CIS_MIX	Text/Photo mode (CIS)		
16	CIS_PHOTO	Photo mode (CIS)		

3) Using the numeric keypad, select the number that corresponds to the copy mode for which to make adjustments.

   (Choose from numbers 1 to 16.)

4) Press the Start key

5) Adjust the sharpness by entering an appropriate value through the numeric keypad.

   A larger value provides higher sharpness.

6) Press the P or Start key

   Pressing the Start key starts copy (print) operation as well as applying the adjustment value.

7) Check the copied image sharpness.

Repeat steps 5 to 7 until an acceptable copied image is obtained.

ADJ 10   Adjusting the print quality in fax mode

This adjustment is needed in the following situations:

- The CCD unit has been replaced.
- U2 trouble has occurred.
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scanner control PWB has been replaced.
- The EEPROM on the scanner control PWB has been replaced.
- One or more parts of the scanner (reading) section have been replaced.

(Fax mode image density adjustment items)

		Half tone mode		

(Fax mode density)

The print density settings should be normally left at defaults but should be adjusted according to user requests, if any.

ADJ 10A Adjust the fax mode print density for all modes at once

1) Set the test chart (UKOG-0162FCZZ) on the original table so that it aligns with the front frame. Then put four or five pieces of A3 (11" x 17") paper .

2) Go through the modes specified in Simulation 46-12.

```
SIMULATION 46-12
EXP.LEVEL SETUP FAX(AUTO SET). SELECT 0-2, AND PRESS
START.
0.TRAY SELECT 1 1.COPY START         1
2.FAX EXP.LEVEL 50
```

Select other than 0 - 1, and
press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 46-12
EXP.LEVEL SETUP FAX(AUTO SET), INPUT VALUE 0-99, AND
PRESS START.                          50
2.FAX EXP.LEVEL
```

Select 1, and   Press [START] key.
press [START] key.   Press [CUSTOM SETTINGS] key,
                      or terminate copying.

```
SIMULATION 46-12
EXP.LEVEL SETUP FAX(AUTO SET). NOW PRINTING.
```

Select 0, and   Press [START] key, or
press [START] key.   press [CUSTOM SETTINGS] key.

```
SIMULATION 46-12
EXP.LEVEL SETUP FAX(AUTO SET).SELECT 1-6, AND PRESS

```
Item		Set range	Default
0	TRAY SELECT	Paper feed tray selection		
1	COPY START	Copy START (Default)		
2	FAX EXP. LEVEL	FAX mode print density	0 - 99	50

3) Select the adjustment item (FAX EXP. LEVEL) using the numeric keypad.

4) Press the Start key.

5) Press the Start key (A copy is created.)

Check the print density.

If the print density is not at an acceptable level, do the following steps.

6) Enter the print adjustment value using the numeric keypad.

7) Press the P or Start key

This applies the adjustment value.

Pressing the Start key starts print operation as well as applying the adjustment value.

8) Check the print density.

Repeat steps 6 to 8 until an acceptable print density is obtained.

Note: Adjusting the Fax print density through this simulation changes the print density settings for all Fax modes to the density level applied by carrying out this simulation.
The Fax mode print density settings for individual Fax modes adjusted through Simulations 46-13, -14, -15, -16 and -45 are changed to the print density level applied by this simulation.

ADJ 10B Adjust the fax mode print density in standard mode

ADJ 10C Adjust the fax mode print density in small-character mode

ADJ 10D Adjust the fax mode print density in fine mode

ADJ 10E Adjust the fax mode print density in super fine mode

ADJ 10F Adjust the fax mode print density in 600dpi mode

This adjustment is intended to the print mode for each Fax mode individually. In manual mode, the print density setting for each print density adjustment level (1 to 5) can be adjusted to a custom density level.

1) Set the test chart (UKOG-0162FCZZ) on the original table so that it aligns with the front frame. Then put four or five pieces of A3 (11" x 17") paper .
2) Go through the simulation modes that correspond to the Fax modes for which to adjust the print density (i.e., the modes specified in Simulations 46-13, -14, -15, -16, or -45).

3) Using the numeric keypad, select the number that corresponds to the adjustment item. Choose from numbers 3 to 8 (14).
   - Auto mode
   - Manual mode (print density adjustment level)

   For manual mode, select the number that corresponds to the print density level (1 to 5). (Choose from numbers (4 to 8) (10-14)).

4) Press the Start key

5) Press the Start key. (A copy is created.)

⚠ (Binary mode)

(Copy image reference density)
Original

If the copied test chart (UKOG-0162FCZZ) image includes a background copy of patch 6 rather than patch 5, adjust all-copy mode to the image density level specified above.

(Half tone mode)

(Copy image reference density)

Original
If the copied test chart (UKOG-0162FCZZ) image includes a background copy of patch 2 rather than patch 1, adjust all-copy mode to the image density level specified above.

If the print density is not at an acceptable level, do the following steps.

6) Adjust the print density by entering an appropriate value through the numeric keypad.

   A larger value provides higher density.

7) Press the P or Start key

   This applies the adjustment value.

   Pressing the Start key starts print operation as well as applying the adjustment value.

8) Check the printed image density.

Repeat steps 6 to 8 until an acceptable image density is obtained.

ADJ 11 Adjusting the image quality in scan mode

This adjustment is needed in the following situations:

- The CCD unit has been replaced.
- U2 trouble has occurred.
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scanner control PWB has been replaced.
- The EEPROM on the scanner control PWB has been replaced.
- One or more parts of the scanner (reading) section have been replaced.

(Scan mode image quality adjustment items)

(Scan mode image quality)

The image density settings should be normally left at defaults but should be adjusted according to user requests, if any.

ADJ 11A Adjust the scan mode image density for all modes at once

1) Set the test chart (UKOG-0162FCZZ) on the original table so that it aligns with the front frame. Then put four or five pieces of A3 (11" x 17") paper.

1) Go through the modes specified in Simulation 46-21.

```
SIMULATION 46-21
EXP.LEVEL SETUP SCANNER(AUTO SET), PRESS START.
0.SCANNER EXP.LEVEL 50
                                          ▮0
```

Press [START] key.   Press [START] key, or
                            press [CUSTOM SETTINGS] key.

```
SIMULATION 46-21
EXP.LEVEL SETUP SCANNER(AUTO SET), INPUT VALUE 0-99,
AND PRESS START.
0.SCANNER EXP.LEVEL                       50
```
	Item		Set range	Default
0	SCANNER EXP. LEVEL	Image density level	0 - 99	50

2) Select the adjustment item SCANNER EXP. LEVEL using the numeric keypad.

3) Press the Start key

4) Enter the image density adjustment value.

5) Press the P or Start key

Note: Adjusting the scanned image density through this simulation changes the image density settings for all scan modes to the image density level applied by carrying out this simulation.

The scan-mode image density settings for individual scan modes adjusted through Simulations 46-22, -23, -24, -25, and -45 are changed to the image density level applied by this simulation.

Scanned images must be visually checked to ensure the post-adjustment image density.

ADJ 11B Scan mode image density adjustment/ individual setup (standard mode)

ADJ 11C Scan mode image density adjustment/ individual setup (small-character mode)

ADJ 11D Scan mode image density adjustment/ individual setup (fine mode)

ADJ 11E Scan mode image density adjustment/ individual setup (super fine mode)

This adjustment is intended to the image mode for each scan mode individually. In manual mode, the image density setting for each scanned image density adjustment level (1 to 5) can be adjusted to a custom density level.

1) Set the test chart (UKOG-0162FCZZ) on the original table so that it aligns with the front frame. Then put four or five pieces of A3 (11" x 17") paper.

```
SIMULATION 46-21
EXP.LEVEL SETUP SCANNER(AUTO SET), PRESS START.

```

	Item		Set range	Default
0	AUTO	Auto	0 - 99	50
1	1.0	Exposure level 1		
2	2.0	Exposure level 2		
3	3.0	Exposure level 3		
4	4.0	Exposure level 4		
5	5.0	Exposure level 5		

3) Enter the number that corresponds to the following adjustment item using the numeric keypad. (Choose from numbers 0 to 5.)

- Auto mode
- Manual mode (print density adjustment level)

For manual mode, select the number that corresponds to the image density adjustment level (1 to 5). (Choose from numbers 1 to 5.)

6) Press the Start key

7) Enter the image density adjustment value.

8) Press the P or Start key

Scanned images must be visually checked to ensure the post-adjustment image density.

ADJ 11F — Adjust the image gamma in scanner mode

1) Go through the modes specified in Simulation 46-27.

```
SIMULATION 46-27
GAMMA SETUP(SCANNER), SELECT 1-9, AND PRESS START.
1.OC_Fine.HT  64    2.OC_SFine.HT  64    3.OC_UFine.HT  64
4.SPF_Fine.HT 64    5.SPF_SFine.HT 64    6.SPF_UFine.HT 64
7.CIS_Fine.HT 64    8.CIS_SFine.HT 64    9.CIS_UFine.HT 64
```

		Item
1	OC_Fine.HT	Fine text (Half-tone) (OC)
2	OC_SFine.HT	Super fine (Half-tone) (OC)
3	OC_UFine.HT	Ultra fine (Half-tone) (OC)
4	SPF_Fine.HT	Fine text (Half-tone) (SPF)
5	SPF_SFine.HT	Super fine (Half-tone) (SPF)
6	SPF_UFine.HT	Ultra fine (Half-tone) (SPF)
7	CIS_Fine.HT	Fine text (Half-tone) (CIS)
8	CIS_SFine.HT	Super fine (Half-tone) (CIS)
9	CIS_UFine.HT	Ultra fine (Half-tone) (CIS)

2) Using the numeric keypad, select the number that corresponds to the scan mode for which to make adjustments.

4) Press the Start key

5) Adjust the gamma by entering an appropriate value through the numeric keypad.

   A larger value provides larger gamma gradient and higher image contrast.

6) Press the Start key

   This applies the adjustment value.

Scanned images must be visually checked to ensure the post-adjustment image gamma.

ADJ 12 — Common image quality adjustments for all of copy, scan, and fax modes

(Common image quality adjustment items for all of copy, scan, and fax modes)

Adjustment items	Simulation for adjustment
Original table mode/SPF mode image density correction	46-20
(Auto mode operation spec setting for copy, scan, and fax)	46-19

ADJ 12A — Correct the image density in original table mode/SPF mode (Copy mode)

Used to adjust the copy density correction in the SPF copy mode for the document table copy mode. The adjustment is made so that the copy density becomes the same as that of the document table copy mode.

This adjustment is needed in the following situations:

- The CCD unit has been replaced.
- U2 trouble has occurred.
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.
- The scanner control PWB has been replaced.
- The EEPROM on the scanner control PWB has been replaced.
- One or more parts of the scanner (reading) section have been replaced.
- The CIS unit has been removed.
- The CIS unit has been replaced.
- The SPF unit has been removed.
- The SPF unit has been replaced.

1) Go through the modes specified in Simulation 46-20.

5	DSPF	DSPF (Back surface)		

▲ : Feb. 9 2004

2) Using the numeric keypad, enter the number that corresponds to the mode for which to make adjustments.

SPF front frame side (front face copy), SPF rear frame side (front face copy), SPF (back side copy) (Choose from numbers 3 to 5.)

3) Press the Start key

4) Enter the density correction value using the numeric keypad.

5) Press the P or Start key

6) Make two copies (one in original table mode and the other in SPF mode) and compare the copies in terms of density.

Repeat steps 4 to 6 until both copies provide the same density.

ADJ 12B Set up the auto mode operation for copy, scan, and fax

This adjustment is needed in the following situations:

• U2 trouble has occurred.

• The MFP control PWB has been replaced.

• The EEPROM on the MFP control PWB has been replaced.

• The scanner control PWB has been replaced.

• The EEPROM on the scanner control PWB has been replaced.

1) Go through the modes specified in Simulation 46-19.

```
SIMULATION 46-19
EXP.MODE SETUP. SELECT 1-4, AND PRESS START.
1.AE MODE          2
2.AE STOP MODE(COPIER) 1
3.AE STOP MODE(SCANNER) 0
4.AE STOP MODE(FAX)    0
```

Select 1, and press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 46-19
EXP.MODE SETUP. INPUT VALUE 1-2, AND PRESS START.
1.AE MODE
                                    2
```

Select 2, 3, or 4 and press [START] key.   Press [START] key, or press [CUSTOM SETTINGS] key.

```
SIMULATION 46-19
EXP.MODE SETUP. INPUT VALUE 0-1, AND PRESS START.
2.AE STOP MODE(COPIER)
                                    1
```

Mode	Set value	Item	Default
AE mode	1	Image quality priority mode (Normal mode) * Gamma is sharp to provide high contrast images.	1 (Japan) 2 (EX Japan)
	2	Toner consumption priority mode * Gamma is mild to provide low contrast images.	
AE fixed mode	0	AE fixed OFF	1 (COPIER)
	1	AE fixed ON	0 (SCANNER/ FAX)

1) Select "1 AE MODE" using the numeric keypad.

2) Press the Start key

3) Using the numeric keypad, select the number that corresponds to the operation spec.

4) Press the Start key.

Pressing the Start key applies the setting.

(Auto copy mode operation setting)

1) Using the numeric keypad, select the number that corresponds to the mode for which to make adjustments. (Choose from numbers 2 to 4.)

2) Press the Start key

3) Using the numeric keypad, select the number that corresponds to the operation mode.

4) Press the Start key.

AE fix OFF: Density (exposure) is automatically controlled on a real time basis. (The density level is dynamically changed according to the original's pattern.)

AE fix ON: The density of the leading edge of the original is detected and used to determine the overall density (exposure) level. (The overall density level is fixed.)

ADJ 13 Adjusting the fusing paper guide position

This adjustment is needed in the following situations:

• Paper is jammed in or around the fusing section.

▲ • Imperfect images, deformed images, or wrinkles are produced in the paper lead edge section or the rear edge section.

Adjust the fusing paper guide position by loosening the fusing paper guide fixing screws and the sliding the fusing paper guide in the arrow direction.
When shipping, it is fixed to the position which is one scale (0.5mm) over the center.

ADJ 14   Adjusting the paper size detection

ADJ 14A   Adjust the paper width sensor for the manual paper feed tray

This adjustment is needed in the following situations:

- The manual paper feed tray section has been disassembled.
- The manual paper feed tray unit has been replaced.
- U2 trouble has occurred.
- The PCU PWB has been replaced.
- The EEPROM on the PCU PWB has been replaced.

1) Go through the modes specified in Simulation 40-2.

```
SIMULATION 40-2
BYPASS TRAY ADJUSTMENT. SELECT 1-4, AND PRESS START.
1. MAX. POSITION
2. POSITION 1                          1
3. POSITION 2
4. MIN. POSITION
```

Select 1 and press [START] key.

Press [CUSTOM SETTINGS] key.

```
SIMULATION 40-2
BYPASS TRAY ADJUSTMENT.
MAX. POSITION ··· COMPLETE (or "ERROR")
```

Select 2 and press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 40-2
BYPASS TRAY ADJUSTMENT.
POSITION 1 ··· COMPLETE (or "ERROR")
```

Select 3 and press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 40-2
BYPASS TRAY ADJUSTMENT.
POSITION 2 ··· COMPLETE (or "ERROR")
```

Select 4 and press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 40-2
BYPASS TRAY ADJUSTMENT.
MIN. POSITION ··· COMPLETE (or "ERROR")
```

2) Open the manual paper feed guide to the maximum width position.
3) Select MAX. POSITION using the numeric keypad.

4) Press the Start key.
   The maximum width detection level is recognized.
5) Press the CUSTOM SETTINGS key.

6) Set the manual paper feed guide to the width for the A4R size.
7) Select POSITION 1 using the numeric keypad.
8) Press the Start key
   The A4R width detection level is recognized.
9) Press the CUSTOM SETTINGS key.
10) Set the manual paper feed guide to the width for the A5R size.
11) Select POSITION 2 using the numeric keypad.
12) Press the Start key.
   The A5R width detection level is recognized.
13) Press the CUSTOM SETTINGS key.
14) Open the manual paper feed guide to the minimum width position.
15) Select MIN. POSITION using the numeric keypad.
16) Press the Start key
   The minimum width detection level is recognized.

Note: When each of the above operations has been completed, the "COMPLETE" message appears; when any of the operations has failed, the "ERROR" message appears.

ADJ 14B   Adjust the paper width sensor for paper feed tray 3

This adjustment is needed in the following situations:

- The paper feed tray section has been disassembled.
- The paper feed tray unit has been replaced.
- U2 trouble has occurred.
- The PCU PWB has been replaced.
- The EEPROM on the PCU PWB has been replaced.

1) Go through the modes specified in Simulation 40-12.
```
SIMULATION 40-12
TRAY3 ADJUSTMENT. SELECT 1-2, AND PRESS START.
1. MAX. POSITION
2. MIN. POSITION                       1
```

Select 1 and press [START] key.

Press [CUSTOM SETTINGS] key.

```
SIMULATION 40-12
TRAY3 ADJUSTMENT.
MAX. POSITION ··· COMPLETE (or "ERROR")
```

Select 2 and press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 40-12
TRAY3 ADJUSTMENT.
MIN. POSITION ··· COMPLETE (or "ERROR")
```

2) Open the paper feed guide to the maximum width position.

3) Select MAX. POSITION using the numeric keypad.
4) Press the Start key.

The maximum width detection level is recognized.

5) Press the CUSTOM SETTINGS key.
6) Open the paper feed guide to the minimum width position.
7) Select MIN. POSITION using the numeric keypad.
8) Press the Start key.

The minimum width detection level is recognized.

Note: When each of the above operations has been completed, the "COMPLETE" message appears; when any of the operations has failed, the "ERROR" message appears.

ADJ 14C Adjust the paper width sensor for the SPF paper feed tray

This adjustment is needed in the following situations:
• The paper feed tray section has been disassembled.
• The paper feed tray unit has been replaced.
• U2 trouble has occurred.
• The scanner PWB has been replaced.
• The EEPROM on the scanner PWB has been replaced.
1) Go through the modes specified in Simulation 53-6.

```
SIMULATION 53-6
SPF TRAY ADJUSTMENT. SELECT 1-4, AND PRESS START.
1.MAX.POSITION
2.POSITION 1
3.POSITION 2
4.MIN.POSITION
```

Select 1, and press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 53-6
SPF TRAY ADJUSTMENT.
MAX.POSITION ... COMPLETE (or "ERROR")
```

Select 2, and press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 53-6
SPF TRAY ADJUSTMENT.
POSITION 1 ... COMPLETE (or "ERROR")
```

Select 3, and press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 53-6
SPF TRAY ADJUSTMENT.
POSITION 2 ... COMPLETE (or "ERROR")
```

Select 4, and press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 53-6
SPF TRAY ADJUSTMENT.
MIN.POSITION ... COMPLETE (or "ERROR")
```

2) Open the SPF paper feed guide to the maximum width position.

3) Select MAX. POSITION using the numeric keypad.
4) Press the Start key.

The maximum width detection level is recognized.

5) Press the CUSTOM SETTINGS key.
6) Open the SPF paper feed guide to the width for the A4R size.
7) Select POSITION 1 using the numeric keypad.
8) Press the Start key :

The A4R width detection level is recognized.

9) Press the CUSTOM SETTINGS key.
10) Open the SPF paper feed guide to the width for the A5R size.
11) Select POSITION 2 using the numeric keypad.
12) Press the Start key.

The A5R width detection level is recognized.

13) Press the CUSTOM SETTINGS key.

14) Open the SPF paper feed guide to the minimum width position.
15) Select MiN. POSITION using the numeric keypad.
16) Press the Start key

The minimum width detection level is recognized.

Note: When each of the above operations has been completed, the "COMPLETE" message appears; when any of the operations has failed, the "ERROR" message appears.

ADJ 15 Adjusting the original size detection (in original table mode)

This adjustment is needed in the following situations:

- The original size sensor section has been disassembled.
- The original size sensor section has been replaced.
- U2 trouble has occurred.
- The scanner control PWB has been replaced.
- The EEPROM on the scanner control PWB has been replaced.

ADJ 15A Adjust the detection point of the original size sensor (in original table mode)

1) Go through the modes specified in Simulation 41-1.

```
SIMULATION 41-1
PD SENSOR CHECK..
OCSW  PD1  PD2  PD3  PD4  PD5  PD6  PD7
```
2) Gradually turn over the original detection arm unit in the arrow direction, and loosen the original cover switch actuator adjusting screw so that the OCSW indicator changes from inverse video to normal video when the arm unit top reaches a height of 32±0.5mm from the table glass. Then move the actuator to adjust its position. (If the original cover switch turns on in improper timing, the original detection mechanism mail fail to operate correctly.)

Original detection arm unit

32±5mm

Table glass

Original cover switch actuator
ADJ 15B Adjust the sensitivity of the original size sensor

1) Go through the modes specified in Simulation 41-2.

```
SIMULATION 41-2
PD SENSOR ADJUSTMENT. SELECT 2, AND PRESS START.
(PLEASE OPEN THE ORIGINAL COVER.)
1. NO ORIGINAL
2. A3 ORIGINAL                                    1
```

Select 1 and press [START] key.   Press [CUSTOM SETTINGS] key.

```
SIMULATION 41-2
PD SENSOR ADJUSTMENT.
NO ORIGINAL -   COMPLETE (or "ERROR at  PD1 PD2...")
A3 ORIGINAL -   INCOMPLETE
```

Select 2 and press [START] key.   Press [CUSTOM SETTINGS] key.
(Error)

```
SIMULATION 41-2
PD SENSOR ADJUSTMENT.
NO ORIGINAL · · · COMPLETE
A3 ORIGINAL · · · COMPLETE (or "ERROR at  PD1 PD2...")
```

2) Open the original cover. With nothing placed on the original table, select NO ORIGINAL using the numeric keypad.
3) Press the Start key

This sets the sensor level with no original detected.

4) Set A3 (11" x 17") paper on the original table, and select A3 ORIGINAL using the numeric keypad.
5) Press the Start key

This sets the sensor level with an original detected.

When each of the above operations has been completed, the "COMPLETE" message appears; when any of the operations has failed, the "ERROR" message appears.

ADJ 16 Adjusting the touch panel coordinates

This adjustment is needed in the following situations:

- The operation panel has been replaced.
- U2 trouble has occurred.
- The MFP control PWB has been replaced.
- The EEPROM on the MFP control PWB has been replaced.

1) Go through the modes specified in Simulation 65-1.

```
SIMULATION 65-1

  +                              +

  +                              +
```
2) Press the four cross mark points.

Pressing the cross mark points correctly results in gray display. When the touch panel adjustment is complete with the four points pressed, the sub-number entry screen for simulation reappears.

If any error is detected, the touch panel returns to adjustment mode.

Note: Never use something with a sharp tip (such as a needle or pin) to press the touch panel.

ADJ 17 Adjusting the supply voltage

This adjustment is needed in the following situations:

- One or more parts of the DC main power supply unit have been replaced.
- One or more parts of the DC sub power supply unit have been replaced.

(24 V supply voltage adjustment)

1) Apply a digital multi-meter to the DC main PWB 24 V line (CN3, 1 pin) and GND (CN3, 4 pin).

2) Turn RV202 on the DC main power supply PWB so that the voltage is 24 V.

(38 V supply voltage adjustment)

3) Apply a digital multi-meter to the DC main PWB 38 V line (CN8, 1 pin) and GND (CN8, 4 pin).

4) Turn RV201 on the DC main power supply PWB so that the voltage is 38 V.

(12 V supply voltage adjustment)

5) Apply a digital multi-meter to the DC sub PWB 12 V line (CN4, 1 pin) and GND (CN4, 6 pin).

6) Turn RV102 on the DC sub power supply PWB so that the voltage is 12 V.
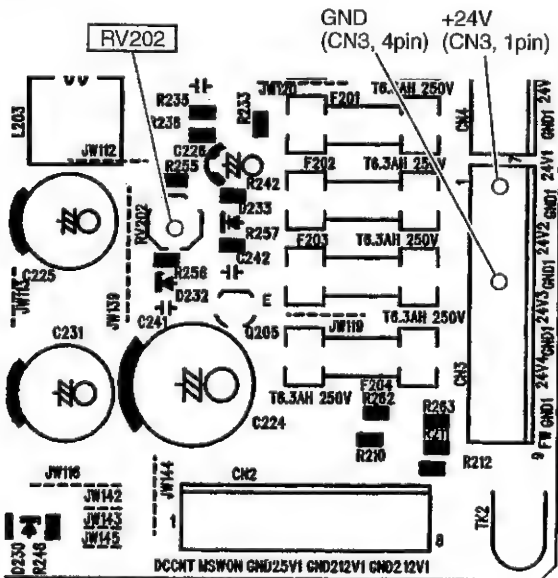

[8] SIMULATION

⚠ 1. Adjustment value/Simulation and storage data

A. Simulation adjustment value/ Set value data

⚠ Each controller is provided with an EEPROM. The adjustment/set values are collected to the MFP controller. If they are changed, they are sent back and saved.
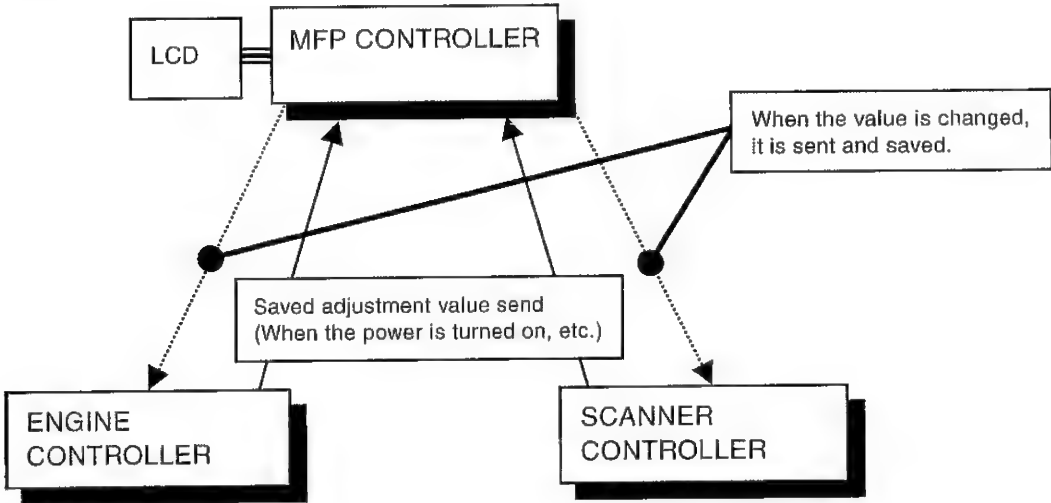

⚠ B. Each storage data

(Data saved by the PCU PWB)

2. Outline and purpose

The simulation has the following functions to grasp the machine operating status, identify the trouble position and causes in an earlier stage, and make various setups and adjustments speedily for improving the serviceability of the machine.

1) Various adjustments
2) Setup of specifications and functions
3) Canceling troubles
4) Operation check
5) Various counters check, setup, and clear
6) Machine operating status (operation history) data check, clear
7) Transfer of various data (adjustments, setup, operations, counters)

The operating procedures and the displays differ depending on the form of the operation panel of the machine.

3. Code-type simulation

A. Operating procedures and operations

∗ Entering the simulation mode

1) Copy mode key ON → Program key ON → Asterisk (∗) key ON → CLEAR key ON → Asterisk (∗) key ON → Ready for input of a main code of simulation
2) Entering a main code with the 10-key → START key ON
3) Entering a sub code with the 10-key → START key ON
4) Select an item with the scroll key and the item key.
5) The machine enters the mode corresponding to the selected item.
   Press START key or EXECUTE key to start the simulation operation.

   To cancel the current simulation mode or to change the main code and the sub code, press the user setup key.

∗ Canceling the simulation mode to return to the normal mode

1) Press CA key.

START (Copy mode)

Press the Program key.

Press the asterisk (*) key.

Press the clear key.

Press the asterisk (*) key.

Standby for entry of SIM code.

Enter the main code of SIM with the 10-key.

The main code of SIM is displayed.

Press the START button.

Press the CUSTOM SETTINGS key

NO

Is it the same simulation ?

YES

Is there a sub code ?

YES

Standby for entry of SIM sub code

Enter SIM sub code with the 10-key.

Press the START button.

NO

Press the CUSTOM SETTINGS key

YES

Do you want to perform another simulation ?

NO

he

Select the mode and the item with the scroll key and the item key.

The simulation mode is canceled.

Operation check ?

YES

Press the EXECUTE button and OK button.

NO

Operation is made according to the selected mode and item.

Do you want to end the simulation ?

YES

Press the clear all key.

NO

Operating conditions check ?

YES

Press the EXECUTE button and OK button.

NO

The display is made according to the selected some and the item.

Data clear ?

YES

Press the EXECUTE button and OK button.

NO

The selected mode and the item are cleared.

Adjustments or setting (counter data change) ?

YES

NO

Operation is made according to the selected mode and the item. (Other modes)

The display is made according to the selected mode and the item.

Do you want to change the content ?

NO

YES

The changed content is stored.

Enter the new setting and adjustment values.

Press the EXECUTE button and OK button.

B. Simulation list

(1) Main/ Sub

Code		Function (Purpose)	Purpose	Section		Item	
Main	Sub						
1	1	Used to check the operations of the scanner (read) unit and its control circuit.	Operation test/Check	Optical (Image scanning)		Operation	
	2	Used to check the operation of sensor and detector in the scanning (read) section and the related circuit.	Operation test/Check	Optical (Image scanning)		Operation	
2	1	Used to check the operations of the automatic document feeder unit and the control circuit.	Operation test/Check	DSPF		Operation	
	2	Used to check the operations of the sensors and detectors in the automatic document feeder unit and the related circuits.	Operation test/Check	DSPF		Operation	
	3	Used to check the operations of the loads in the automatic document feeder unit and the control circuits.	Operation test/Check	DSPF		Operation	
3	2	Used to check the operation of sensor and detector in the finisher and the related circuit.	Operation test/Check	Finisher		Operation	
	3	Used to check the operation of the load in the finisher and the control circuit.	Operation test/Check	Finisher		Operation	
	10	Finisher (AR-F16) adjustment	Adjustment	Finisher		Operation	
	30	Used to check the operations of the sensors and detectors in the inserter.	Operation test/Check	Inserter			
	31	Used to check the operations of the loads in the inserter and the related circuits.	Operation test/Check	Inserter		Operation	
	32	Inserter paper width detection level setting.	Setting (Adjustment)	Inserter		Operation	
4	2	Used to check the operations of the sensors and detectors in the paper feed section (large capacity tray) and the related circuit.	Operation test/Check	Paper feed		Operation	
	3	Used to check the operations of the loads in the paper feed section (large capacity tray) and the related circuit.	Operation test/Check	Paper feed		Operation	
5	1	Used to check the operation of the display, LCD in the operation panel, and control circuit.	Operation test/Check	Operation (Display/Operation key)		Operation	
	2	Used to check the operation of the heater lamp and the control circuit.	Operation test/Check	Fixing (Fusing)		Operation	
	3	Used to check the operation of the scanner lamp and the control circuit.	Operation test/Check	Optical (Image scanning)		Operation	
	4	Used to check the operation of the discharge lamp and the related circuit.	Operation test/Check	Process		Operation	
6	1	Used to check the operation of the paper transport system loads and the control circuit.	Operation test/Check	Paper transport (Discharge/ Switchback/ Transport)		Operation	
	2	Used to check the operations of each fan motor and its control circuit.	Operation test/Check	Other		Operation	
	3	Used to check the operations of the transfer unit and the related circuit.	Operation test/Check	Process (Transfer)		Operation	

Code		Function (Purpose)	Purpose	Section		Item	
Main	Sub						
7	1	Used to set the operating conditions of aging.	Setting			Operation	
	6	Used to set the intermittent aging cycle.	Setting			Operation	
	8	Used to set the warm-up time display YES/NO.	Setting			Operation	
8	1	Used to check and adjust the operations of the developing voltage of each color and the control circuit.	Adjustment/Operation test/Check	Image process (Photoconductor/ Developing/ Transfer/Cleaning)			
	2	Used to check and adjust the operation of the main charger grid voltage in each printer mode and the control circuit.	Adjustment/Operation test/Check	Image process (Photoconductor/ Developing/ Transfer/Cleaning)			
	6	Used to check and adjust the operation of the transfer voltage and the control circuit.	Adjustment/Operation test/Check	Image process (Photoconductor/ Developing/ Transfer/ Cleaning)/Transfer			
	17	Used to check and adjust the operation of the transfer voltage and the related circuit. (Transfer belt cleaning mode)	Operation test/Check	Image process (Photoconductor/ Developing/ Transfer/Cleaning)			
	18	Used to check and adjust the voltage of the transfer CL roller cleaning/ transfer CL roller print mode and the control circuit. (Not used)	Adjustment/Operation test/Check	Image process (Photoconductor/ Developing/ Transfer/Cleaning)			
	19	Used to check and adjust the fusing bias voltage and the control circuit. (Not used)	Adjustment/Operation test/Check	Fusing			
9	1	Used to check and adjust the operation of the load (clutch/ solenoid) in the duplex section and the control circuit.	Operation test/Check	Duplex		Operation	
	2	Used to check the operations of the sensors and detectors in the duplex section and its control circuit.	Operation test/Check	Duplex		Operation	
10	1	Used to check the operations of the toner motor and the related circuit.	Operation test/Check	Process (Developing)		Operation	
	2	Used to check the operations of the toner remaining quantity sensor and the related circuit.	Operation test/Check	Process (Developing)		Operation	
13	0	Used to cancel the self-diag "U1" trouble. (Only when FAX is installed.)	Clear/Cancel (Trouble etc.)	FAX		Trouble	
14	0	Used to cancel excluding the self-diag U1/LCC/U2/PF troubles.	Clear/Cancel (Trouble etc.)			Trouble	Error
15	0	Used to cancel the self-diag "U6-09, F3-12, 22" (large capacity paper feed tray, paper feed trays 1, 2) troubles.	Clear/Cancel (Trouble etc.)	LCC		Trouble	
16	0	Used to cancel the self-diag U2 troubles.	Clear/Cancel (Trouble etc.)	MFP control PWB, PCU PWB, scanner control PWB		Trouble	
17	0	Used to cancel the PF troubles (when the copy inhibit command from the host computer is received).	Clear/Cancel (Trouble etc.)	Communication unit (TEL/LIU/ MODEM etc.)		Trouble	Error
21	1	Used to set the maintenance cycle.	Setting			Specifications	Counter

Code		Function (Purpose)	Purpose	Section		Item	
Main	Sub						
22	1	Used to check the print count value in each section and each operation mode. (Used to check the maintenance timing.)	Adjustment/Setup/ Operation data output/ Check (Display/Print)			Counter	
	2	Used to check the total numbers of misfeed and troubles. (When the number of misfeed is considerably great, it is judged as necessary for repair. The misfeed rate is obtained by dividing this count value with the total counter value.)	Adjustment/Setup/ Operation data output/ Check (Display/Print)			Trouble	
	3	Used to check misfeed positions and the misfeed count of each position. (If the misfeed count is considerably great, it may be judged as necessary to repair.)	Adjustment/Setup/ Operation data output/ Check (Display/Print)	Sections other than SPF/DSPF section		Trouble	Misfeed
	4	Used to check the trouble (self diag) history.	Adjustment/Setup/ Operation data output/ Check (Display/Print)			Trouble	
	5	Used to check the ROM version of each unit (section).	Other			Software	
	6	Used to output the list of the setting and adjustment data (simulations, FAX soft switch, counters).	Adjustment/Setup/ Operation data output/ Check (Display/Print)			Data	Adjust/Setting data
	7	Used to display the key operator code. (This simulation is used when the customer forgets the key operator code.)	Adjustment/Setup/ Operation data output/ Check (Display/Print)			Data	User data
	8	Used to check the number of use of the finisher, the SPF, and the scan (reading) unit.	Adjustment/Setup/ Operation data output/ Check (Display/Print)	Optical (Image scanning)	Finisher	Counter	
	9	Used to check the number of use (print quantity) of each paper feed section.	Adjustment/Setup/ Operation data output/ Check (Display/Print)	Paper feed, ADU		Counter	
	10	Used to check the system configuration (option, internal hardware).	Adjustment/Setup/ Operation data output/ Check (Display/Print)			Specifications	Options
	11	Used to check the use frequency (send/receive) of FAX. (Only when FAX is installed)	Adjustment/Setup/ Operation data output/ Check (Display/Print)	FAX		Data	
	12	Used to check the SPF misfeed positions and the number of misfeed at each position. (When the number of misfeed is considerably great, it can be judged as necessary for repair.)	Adjustment/Setup/ Operation data output/ Check (Display/Print)	DSPF		Trouble	
	13	Used to check the operating time of the process section (OPC drum, DV unit, toner bottle).	Adjustment/Setup/ Operation data output/ Check (Display/Print)			Counter	
	19	Used to check the values of the counters related to the scan mode and the internet FAX mode.	Adjustment/Setup/ Operation data output/ Check (Display/Print)	Scanner		Counter	
23	2	Used to check the trouble history of paper jam and misfeed. (If the number of misfeed and troubles is considerably great, it may be judged as necessary to repair.)	Adjustment/Setup/ Operation data output/ Check (Display/Print)			Trouble	
	80	Used to check the operations of the sensors and detectors in the paper feed and transport section.	Operation test/Check	Paper feed, paper transport		Operation	

Code		Function (Purpose)	Purpose	Section		Item	
Main	Sub						
24	1	Used to clear the misfeed counter, the misfeed history, the trouble counter, and the trouble history. (The counters are cleared after completion of maintenance.)	Data clear			Counter	
	2	Used to clear the number of use (the number of prints) of each paper feed section.	Data clear	Paper feed		Counter	
	3	Used to clear the number of use of the finisher, SPF, and the scan (reading) unit.	Data clear			Counter	
	4	Used to reset the maintenance counter.	Data clear			Counter	
	5	Used to reset the developer counter. (The developer counter of the DV unit which is installed is reset.)	Data clear			Counter	Developer
	6	Used to reset the copy counter.	Data clear			Counter	Copy
	7	Used to clear the OPC drum counter. (Perform this simulation when the OPC drum is replaced.)	Data clear	Image process (Photoconductor/ Developing/ Transfer/Cleaning)		Counter	Photo conductor
	9	Used clear the printer mode print counter and the self print mode print counter.	Data clear	Printer		Counter	
	10	Used to clear the FAX counter. (Only when FAX is installed)	Data clear	FAX		Counter	
	11	Used to reset the OPC drum rotation time, and the DV unit rotation time counter. The developer counter in the DV unit installed is reset.	Data clear	Image process (Photoconductor/ Developing/ Transfer/Cleaning)		Counter	Developer
	15	Used to clear the counters related to the scan mode and the internet FAX mode.	Data clear			Counter	
25	1	Used to check the operations of the developing section (toner concentration, humidity and toner concentration sensor, humidity sensor). (The toner concentration sensor output can be monitored.)	Operation test/Check	Process (Developing section)		Operation	
	2	Used to make the initial setting of toner concentration when replacing developer.	Setting	Image process (Photoconductor/ Developing/ Transfer/Cleaning)			
26	2	Used to set the paper size of the large capacity tray (LCC) and the paper feed tray 2. (When the paper size is changed, this simulation must be executed to change the paper size in software.)	Setting	Paper feed		Setting	
	3	Used to set the specifications of the auditor. Setting must be made according to the auditor use conditions.	Setting	Auditor		Specifications	
	5	Used to set the count mode of the total counter and the maintenance counter.	Setting			Specifications	Counter
	6	Used to set the specifications (paper, fixed magnification ratio, etc.) of the destination.	Setting			Specifications	Destination
	10	Used to set the network scanner trial mode.	Setting			Operation	

Code		Function (Purpose)	Purpose	Section		Item	
Main	Sub						
26	18	Used to set YES/NO of toner save operation. (This function is valid only in Japan and UK versions. (Depends on the destination setting of SIM26-6.) For the other destinations, the same setting can be made by the user program P22.)	Setting			Specifications	Operation mode
	30	Used to set the operation mode conforming to the CE mark (Europe safety standards). (Conforming to soft start when driving the fusing heater lamp.)	Setting			Specifications	Operation mode (Common)
	35	Used to set whether the same continuous troubles are displayed as one trouble or the series of troubles with SIM 22-4 when the same troubles occur continuously.	Setting			Specifications	
	38	Used to set CONTINUE/STOP of printing when maintenance timing is over and the count value reaches 110% of replacement timing (life).	Setting	Other		Specifications	
	41	Used to set YES/NO of the automatic magnification ratio selection (AMS) in the pamphlet mode.	Setting			Specifications	Operation mode (Common)
	50	Black-White reverse YES/NO setting	Setting			Specifications	Operation
	52	Used to set whether non-print paper (insertion paper, cover paper) (blank image print paper) is counted up or not.	Setting	Paper transport (Discharge/ Switchback/ Transport)		Specifications	Operation mode
	68	Used to set ENABLE/DISABLE of the CA key cancel function of print stop.	Setting			Specifications	Operation
27	1	Used to set the specifications for operations in case of communication trouble between the host computer and MODEM (machine side). (When communication trouble occurs between the host computer MODEM and the machine, the self diag display (U7-00) is printed and setting for inhibition of print or not is made.)	Setting	Communication unit (TEL/LIU/ MODEM etc.)		Specifications	Operation mode
	5	Used to enter the machine tag No. (This function allows to check the tag No. of the machine with the host computer.)	Setting	Communication unit (TEL/LIU/ MODEM etc.)		Specifications	Operation mode
30	1	Used to check the operation of sensors and detectors in other than the paper feed section and the operations of the related circuits.	Operation test/Check			Operation	
	2	Used to check the operation of sensors and detectors in the paper feed section and the related circuits.	Operation test/Check	Paper feed		Operation	
40	1	Used to check the operation of the manual feed tray paper size detector and the related circuit. (The operation of the manual feed tray paper size detector can be monitored with the LCD display.)	Operation test/Check	Paper feed		Operation	
	2	Used to adjust the manual paper feed tray paper width detector detection level.	Adjustment	Paper feed		Operation	
	7	Used to enter the manual paper feed tray paper width adjustment value.	Adjustment/Setup	Paper feed		Operation	

: Feb. 9 2004

Code		Function (Purpose)	Purpose	Section		Item	
Main	Sub						
40	11	Used to check the multi-purpose tray width detection adjustment value.	Operation test/Check	Paper feed		Operation	
	12	Used to check the multi-purpose tray width detection adjustment value.	Adjustment/Setup	Paper feed		Operation	
41	1	Used to check the operation of the document size sensor and the related circuit. (The operation of the document size sensor can be monitored with the LCD display.)	Operation test/Check	Other		Operation	
	2	Used to adjust the document size sensor sensing level.	Adjustment	Other		Operation	
	3	Used to check the operation of the document size sensor and the related circuit. (The document size sensor output level can be monitored with the LCD display.)	Operation test/Check	Other		Operation	
43	1	Used to set the fusing temperature in each operation mode.	Setting	Fixing (Fusing)		Operation	
	3	Fusing roller RPM setting.	Setting (Adjustment)	Fixing (Fusing)		Operation	
44	1	Used to set enable/disable of correction operations in the image forming (process) section.	Setting	Image process (Photoconductor/ Developing/ Transfer/Cleaning)		Operation	
	2	Used to perform the gain adjustment (image density sensor LED current adjustment) of the image density sensor and the gain adjustment (OPC drum marking sensor LED current adjustment) of the OPC drum marking sensor.	Adjustment	Image process (Photoconductor)		Operation	
	4	Used to set the target density level in the image density correction.	Setting	Image process (Photoconductor/ Developing)		Operation	
	5	Used to set the reference developing bias voltage, the reference main charger grid voltage, and the laser power in the image density correction.	Setting	Image process (Photoconductor/ Developing)		Operation	
	9	Used to check the data related to the image forming section correction (process correction) result (corrected main charger grid voltage, the developing bias voltage, and the laser power voltage in each print mode). (This simulation allows to check that correction is performed normally or not.)	Adjustment/Setup/ Operation data output/ Check (Display/Print)	Image process (Photoconductor/ Developing/ Transfer/Cleaning)		Data	Operation data (Machine condition)
	12	Used to display sampling toner image patch density data in image density correction. (Used to check that the correction is performed normally or not.)	Adjustment/Setup/ Operation data output/ Check (Display)	Image process (Photoconductor/ Developing)		Operation	
	14	Used to check the output level of the temperature sensor and the humidity sensor.	Adjustment/Setup/ Operation data output/ Check (Display)	Image process (Photoconductor/ Developing)		Operation	
	16	Used to check the toner concentration control data.	Adjustment/Setup/ Operation data output/ Check (Display)	Image process (Developing)		Operation	

| Code | | Function (Purpose) | Purpose | Section | | Item | |
Main	Sub						
46	2	Used to adjust the copy density in all the copy modes (Auto, Text, Text/ Photo, and Photo mode).	Adjustment			Picture quality	Density
	9	Used to adjust the print density for each density level (display value) in the copy mode (binary - Text mode). An optional print density can be set for each density level (display value).	Adjustment			Picture quality	Density
	10	Used to adjust the print density for each density level (display value) in the copy mode (binary - Text/Photo mode). An optional print density can be set for each density level (display value).	Adjustment			Picture quality	
	11	Used to adjust the print density for each density level (display value) in the copy mode (binary - Photo mode). An optional print density can be set for each density level (display value).	Adjustment			Picture quality	Density
	12	Used to adjust the print density in the FAX mode (all modes).	Adjustment			Picture quality	
	13	Used to adjust the print density in the FAX mode (each normal mode). (Only when FAX is installed.)	Adjustment			Picture quality	
	14	Used to adjust the print density in the FAX mode (each fine mode). (Only when FAX is installed.)	Adjustment			Picture quality	
	15	Used to adjust the print density in the FAX mode (each super fine mode). (Only when FAX is installed.)	Adjustment			Picture quality	
	16	Used to adjust the print density in the FAX mode (each ultra fine mode). (Only when FAX is installed.)	Adjustment			Picture quality	
	17	Used to set the gain in shading correction.	Setting	Optical (Image scanning)	CCD, CIS	Operation	
	18	Used to adjust the gamma (density gradient) in the copy mode.	Adjustment			Picture quality	Density
	19	Used to set the auto mode operation specifications in each mode (copy, scan, FAX).	Adjustment			Picture quality	Density
	20	Used to adjust the copy density correction in the SPF copy mode for the document table copy mode. The adjustment is made so that the copy density becomes the same as that of the document table copy mode.	Adjustment	SPF		Picture quality	Density
	21	Used to adjust the scanner exposure level in all the scanner modes.	Adjustment			Picture quality	Density
	22	Used to adjust the scanner exposure level in the normal text mode.	Adjustment			Picture quality	Density
	23	Used to adjust the scanner exposure level in the fine text mode.	Adjustment			Picture quality	Density
	24	Used to adjust the scanner exposure level (in the super fine text mode).	Adjustment			Picture quality	Density
	25	Used to adjust the scanner exposure level in the ultra fine text mode.	Adjustment			Picture quality	Density
	27	Used to adjust the gamma (density gradient) of the network scanner mode.	Adjustment			Picture quality	

Code		Function (Purpose)	Purpose	Section		Item	
Main	Sub						
46	31	Used to adjust sharpness of the copy mode.	Adjustment			Picture quality	
	39	Used to adjust sharpness of the FAX mode.	Adjustment			Picture quality	
	45	Used to adjust the image density in the FAX mode (600dpi).	Adjustment			Picture quality	
48	1	Used to adjust the copy magnification ratio (in the main scanning and the sub scanning directions).	Adjustment	Optical (Image scanning)		Picture quality	
	5	Used to adjust the copy magnification ratio in the sub scanning direction.	Adjustment	Optical (Image scanning)		Picture quality	
50	1	Used to adjust the copy image position and the void area (image loss) adjustment on print paper in the copy mode. (The similar adjustment can be performed with SIM 50-5 and 50-2 (Simplified method).) (Document table mode)	Adjustment			Picture quality	Image position
	2	Used to adjust the document scan position, the image print position, and the void area (image loss). (Simple adjustment) (This adjustment is the simple method of SIM 50-1.) (Document table mode)	Adjustment			Picture quality	Image position
	5	Used to adjust the print image position and the void area (image loss) on print paper. (Adjustment as the print engine) (This adjustment is reflected on all the FAX/printer/copy modes.)	Adjustment			Picture quality	
	6	Used to adjust the copy image position and void area (image loss) on print paper in the copy mode. (The similar adjustment can be performed with SIM 50-7 (simple method).) (SPF mode)	Adjustment			Picture quality	
	7	Used to adjust the copy image position and void area (image loss) on print paper in the copy mode. (The similar adjustment can be performed with SIM 50-6.) (SPF mode)	Adjustment			Picture quality	
	10	Used to adjust the print image off-center position. (Adjusted separately for each paper feed section.)	Adjustment			Picture quality	Image position
	12	Used to adjust the scan image off-center position. (Adjusted separately for each scan mode.)	Adjustment			Picture quality	Image position
	27	Used to adjust the image loss of the scan image in the FAX/scan mode.	Adjustment			Picture quality	
51	2	Used to adjust the contact pressure of paper on the resist roller of each section (each paper feed, duplex feed and SPF paper feed of the copier). (This adjustment is required when the print image position variations are considerably great or when paper jams occur frequently.)	Adjustment	Paper transport (Discharge/ Switchback/ Transport)		Operation	

Code		Function (Purpose)	Purpose	Section		Item	
Main	Sub						
53	6	Used to adjust the DSPF width detection level.	Adjustment			Operation	
	7	Used to enter the SPF width detection adjustment value.	Adjustment/Setup/ Operation data output/ Check (Display/Print)	DSPF		Operation	
	8	Used to adjust the document scan start position. (Used to adjust the scanner scan position in the SPF mode front scan.)	Adjustment				
55	1	Used to set the specifications of the engine control operations. (PCU PWB)	Setting			Operation	Specifications
	2	Used to set the specifications of the scanner control operations. (Scanner control PWB)	Setting			Operation	Specifications
	3	Used to set the specifications of the controller operations. (MFP control PWB)	Setting			Operation	Specifications
56	1	Used to transfer the MFP controller data. (Used to repair the PWB.)	Data transfer	MFP controller		Data transfer	
60	1	Used to check the MFP control (DRAM) operations (read/write).	Operation test/Check	ICU		Operation	
61	1	Used to check the operation of the scanner (write) unit (LSU).	Operation test/Check	Scanner (write) unit (LSU)		Operation	
	2	Used to adjust the laser power (absolute value) in the copy mode.	Adjustment	Scanner (write) unit (LSU)		Operation	
	3	Used to adjust the laser power (absolute value) in the FAX mode.	Adjustment	Scanner (write) unit (LSU)		Operation	
	4	Used to adjust the laser power (absolute value) in the printer mode.	Adjustment	Scanner (write) unit (LSU)		Operation	
62	1	Used to format the hard disk.	Data clear	MFP controller (HDD)		Clear	
	2	Used to check the operation of the hard disk (read/write). (Only in the model with a disk installed) (Partial check)	Operation test/Check	MFP controller (HDD)		Operation	
	3	Used to check the operation of the hard disk (read/write). (All areas check)	Operation test/Check	MFP controller (HDD)		Operation	
	6	Used to check the operations of the hard disk. (The self diag operation of the SMART function is executed.)	Operation test/Check	MFP controller (HDD)		Clear	
	7	Used to check the operations of the hard disk. (The result of the self diag operation of the SMART function is printed out.)	Operation test/Check	MFP controller (HDD)		Clear	
	8	Used to format the hard disk (the system area excluded).	Data clear	MFP controller (HDD)		Clear	
	10	Used to delete a job complete list (also to delete job log data)	Data clear	MFP controller (HDD)		Clear	
	11	Used to delete document filing data. (The management area (standard folder, user folder) is cleared.)	Data clear	MFP controller (HDD)		Clear	
63	1	Used to check the result of shading correction. (The shading correction data are displayed.)	Adjustment/Setup/ Operation data output/ Check (Display/Print)	Optical (Image scanning)		Operation	
	2	Used to execute shading.	Adjustment	Optical (Image scanning)		Operation	
	7	Used to adjust the white plate scan start position for shading. (Document table mode)	Adjustment	Laser (Exposure)		Operation	

Code		Function (Purpose)	Purpose	Section		Item	
Main	Sub						
64	1	Used to check the operation of the printer section (self-print operation), (The print pattern, the paper feed mode, the print mode, the print quantity, and the density can be optionally set.)	Operation test/Check			Operation	
65	1	Used to adjust the touch panel (LCD display section) detection position.	Adjustment	Operation (Display/Operation key)			
	2	Used to check the result of the touch panel (LCD display) detection position adjustment. (The coordinates are displayed.)	Adjustment/Setup/ Operation data output/ Check (Display/Print)	Operation (Display/Operation key)			
66	1	Used to change and check the FAX soft switch functions. (Used to change and check the functions provided for the FAX soft switches.)	Setting	FAX			
	2	Used to clear the FAX soft switch function data and to set to the default. (Excluding the adjustment values.)	Data clear	FAX		Data	
	3	Used to check the operation of the FAX PWB memory (read/write). (This adjustment is required when the PWB is replaced with a new one.)	Operation test/Check	FAX		Data	
	4	Used to check the output operation of data signals in each data output mode of FAX. (Used to check the operation of MODEM.) Send level: Max. (Only when FAX is installed)	Operation test/Check	FAX		Operation	
	5	Used to check the output operation of data signals in each data output mode of FAX. (Used to check the operation of MODEM.) An output is sent at the send level set by the soft switch. (Only when FAX is installed)	Operation test/Check	FAX		Operation	
	6	Used to print the confidential pass code. (Used when the confidential pass code is forgotten.) (Only when FAX is installed)	User data output/ Check (Display/Print)	FAX		Data	
	7	Used to print the image memory data (memory send/receive). (Only when FAX is installed)	User data output/ Check (Display/Print)	FAX		Data	
	8	Used to check the output operation of various sound signals of FAX. (Used to check the operation of the sound output IC.) Send level: Max. (Only when FAX is installed)	Operation test/Check	FAX		Operation	
	9	Used to check the output operation of various sound signals of FAX. (Used to check the operation of the sound output IC.) An output is sent at the send level set by the soft switch. (Only when FAX is installed)	Operation test/Check	FAX		Operation	
	10	Used to clear all data of the image memory (memory send/receive). The confidential data are also cleared at the same time. (Only when FAX is installed)	User data output/ Check (Display/Print)	FAX		Data	
	11	Used to check the output operation of FAX G3 mode 300bps. (Used to check the operation of MODEM.) Send level: Max. (Only when FAX is installed)	Operation test/Check	FAX		Operation	

Code		Function (Purpose)	Purpose	Section		Item	
Main	Sub						
66	12	Used to check the output operation of FAX G3 mode 300bps. (Used to check the operation of MODEM.) An output is send at the send level set by the soft switch. (Only when FAX is installed)	Operation test/Check	FAX		Operation	
	13	Used to enter (set) the number of FAX dial signal output test. (The dial number set by this simulation is outputted when the dial signal output test is made by SIM 66-14 - 16.) (Only when FAX is installed)	Setting			Data	
	14	Used to set the make time in the FAX pulse dial mode (10pps) and to test the dial signal output. (The dial number signal set by SIM 66-13 is outputted.) Used to check troubles in dialing and to check the operation. (Only when FAX is installed)	Setting/Operation test/ Check	FAX		Operation	
	15	Used to set the make time in the FAX pulse dial mode (20pps) and to test the dial signal output. (The dial number signal set by SIM 66-13 is outputted.) Used to check troubles in dialing and to check the operation. (Only when FAX is installed)	Setting/Operation test/ Check	FAX		Operation	
	16	Used to check the dial signal (DTMF) output in the FAX tone dial mode. (The dial number signal set by SIM 66-13 is outputted.) The send level can be set to an optional level. Used to check troubles in dialing and to check the operation. (Only when FAX is installed)	Setting/Operation test/ Check	FAX		Operation	
	17	Used to check the dial signal (DTMF) output in the FAX tone dial mode. Send level: Max. Used to check the operation. (Only when FAX is installed)	Setting	FAX		Operation	
	18	Used to check the dial signal (DTMF) output in the FAX tone dial mode. An output is sent at the send level set by the soft switch. Used to check the operation. (Only when FAX is installed)	Setting	FAX		Operation	
	19	Used to back-up the HDD data into the Flash memory (optional FAX expansion memory: AR-MM9). (Only when FAX is installed)	Data transfer	FAX		Data	
⚠	20	Used to read the back-up data by SIM 66-19 to the SRAM/HDD. (Only when FAX is installed)	Data transfer	FAX		Data	
	21	Used to print information related to FAX (various registrations, communication management, file management, system error protocol). (Only when FAX is installed)	Adjustment/Setup/ Operation data output/ Check (Display/Print)	FAX		Data	
	22	Used to adjust the handset volume. (Only when the FAX is installed.)	Setting	FAX		Operation	
	23	Used to download the FAX program. (Only when FAX is installed) Not used in the market. (For development)	Setting	FAX			
	24	Used to clear the FAST memory data. (Only when FAX is installed)	Clear	FAX		Data	

Code		Function (Purpose)	Purpose	Section		Item	
Main	Sub						
66	25	Used to register the FAX number for Modem dial-in. (Only when FAX is installed) Not used in the market. (For development)	Setting	FAX		Data	
	26	Used to register external telephone numbers for Modem dial-in. (Only when FAX is installed) Not used in the market. (For development)	Setting	FAX		Data	
	27	Used to register the transfer number for voice warp. (Only when FAX is installed) Not used in the market. (For development)	Setting	FAX		Data	
	28	Used to record voice messages. (Only when FAX is installed.)	Setting	FAX		Data	
	29	Used to clear data related to an address book (one-touch registration, program registration/ expansion, relay memory box registration, each table content).	Clear	FAX		Data	
	30	Used to check the change in the TEL/LIU status.	Operation test/Check	FAX		Operation	
	31	Used to check the relay operation.	Operation test/Check	FAX		Operation	
	32	Used to check the receive data (fixed data) from the line.	Operation test/Check	FAX		Operation	
	33	Used to check the signal (BUSY TONE/CNG/CED/FNET/DTMF) detection.	Operation test/Check	FAX		Operation	
	34	Used to measure the communication time of test image data.	Operation test/Check	FAX		Operation	
	35	Modem program reloading (Only when FAX is installed) Not used in the market. (For development)	Setting	FAX		Data	
	36	Used to check interface between MFPC controller and MDMC. (Check of the data line or the command line)	Operation test/Check	FAX		Operation	
	39	Used to set the destination specifications.	Setting	FAX		Specifications	Operation
	60	Used to set the ACR data.	Setting	FAX		Operation	
67	2	Used to check the operation of the parallel I/F of the printer. (This simulation is for production only, and requires a special tool for execution. Not used in the market.)	Operation test/Check	MFP controller		Operation	Interface/ Communicatio n
	11	Used to set YES/NO of the parallel I/ F select signal of the printer.	Setting	MFP controller		Operation	Interface/ Communicatio n
	16	Used to check the operation of the network card.	Operation test/Check	MFP controller		Operation	Interface/ Communicatio n

C. Details

1

1-1

Purpose	Operation test/Check
Function (Purpose)	Used to check the operations of the scanner (read) unit and its control circuit.
Section	Optical (Image scanning)
Item	Operation

Operation/Procedure

1) Select the operation mode with 10-key.

2) Press START key.

The scanner performs scanning at the speed corresponding to the operation mode.

1	HIGH SPEED	High speed (220mm/s)
2	LOW SPEED	Low speed (110mm/s)

```
SIMULATION 1-1
SCANNER CHECK. SELECT 1-2, AND PRESS START.
1. HIGH SPEED
2. LOW SPEED                              1
```

Press [START] key, and the operation is started. Press [CUSTOM SETTINGS] key, and scanning is stopped.

```
SIMULATION 1-1
SCANNER CHECK. EXECUTING.   .
1. HIGH SPEED
2. LOW SPEED                              1
```

1-2

Purpose	Operation test/Check
Function (Purpose)	Used to check the operation of sensor and detector in the scanning (read) section and the related circuit.
Section	Optical (Image scanning)
Item	Operation

Operation/Procedure

The sensor and detector operation conditions are displayed.

The active sensors and detectors are highlighted.

- The scanner (read) unit is in the home position.: "MHPS" section is highlighted.
- The scanner (read) unit is not in the home position.: "MHPS" is normally displayed.

MHPS	Optical system home position

3) Enter the copy magnification ratio with 10-key.
4) Press [START] key.

Set range	25 - 400%

NOTE: When [P] key is pressed after entering the adjustment value, the adjustment value is set. When [START] key is pressed instead, the adjustment value is set and copying is performed.
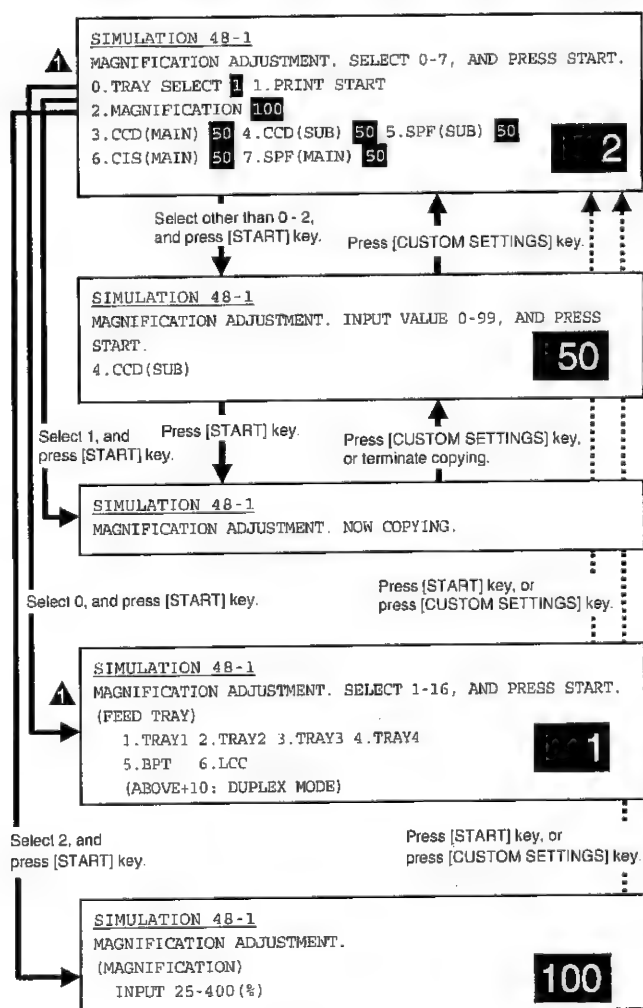

48-5	
Purpose	Adjustment
Function (Purpose)	Used to adjust the copy magnification ratio in the sub scanning direction.
Section	Optical (Image scanning)
Item	Picture quality

Operation/Procedure

When the sub scanning direction image magnification ratio adjustment with SIM 48-1 cannot provide a satisfactory result if a different magnification ration is set and a copy is made, perform this simulation.

When there is an error in the copy magnification ratio in reduction copy, change the adjustment value of the high speed mode. When there is an error in the copy magnification ratio in enlargement copy, change the adjustment value of the low speed mode.

1) Select the number corresponding to the adjustment mode with 10-key.
2) Press [START] key.
3) Enter the copy adjustment value with 10-key.

The scanner/SPF motor rotation sped adjustment value is entered.

	Item	Content	Set range	Default
0	MIR (220)	Mirror motor (220mm/sec)	0 - 99	50
1	MIR (110)	Mirror motor (110mm/sec)		
2	SPF (360)	SPF motor (360mm/sec)		
3	SPF (220)	SPF motor (220mm/sec)		
4	SPF (110)	SPF motor (110mm/sec)		

4) Press [START] key.

50-1	
Purpose	Adjustment
Function (Purpose)	Used to adjust the copy image position and the void area (image loss) adjustment on print paper in the copy mode. (The similar adjustment can be performed with SIM 50-5 and 50-2 (Simplified method).) (Document table mode)
Section	
Item	Picture quality Image position

Operation/Procedure

(Lead edge image loss/void area adjustment)

1) Set the lead edge image loss adjustment value (LEAD EDGE) and the paper lead edge void adjustment value (DENA) as follows.

(Standard set value) Lead edge image loss: 1.5mm (LEDA: 15)

Paper lead edge void: 3.5mm (DENA: 35)

* Set LEAD to 15. (Enter 15 as the adjustment value of LEAD, and press [P] key.) (0.1mm/step)

* Set DENA to 35. (Enter 35 as the adjustment value of DENA, and press [P] key.) (0.1mm/step)
2) Make a copy at the normal ratio (100%) and check the lead edge void area and the image loss. (Enter 100 as the set value of the copy magnification ratio (MAGNIFICATION), and press [START] key.)
3) If the adjustment result is not satisfactory, perform the following procedures.
   * If the lead edge void are is not 3.5mm:
     Change the adjustment value of RRCB and perform the adjustment. (Change the adjustment value of RRCB and press [START] key.) (1msec/step)
   * If the lead edge image loss is not 1.5mm:
     Change the adjustment value of RRCA and perform the adjustment. (Change the adjustment value of RRCA and press [START] key.)
     (Shift for the adjustment value change: 0.2mm/step)

(Rear edge void area adjustment)

Adjust so that the rear edge void area is 3.5mm. (Change the adjustment value of TRAIL EDGE, and press [START] key.)

(Front/rear frame direction image loss adjustment)

Set the adjustment value of SIDE to 20. (Enter 20 as the adjustment value of SIDE, and press [P] key.)

When the adjustment value is changed, the image position is shifted in the front/rear frame direction.

(Front/rear frame direction void area adjustment)

Adjust so that the total of the front/rear direction void areas is 7.0mm. (Change the adjustment values of FRONT/REAR, and press [START] key.)

Front frame void area = 3.5mm   Rear frame void area = 3.5mm

If, as shown above, the front and the rear void areas are not even, use SIM 50-5 to adjust the image off-center position.

* To set the magnification ratio, perform the following procedure.
1) Enter 2 with 10-key.
2) Press [START] key.
3) Enter the copy magnification ratio with 10-key.
4) Press [START] key.

Set range	25 - 400 (%)

Purpose	Adjustment
Function (Purpose)	Used to adjust the document scan position, the image print position, and the void area (image loss). (Simple adjustment) (This adjustment is the simple method of SIM 50-1.) (Document table mode)
Section	
Item	Picture quality Image position

Operation/Procedure

(Lead edge image loss/void area adjustment)

1) Set the RRGB value of SIM 50-1 to 80 - 99.

2) Set the lead edge image loss adjustment value (LEAD EDG) and the paper lead edge void adjustment value (DENA) to the values specified below.

(Standard set value) Lead edge image loss: 1.5mm
Paper lead edge void: 3.5mm (DENA: 35)

* Set the adjustment value of LEAD to 15. (Enter 15 as the adjustment value of LEAD and press [P] key.

* Set the adjustment value of DENA to 35. (Enter 35 as the adjustment value of DENA and press [P] key.)

3) Set the adjustment value of L1 to 0. (Enter 0 as the adjustment value of L1, and press [P] key.)

4) Set the adjustment value of L2 to 0. (Enter 0 as the adjustment value of L2, and press [P] key.)

5) Make a copy at 400%, and calculate the values of L1 and L2. (Enter 100 as the set value (MAGNIFICATION) of the copy magnification ratio, and press [START] key.) (Place a scale on the document table and make a copy.)

L1 = Distance (mm) from the image lead edge position to the scale position of 10mm x 10

L2 = Distance (mm) from the image lead edge position to the paper lead edge x 10

6) Enter the above values as the set values of L1 and L2. (Enter the adjustment values of L1 and L2, and press [P] key.)

If the adjustment result is not satisfactory, perform the above procedures again from the beginning, or use SIM 50-1 to adjust.

NOTE: If a satisfactory result is not obtained with the above procedures, through the adjustment values are changed individually, the normal adjustment cannot be made.

Perform procedures 3) to 6) continuously.

(Rear edge void area adjustment)

Adjust so that the rear edge void area is 3.5mm. (Change the adjustment value of TRAIL EDGE, and press [START] key.)

(Front/rear frame direction image loss adjustment)

Set the adjustment value of SIDE to 20. (Enter 20 as the adjustment value of SIDE, and press [P] key.)

When this adjustment value is changed, the image position is shifted in the front/rear frame direction.

(Front/rear frame direction void area adjustment)

Adjust so that the total of the front/rear direction void areas is 7.0mm. (Change the adjustment values of FRONT/REAR, and press [START] key.)

Front frame void area = 3.5mm   Rear frame void area = 3.5mm

If, as shown above, the front and the rear void areas are not even, use SIM 50-5 to adjust the image off-center position.

Purpose	Adjustment
Function (Purpose)	Used to adjust the print image position and the void area (image loss) on print paper. (Adjustment as the print engine) (This adjustment is reflected on all the FAX/printer/copy modes.)
Section	
Item	Picture quality

Operation/Procedure

(Print image off-center position adjustment)

1) Enter the number corresponding to the paper feed tray to be adjusted with 10-key. (Select one of 10 - 16.) (Table 1)
2) Press [START] key.
3) Enter the adjustment value with 10-key.
4) Press [P] key or [START] key. When [START] key is pressed, the adjustment value is set and printing is performed. (Table 2)
   Check the off-center of the self-print patter of print-out.
   (Shift for the adjustment value change: 0.1mm/step)

The greater the adjustment value is, the more the print image is shifted to the front.

(Lead edge void area adjustment)

1) Set the lead edge void adjustment value (DENA) as specified below.
   (Standard set value) Paper lead edge void: 3.5mm (DENA: 35)
   * Set the adjustment value of DENA to 35. Enter 35 as the adjustment value of DENA, and press [P] key.
2) Check the lead edge void area on the self print pattern.
   (Enter 1 and press [START] key.)

3) If the adjustment result is not satisfactory, perform the following procedures.
   * If the lead edge void area is not 3.5mm:
     Change the adjustment value of RRCB and perform the adjustment. (Change the adjustment value of RRCB and press [START] key.)
     (Shift for the adjustment value change: 0.1mm/step)

(Front/rear frame direction void area adjustment)

Adjust so that the total of the front/rear direction void areas is 7.0mm. (Change the adjustment values of FRONT/REAR, and press [START] key.)

Front frame void area = 3.5mm   Rear frame void area = 3.5mm

(Paper resist adjustment)

1) Enter the number corresponding to the paper feed tray to be adjusted with 10-key. (Select one of 3 - 9.) (Table 1)
2) Press [START] key.
3) Enter the adjustment value with 10-key.
4) Press [P] key or [START] key. When [START] key is pressed, the adjustment value is set and printing is performed. (Table 2)

If the relative positions of paper and print images vary or a paper jam occurs, change the adjustment value.

(Print condition setting in this simulation)

* To select paper (paper feed tray), perform the following procedures.

1) Enter 0 with 10-key.
2) Press [START] key. (The mode is changed to the paper feed tray selection mode.)
3) Enter the number corresponding to the paper feed tray to be used with 10-key. (Table 3)
4) Press [START] key. (The paper feed tray is selected.)

When the total of the above set value (1 - 6) and 10 is entered, the mode is changed to the duplex print mode.

NOTE: When [P] key is pressed after entering the adjustment value in this simulation, the adjustment value is set. When [START] key is pressed instead, the adjustment value is set and copying is performed.

Purpose	Adjustment
Function (Purpose)	Used to adjust the copy image position and void area (image loss) on print paper in the copy mode. (The similar adjustment can be performed with SIM 50-7 (simple method).) (SPF mode)
Section	
Item	Picture quality

Operation/Procedure

(Lead edge image loss adjustment) (Table 1)

1) Set the front and back surface image loss adjustment values (LEAD EDGE) as specified below:

   (Standard set value) Lead edge image loss: 1.5mm (LEAD: 1.5) Paper lead edge: 3.5mm (DENA: 35)

   * Set the adjustment value of LEAD to 15. (Enter 15 as the adjustment value of LEAD EDGE, and press [P] key.)

2) Make a duplex copy at 100% with the SPF, and check that the lead edge (image loss) is 1.5mm either on the front surface and the back surface. (Select the duplex mode in the paper selection mode of SIM 50-6.) (Table 3) (Enter 100 as the copy magnification ratio set value (MAGNIFICATION), and press [START] key.)

If the adjustment result is not satisfactory, perform the following procedures:

3) Change the adjustment values of SIDE1 and SIDE2, and perform the adjustment. (Change the adjustment values of SIDE1 and SIDE2, and press [START] key.)

   SIDE1: SPF front surface document lead edge scan position adjustment value

   SIDE2: SPF back surface document lead edge scan position adjustment value

   (Shift for the adjustment value change: 0.1mm/step)

   (The image scan start timing is determined with the detection timing of the document lead edge by the detector SPPD4.)

Repeat procedures 2) and 3) until a satisfactory result is obtained.

(Rear edge image loss adjustment)

1) Use the SPF at 100% to make a duplex copy, and check that the rear edge image loss is 1.5mm on the front and the back surfaces. (Select the duplex mode in the paper selection mode of SIM 50-6.) (Enter 100 as the copy magnification ratio set value (MAGNIFICATION), and press [START] key.)

If the adjustment value is not satisfactory, , perform the following procedure.

2) Change the adjustment value of TRAIL EDGE. Change the adjustment value of TRAIL EDGE, and press [START] key.

Repeat the above procedures until a satisfactory result is obtained.

(Front/rear frame direction image loss adjustment)

Set the adjustment value of the front surface and the back surface (FRONT/REAR) to 20. (Enter 20 as the adjustment value of FRONT/ REAR, and press [P] key.)

When the adjustment value is changed, the image position is shifted in the front/rear frame direction.

NOTE: When [P] key is pressed after entering the adjustment value, the adjustment value is set. When [START] key is pressed instead, the adjustment value is set and copying is performed. (Table 2)

(Copy condition setting in this simulation)

* To select paper (paper feed tray), perform the following procedures.

1) Enter 0 with 10-key.

2) Press [START] key. (The mode is changed to the paper feed tray selection mode.)

3) Enter the number corresponding to the paper feed tray to be used with 10-key. (Table 3)

4) Press [START] key. (The paper feed tray is selected.)

* To set the copy magnification ratio, perform the following procedure.

1) Enter 2 with 10-key.
2) Press [START] key.
3) Enter the copy magnification ratio with 10-key.
4) Press [START] key.

Purpose	Adjustment
Function (Purpose)	Used to adjust the copy image position and void area (image loss) on print paper in the copy mode. (The similar adjustment can be performed with SIM 50-6.) (SPF mode)
Section	
Item	Picture quality

Operation/Procedure

(Lead edge image loss adjustment)

1) Set the front and back surface image loss adjustment values (LEAD EDGE) as specified below:

   (Standard set value) Lead edge image loss: 1.5mm (LEAD: 1.5) Paper lead edge void: 3.5mm (DENA: 35)

   * Set the adjustment value of LEAD to 15. (Enter 15 as the adjustment value of LEAD EDGE, and press [P] key.)

2) Set the adjustment value of L4 to 0. (Enter 0 as the adjustment value of L4, and press [P] key.

3) Set the adjustment value of L5 to 0. (Enter 0 as the adjustment value of L5, and press [P] key.

4) Make a copy at 200% with the SPF, and calculate the values of L4 and L5. (Enter 200 as the set value of the copy magnification ratio set value (MAGNIFICATION) and press [START] key.)

   L4 = Distance (mm) from the image lead edge position to the scale of 10mm x 10

L5 = Distance (mm) from the image lead edge position to the paper lead edge x 10

5) Enter the above values as the set values of L4 and L5. (Enter the adjustment values of L4 and L5, and press [P] key.)

(The image scan start timing is determined with the detection timing of the document lead edge by the detector SPPD4.)

If the adjustment result is not satisfactory, perform the above procedures again or adjust with SIM 50-1.

NOTE: If the adjustment result of the above procedures is not satisfactory, though the adjustment value is changed individually, the adjustment cannot be completed normally.

Repeat procedures 2) - 6) until a satisfactory result is obtained.

(Rear edge image loss adjustment)

Adjust so that the rear edge image loss is 3.5mm. (Change the adjustment value of TRAIL EDGE, and press [START] key.)

(Front/rear frame direction image loss adjustment)

Set the adjustment value of SIDE to 20. (Enter 20 as the adjustment value of SIDE, and press [P] key.)

When the adjustment value is changed, the image position is shifted in the front/rear frame direction.

NOTE: When [P] key is pressed after entering the adjustment value, the adjustment value is set. When [START] key is pressed instead, the adjustment value is set and copying is performed. (Table 2)

(Copy condition setting in this simulation)

* To select paper (paper feed tray), perform the following procedures.

1) Enter 0 with 10-key.
2) Press [START] key. (The mode is changed to the paper feed tray selection mode.)
3) Enter the number corresponding to the paper feed tray to be used with 10-key. (Table 3)

64-1	
Purpose	Operation test/Check
Function (Purpose)	Used to check the operation of the printer section (self-print operation), (The print pattern, the paper feed mode, the print mode, the print quantity, and the density can be optionally set.)
Section	
Item	Operation

Operation/Procedure

(Various print patterns output) (Table 1)

1) Select PRINT PATTERN with 10-key.
2) Enter the number corresponding to the print pattern to be printed with 10-key.
3) Press [START] key.
4) Select PRINT START with 10-key.
5) Press [START] key.

(Print condition setting in this simulation)

* To select paper (paper feed tray), perform the following procedures.
1) Select TRAY SELECT with 10-key.
2) Press [START] key.
3) Enter the number corresponding to the paper feed tray of the target paper with 10-key.
4) Press [START] key. (The paper feed tray is selected.)

* To adjust the print density, perform the following procedures.
1) Select DENSITY with 10-key.
2) Enter the adjustment value with 10-key.
3) Press [START] key.

* To set the print quantity, perform the following procedures.
1) Select MULTI with 10-key.
2) Enter the print quantity with 10-key.
3) Press [START] key.

* To set the print quality mode, perform the following procedures.
1) Select MODE with 10-key.
2) Enter the number corresponding to the print quality mode with 10-key.
3) Press [START] key.

* To set the print level, perform the following procedures.
1) Select LEVEL with 10-key.
2) Enter the adjustment value with 10-key.
3) Press [START] key.

NOTE: In some print patterns, changing the level may not change the picture quality.

* To set duplex/simplex print, perform the following procedures.
1) Select DUPLEX with 10-key.
2) Enter the number corresponding to the operation mode with 10-key.
3) Press [START] key.

When "repeat" is selected and
[CUSTOM SETTINGS] key is pressed.

When Check is "once," the display stops at the result display. When
[CUSTOM SETTINGS] key is pressed, the display returns to the initial
display.

66-3	
Purpose	Operation test/Check
Function (Purpose)	Used to check the operation of the FAX PWB memory (read/write). (This adjustment is required when the PWB is replaced with a new one.)
Section	FAX
Item	Data

Operation/Procedure

1) Enter the number corresponding to the memory to be checked with 10-key.

2) Press [START] key.

In the case of All, all memories are checked only once.

Check connection wire list	
NO CHECK	Not checked yet.
CHECKING	Checking
OK	Check complete OK
NG	Check complete NG

The error address or the data line is displayed individually.

Target memory of check	
MFP SRAM	SRAM
MFP FLASH	FLASH ROM
MFP OP.FLASH	
MODEM EEPROM	
MODEM SRAM (G/A)	
MODEM SRAM	
MODEM SDRAM	

When "repeat" is selected, the operation is repeated until the result is
"NG" or [CUSTOMSETTING" is pressed.

66-4	
Purpose	Operation test/Check
Function (Purpose)	Used to check the output operation of data signals in each data output mode of FAX. (Used to check the operation of MODEM.) Send level: Max. (Only when FAX is installed)
Section	FAX
Item	Operation

Operation/Procedure

1) Enter the number corresponding to the output mode with 10-key.

2) Press [START] key.

The output is delivered at the max. send level.

```

[9] SELF DIAG MESSAGE AND TROUBLESHOOTING

[Error code]

1. General

When a trouble occurs in the machine or when the life of a consumable part is nearly expired or when the life is expired, the machine detects and displays it on the display section. This allows the user and the serviceman to take the suitable action. In case of a trouble, this feature notifies the occurrence of a trouble and stops the machine to minimize the damage.

2. Function and purpose

1) Securing safety. (The machine is stopped on detection of a trouble.)
2) The damage to the machine is minimized. (The machine is stopped on detection of a trouble.)
3) By displaying the trouble content, the trouble position can be quickly identified. (This allows to perform an accurate repair, improving the repair efficiency.)
4) Preliminary warning of running out of consumable parts allows to arrange for new parts in advance of running out. (This avoids stopping of the machine due to running out the a consumable part.)

3. Self diag message kinds

The self diag messages are classified as shown in the table below.

Class 1	User	Warning of troubles which can be recovered by the user. (Paper jam, consumable part life expiration, etc.)
	Service man	Warning of troubles which can be recovered only by a serviceman. (Motor trouble, maintenance, etc.)
	Other	—
Class 2	Warning	Warning to the user, not a machine trouble (Preliminary warning of life expiration of a consumable part, etc.)
	Trouble	Warning of a machine trouble. The machine is stopped.
	Other	—

4. Self diag operation

A. Self diag operation and related work flow

The machine always monitors its own state.

When the machine recognizes a trouble, it stops the operation and displays the trouble message.

A warning message is displayed when a consumable part life is nearly expired or is expired.

When a warning message is displayed, the machine may be or may not be stopped.

The trouble messages and the warning messages are displayed by the LCD.

Some trouble messages are automatically cleared when the trouble is repaired. Some other troubles must be cleared by a simulation.

Some warning messages of consumable parts are automatically cleared when the trouble is repaired. Some other warning messages must be cleared by a simulation.
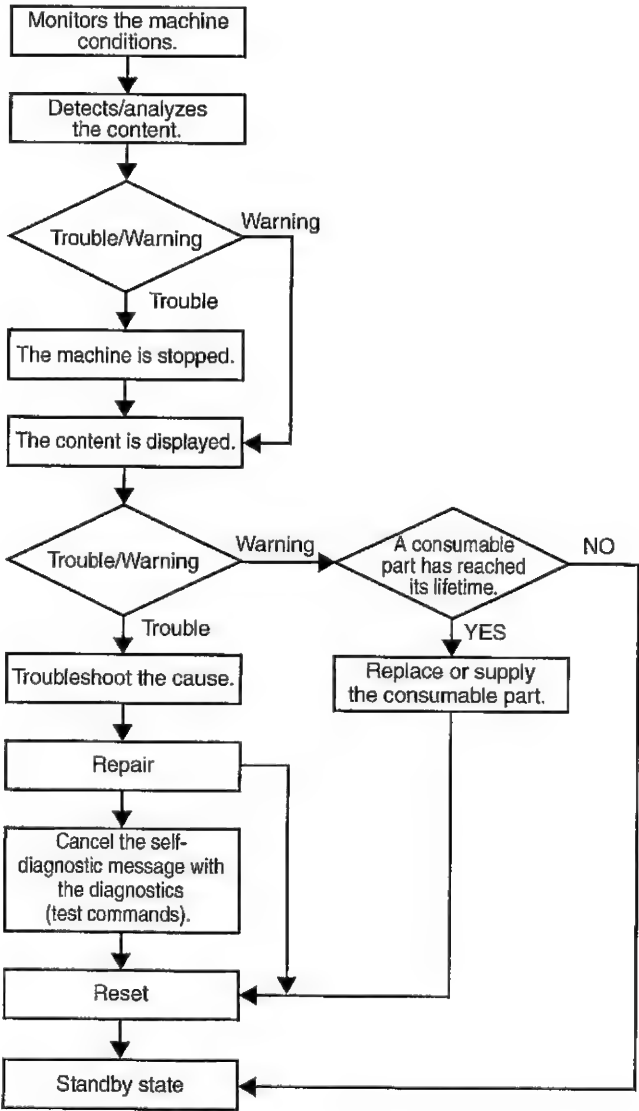

5. Breakdown sequence

A. Breakdown mode process

(1) Breakdown mode list

There are following cases of the breakdown mode.

(The machine can be operated under some conditions.)

(The machine can be operated under some conditions.)	Judgment block	Trouble code	Operation enable mode						
			Copy read (including interrupt)	FAX send	Email receive	FAX print	Print	List print	Notification to FASThost
(SPF breakdown)	Scanner	U5	△1	△1	△1	○	○	○	○
Scanner section breakdowns (Mirror motor, lens, copy lamp)	Scanner	L1, L3, U2 (80, 81)	×	×	×	○	○	○	○
FAX board breakdown	MFP control/ FAX	F6, F7	○	×	○	×	○	○	×
FAX power OFF	MFP control		○	×	○	×	○	○	×
Network error	MFP control	CE	○	○	×	○	○	○	×
Staple breakdown	PCU	F1 (10)	△2	○	○	△2	△2	△2	○
Paper feed tray breakdown	PCU	F3, U6 (LCC)	△3	○	○	△3	△3	△3	○
(Process control breakdown)	PCU	F2 (31, 32, 37)	△4	○	○	△4	△4	△4	○
PCU section breakdowns (Motor, fusing section, etc.)	PCU	C1, C2, C3, H2, H3, H4, H5, L4 (excluding L4-30), L8, U2 (90, 91), F2, F4	×	○	○	×	×	×	○
After-process breakdown	PCU	F1	△5	○	○	△5	△5	△5	○
Inserter trouble (excluding communication trouble)	PCU	F1 (61, 62)	△7	○	○	△7	△7	△7	○
Laser breakdown	PCU	E7 (02 only), L6	×	○	○	×	×	×	○
HDD breakdown	MFP control	E7 (03)	×	×	×	×	×	×	○
CCD breakdowns (Shading, etc.)	Scanner	E7 (10, 11, 12, 14)	×	×	×	○	○	○	○
CIS breakdowns (Shading, etc.)	Scanner	E6 (10, 11, 14)	△6	△6	△6	○	○	○	○
Scanner communication trouble	MFP control	E7 (80)	×	×	×	○	○	○	○
PCU communication trouble	MFP control	E7 (90)	×	×	×	×	×	×	○
FAX backup battery voltage fall	MFP control	U1 (01, 02)	○	×	×	○	○	○	○
HDD registration data sum error	MFP control	U2 (50)	○	×	×	○	○	○	○
Thermistor trouble (trouble history)	PCU	F2 (39, 46, 47, 48)	○	○	○	○	○	○	○

(The machine cannot be operated.)

Memory	MFP control	U2 (00, 11, 12, 22, 23)	×	×	×	×	×	×	○
External communication disable (RICA)	MFP control	U7, PF	×	×	×	×	×	×	○
Image memory trouble, decode error	MFP control	E7 (01, 06)	×	×	×	×	×	×	○
Incompatibility check error	MFP control/ PCU	E7 (50, 55, 56, 57, 60, 65, 66, 67)	×	×	×	×	×	×	×
Controller fan motor trouble	MFP control	L4-30	×	×	×	×	×	×	×

* For FAX communication, refer to the sheet of "Call request and Call-in."

* The machine may be operated under some conditions.

△1: When detected except when in a job, the machine can be operated in the OC mode.

△2: Can be operated except in the staple mode.

△3: When detected except in a job, the machine can be operated except with the breakdown tray.

△4: Can be operated with some restriction on the image quality depending on the destination. (Low density print) * Refer to the process control trouble operation table below.

△5: When detected except in a job, can be operated except in the trouble paper exit section.

△6: When detected except in a job, can be operated in the single surface scan mode.

△7: Can be operated except in the inserter tray, if the error is detected in the standby mode.

* Process control trouble operation table

Trouble code	Error content	Japan/SEC	Europe/ Others
F2-31	Process control sensor gain adjustment failure	Machine stop	Low density copy
F2-32	Mark detection failure	Low density copy	Low density copy
F2-37	Mark sensor gain adjustment failure	Machine stop	Low density copy

(2) Trouble mode process

The machine can be operated under some conditions.

Operations except for the trouble mode are enabled (READY). For the modes which cannot be operated, only setting is enabled and a message is given to show the operations are disabled. (NOT READY in this case)

(Display)

When a trouble occurs, a dialog is shown. In the mode where the operation is enabled, the OK button is added to the message. In the mode where the operation is disabled, the OK button is not shown and the display is kept until the trouble is canceled.

(3) Writing to the trouble memory

In case of a same trouble in this machine, selection is made with the simulation to write into the trouble memory or not. If this simulation is set, any trouble is written into the trouble memory unconditionally. (SIMULATION. 26-35)

0: A same trouble as the previous one is not written. (Default)

1: Any trouble is written into the trouble memory unconditionally.

B. Power ON trouble detection sequence.

* When the power is turned ON, if H3, H4, H5, U1, U2, PF, L4-31, F3-12/22, or U6 (LCC-related sub code 09 only) is saved, a trouble code is immediately displayed. E7 (50, 55, 56, 57, 60, 65, 66, 67) trouble is not saved.

(Power ON sequence)
• H3, H4, U1, U2, U6 PF trouble check

Trouble check is made in each block when initializing and data are sent to the ICU.
   H3, H4, H5, L4-31, F3-12/22: Saved in the PCU.
   U1: Saved in the ICU.
   U2: Saved in each block.
   PF: Saved in the ICU.
   U6-09: Saved in the PCU.

(Trouble cancel sequence)
• When executing SIM 13, 14, 15, 16, 17

SIM 13: U1 trouble cancel
SIM 14: H3, H4, H5, L4-31 trouble cancel
SIM 15: LCC (U6), Tray 1, 2 (F3-12, 22) ⚠
   F3-12/22 trouble cancel
SIM 16: U2 trouble cancel
SIM 17: PF trouble cancel

ICU event manager

Each block

When the power is turned on, check is made in each block.

Communication of trouble status
[Trouble data ID] [Trouble code]

sim task

(To the corresponding block)

Trouble cancel command

Trouble cancel status is communicated.

Trouble cancel
(The trouble memory is initialized.)
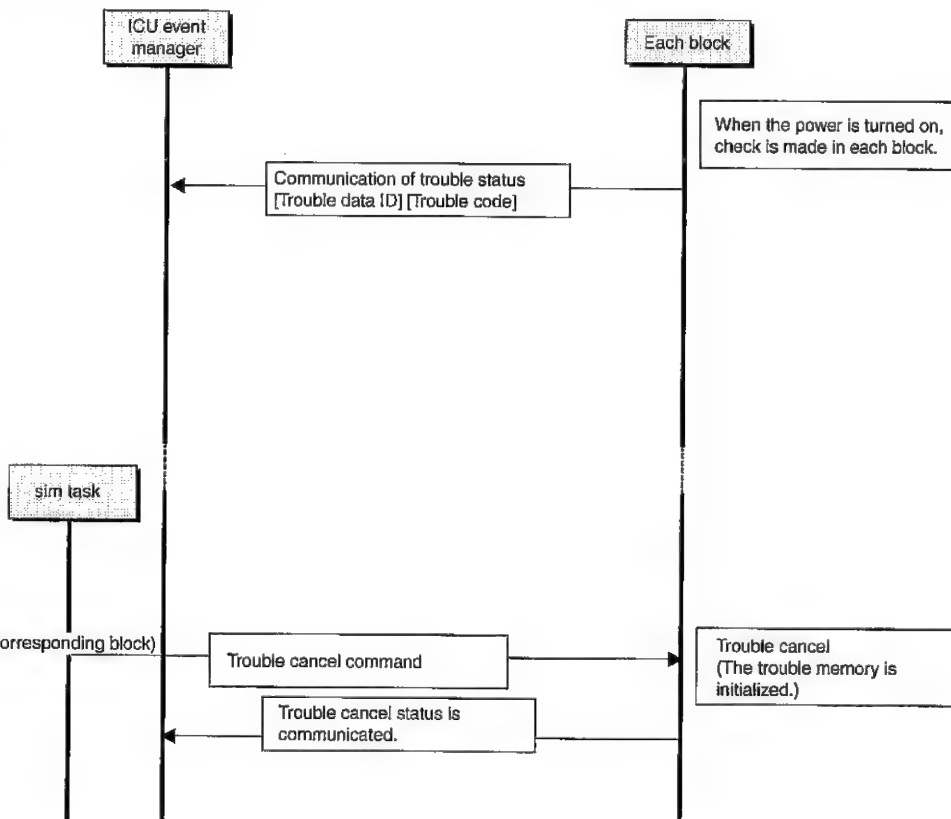

6. Communication in trouble

A. FAX call request/call-in specifications

Trouble	Send reservation	Print	Call request	Call-in	Precaution
PCU breakdowns (Incompatibility check error: E7 (50, 56, 57, 65, 66, 67))	○	×	○	Note	There is a risk that the memory is full.
F3, U6 (Paper feed tray breakdown)	○	Δ2	○	○	
F1 (Paper exit section breakdown)	○	Δ4	○	○	
Scanner breakdowns	×	○	○	○	
F6, F7 (FAX breakdown)	×	×	×	×	
E7 (01, 06) (MFP control breakdown)	×	×	×	×	
U2 (00, 11, 12, 22, 23, 50) (MFP control memory error)	×	×	×	×	
U7 (RIC external communication disable), PF	×	×	×	×	Inhibition of use by a customer having outstanding fee
U1 (Backup battery voltage fall)	×	Δ3	× Note	×	Transfer enable
E7 (50, 55, 56, 57, 60, 65, 66, 67) (Incompatibility check error)	×	×	×	×	
L4-30 (Controller fan motor trouble)	×	×	×	×	
Door open	○	×	○	○Note	There is a risk that the memory is full.
Toner empty	○	×	○	○Note	There is a risk that the memory is full.
Process cartridge uninstalled, etc.	○	×	○	○Note	There is a risk that the memory is full.
Paper empty	○	×	○	○Note	There is a risk that the memory is full.
Paper JAM	○	×	○	○Note	There is a risk that the memory is full.
Document JAM	×	○	○	○	
Simulation	×	×	×	×	
Key operation (Communication disable)	×	×	×	×	

Δ2: Enable except for the trouble tray

   * When, however, a paper feed tray trouble is detected during a job, the engine is stopped and printing is disabled.

Δ3: The display goes to the FAX status check menu and the list can be printed.: The received document is outputted.

Δ4: Paper exit is enabled except for the trouble paper exit tray

   * When, however, a paper feed tray trouble is detected during a job, the engine is stopped and printing is disabled.

			Remedy	Scanner PWB check
			Note	

Main code	Sub code	Title	System data trouble	
E7 – 01		Phenomenon	Display	Lamp
				Message
			Details	While reading/writing the HDD system area data, the HDD returns an error response or no response at all for longer than 30 seconds.
			Section	Controller
			Operation mode	
			Note	
		Case 1	Trouble position/Cause	No HDD is installed on the MFP control PWB.
			Remedy	Check installation status of the HDD on the MFP control PWB.
			Note	
		Case 2	Trouble position/Cause	HDD does not properly function.
			Remedy	• CHECK connection between the HDD and MFP control. • Perform an HDD read/write test using SIM 62-2/3. • Replace HDD.
			Note	
		Case 3	Trouble position/Cause	MFP control PWB abnormality
			Remedy	Replace the MFP control PWB.
			Note	

Main code	Sub code	Title	Laser trouble	
E7 – 02		Phenomenon	Display	Lamp
				Message
			Details	Laser trouble The BD signal from the LSU is kept OFF or ON. When the polygon motor rotation is started and three successive BDT signals of I/O ASIC are detected after forced lighting of laser.
			Section	Engine
			Operation mode	
			Note	
		Case 1	Trouble position/Cause	The connector to the LSU or the harness in the LSU is disconnected or broken.
			Remedy	Check for disconnection of the connector to the LSU.
			Note	
		Case 2	Trouble position/Cause	The polygon motor does not rotate properly.
			Remedy	Check that the polygon motor rotated properly or not.
			Note	
		Case 3	Trouble position/Cause	The position of the laser home position sensor in the LSU is shifted.
			Remedy	Use SIM 61-1 to check the LSU operation.
			Note	
		Case 4	Trouble position/Cause	A proper voltage is not supplied to the power line of the laser.
			Remedy	Replace the LSU unit.
			Note	
		Case 5	Trouble position/Cause	Defective lighting of the laser emitting diode
			Remedy	Check lighting of the laser emitting diode.
			Note	
		Case 6	Trouble position/Cause	PCU PWB abnormality
			Remedy	Replace the PCU PWB.
			Note	
		Case 7	Trouble position/Cause	MFP control ASIC PWB abnormality
			Remedy	Replace the MFP control PWB.
			Note	

HDD trouble

Main code	Sub code	Title	HDD trouble	
E7	03	Phenomenon	Display	Lamp
				Message
			Details	HDD trouble Data abnormality in the HDD file management area (cluster chain corrupted) The HDD sends an error response or does not respond for 30 sec.
			Section	Controller
			Operation mode	
			Note	
		Case 1	Trouble position/ Cause	The HDD is not installed properly to the MFP control PWB.
			Remedy	Check installation of the HDD to the MFP control PWB.
			Note	
		Case 2	Trouble position/ Cause	The HDD of the MFP control PWB does not operate properly.
			Remedy	Check connection of the harness to the HDD of the MFP control PWB. Use SIM 62-2, -3 to check read/write of the HDD. Replace the HDD.
			Note	
		Case 3	Trouble position/ Cause	MFP control ASIC PWB abnormality
			Remedy	Replace the MFP control PWB.
			Note	

Decode error trouble

Main code	Sub code	Title	Decode error trouble

				Message
			Details	Thermistor open (An input voltage of 2.95V or above is detected.) Fusing unit not installed
			Section	Engine
			Operation mode	
			Note	
		Case 1	Trouble position/ Cause	Thermistor trouble Control PWB trouble Improper connection of the fusing section connector AC power trouble Fusing unit not installed
			Remedy	Check the harness and the connector between the thermistor and the control PWB. Use SIM 14 to clear the self diag display.
			Note	

Main code	Sub code	Title	Fusing section high temperature trouble		
H3	00/ HL1	Phenomenon	Display	Lamp	
				Message	
	01/ HL2 02/ HL3		Details	Fusing section high temperature trouble The fusing temperature exceeds 241.5°C. (An input voltage of 0.35V or less is detected.) When fusing temperature control is started and a temperature of 242°C is detected 3 times continuously in sampling of 300 (450) msec interval. (Except for Japan)	
			Section	Engine	
			Operation mode		
			Note		
		Case 1	Trouble position/ Cause	Thermistor trouble Control PWB trouble Improper connection of the fusing section connector AC power trouble	
			Remedy	Use SIM 5-2 to check flashing of the heater lamp. When the lamp flashes normally. • Check the thermistor and the harness. • Check the thermistor input circuit on the control PWB. When the lamp keeps ON. • Check the AC PWB and the lamp control circuit on the control PWB. Use SIM 14 to cancel the trouble	
			Note		

Main code	Sub code	Title	Fusing section low temperature trouble		
H4	00/ HL1	Phenomenon	Display	Lamp	
				Message	
	01/ HL2 02/ HL3		Details	Fusing section low temperature trouble The set temperature is not reached within the specified time (normally 4 min) after turning on the power relay. The heater lamp does not turn off in 4 min after starting warming up. After completion of warming up, when the temperature below (*) is detected 5 times continuously during sampling in the interval of 300(450) msec (EX JAPAN): * H4-02/HL3: 80°C (Fixed level) This temperature is -50°C lower than the temperature control level of H4-00/HL1, H4-01/ HL2.	
			Section	Engine	
			Operation mode		
			Note		
		Case 1	Trouble position/ Cause	Thermistor trouble Heater lamp trouble Control PWB trouble Thermostat trouble AC power trouble Interlock switch	
			Remedy	Use SIM 5-2 to check flashing of the heater lamp. When the lamp flashes normally. • Check the thermistor and the harness. • Check the thermistor input circuit on the control PWB. When the lamp does not turn on. • Check for disconnection of the heater lamp or the thermostat. • Check the interlock switch. • Check the AC PWB and the lamp control circuit on the control PWB. Use SIM 14 to cancel the trouble	
			Note		

Main code	Sub code	Title	5-time continuous POD not-reached JAM detection	
H5	01	Phenomenon	Display	Lamp
				Message
			Details	5-time continuous POD not-reached JAM detection When POD1 not-reached jam is detected 5 times continuously. POD1 jam counter is backed up and used in a print job after turning on the power. The counter is cleared when POD1 jam does not occur in a job or when the trouble is canceled.
			Section	Engine
			Operation mode	
			Note	
		Case 1	Trouble position/ Cause	The fusing jam is not canceled completely. (Jam paper remains.)
			Remedy	Check for jam paper in the fusing section. (Winding, etc.)
		Case 2	Trouble position/ Cause	POD1 sensor trouble, or harness connection trouble
			Remedy	Check the PODC1 sensor harness and installation of the fusing unit.
		Case 3	Trouble position/ Cause	Fusing unit installation trouble
			Remedy	Use SIM 14 to cancel the trouble

			Remedy	Canceled by turning ON/ OFF the power. Check the connector and the harness in the communication line.
			Note	

[10] ROM VERSION-UP METHOD

1. General

A. Version-up target ROM's

The version-up target ROM's are listed in the table below.

The version-up procedures of the firmware of this machine is performed without disassembling the ROM from the machine. The new program files are collectively written into the ROM's. Some new programs can be written into an optional ROM.

If, however, the above procedure is failed by an accident such as power interruption during the version-up procedure, use the ROM copy socket on the MFP control PWB ROM to make version-up of each ROM individually.

[Kind of ROM]

Section	Name	Type	Capacity	Replaceable
PCU PWB	PCU ROM	Flash ROM	8Mbit	Replaceable
SCN PWB	SCN ROM	Flash ROM	8Mbit	Replaceable
MFP CONTROL PWB	BOOT ROM	Flash ROM	32Mbit	Replaceable
	MAIN ROM	Flash ROM	32Mbit	Replaceable
FAX MODEM CONTROL PWB	FAX ROM	Flash ROM	8Mbit	Replaceable
FINISHER CONTROL PWB	Finisher Control ROM	EPROM	—	Replaceable
FINISHER SS-CONTROL PWB	Finisher SS-Control ROM	EPROM	—	Replaceable
INSERTER CONTROL PWB	Inserter Control ROM	EPROM	—	Replaceable

* All the Flash ROM's can be rewritten. (LAN, Centro)

[Block diagram]
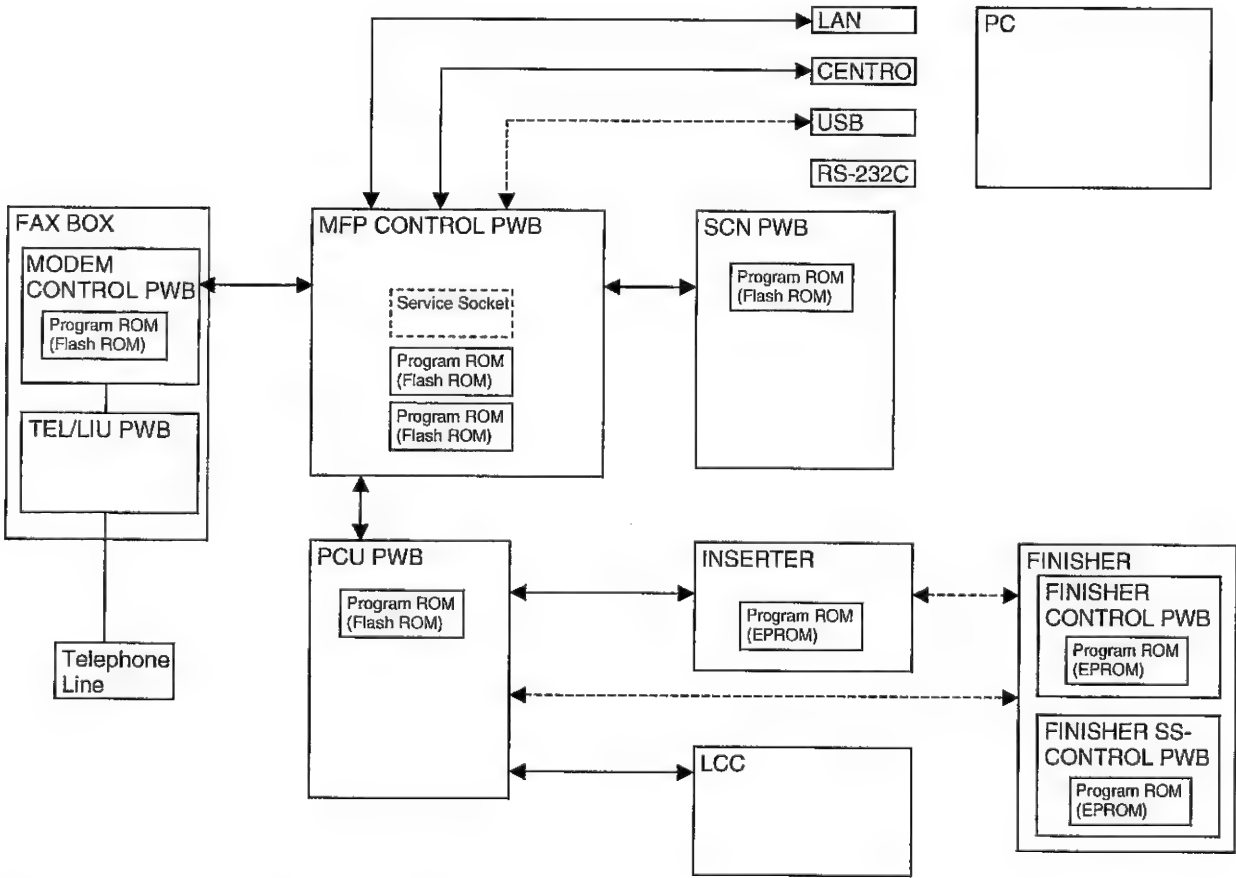

B. ROM version-up is required in the following cases:

ROM version-up is required in the following cases:

1) When improvement of performances is required.
2) When installing a new spare part ROM for repair to the machine.
3) When installing a new spare part PWB unit for repair with the ROM installed.
4) When there is a trouble in the ROM program and it must be repaired.

2. Precautions

A. Relationship between each ROM and version-up

When performing ROM version-up, be sure to check the combination with the version of ROM installed in the other PWB's including optional ones.

Some combinations of ROM versions may not operate the machine properly.

3. Necessary items for Flash ROM version-up

* A machine with ROM to be operated
* A spare PCU PWB ROM, an MFP control PWB ROM (Boot, Program), a scanner control PWB ROM (Each of which is provided with the program to allow operations.) (Used when writing the program files into the ROM is failed.)
* A PC operating on MS-DOS, with either of a USB, Ethernet, or parallel port.
* USB cable, Ethernet cable, or parallel I/F cable (for connection of PC and MFP control PWB)
* FCOPY.EXE file (Parallel I/F, file transfer tool)
* File2PRN.exe file (A file transfer tool for parallel, Ethernet, and USB protocols)
* Version-up program (compression) file

(The SFU file for writing a program to each ROM of the PCU PWB, the MFP control PWB (boot, program), and the scanner control PWB, or the SFU file for writing all the programs collectively.)

Front frame side   Rear frame side
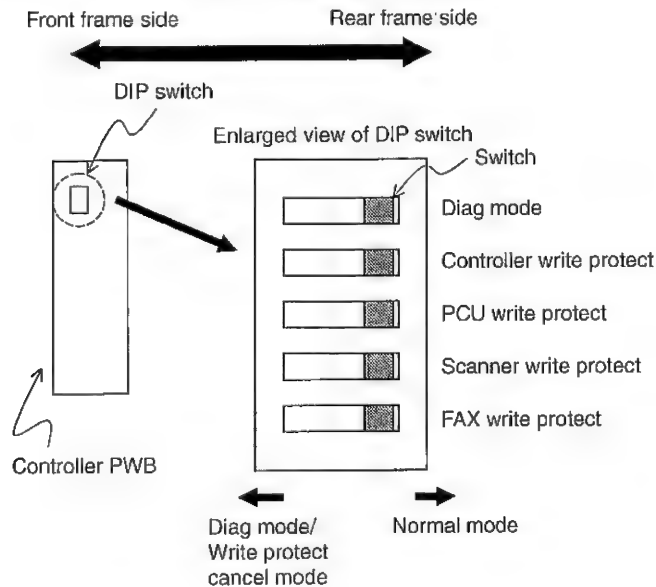

4. Flash ROM version-up method

A. MFP control PWB ROM DIP switch selection and Flash ROM slot

To make version-up of the ROM, the DIP set on the MFP control PWB on the side of the machine must be properly selected.

* When writing the program into each ROM (PCU, FAX, and scanner control PWB ROM) of each PWB individually by using an empty slot for ROM copy on the MFP control PWB ROM, the protect switch and the diag mode switch of the MFP control PWB ROM are switched over.

(MFP control PWB ROM slot)

The MFP control PWB ROM is provided with three Flash ROM slots: CN4, CN5, and CN6.

The boot ROM is installed to CN4, and the main ROM is installed to CN5. CN6 is an empty slot.

Us this empty slot of the MFP control PWB, CN6, to copy the ROM program.

* When writing the program files collectively without disassembling the ROM's from the PWB's, and when writing the program files into an optional ROM:

    The protect switch and the diag mode switch of the target PWB ROM of writing program files are switched.

B. Operation panel

B. Operation panel

When entering the diag mode to write into ROM, some keys on the operation panel and the LED panel are used. Necessary information including menu items and messages is displayed on the LCD panel.

[START] key is used as [OK] key, [DOCUMENT FILING] key and [FAX/IMAGE SEND] key as up/down select keys, [JOB STATUS] key as [MENU] key, and [CLEAR] key as [BACK] key.
(NOTE)
1) When performing version-up of the firmware by using the file transfer tool (File1PRN), the printer driver of the target model must be installed in advance.
2) When performing version-up of the firmware by using the USB I/F, take note of the following items.

    Since the port for the file transfer tool (File2PRN) differs from the port for the print mode, if the port for the print mode has been already made, be careful not to mistake them. If the USB port for the print mode has been made, it is advisable to delete it in order to avoid confusion.

(Making procedures of the port for the file transfer tool (File2PRN) in the USB I/F mode)

When performing version-up of the firmware by using the USB I/F, perform the following procedures to make the port in advance.

1) Install the printer driver of the target model.

    In this case, set the port to other than the USB mode.
2) Set the DIP switch to the Flash ROM version-up mode, and turn on the power.
3) Connect the PC and the main unit with a USB cable.
4) The PC detects the new hardware by Plug & Play function.
5) The driver of SHARP AR-M620N is automatically installed. (The model name is indicated as SHARP AR-M620N, regardless of the actual model name.)

C. Version-up procedure 1

When writing the program files collectively without disassembling the ROM's from the PWB's, and when writing the program files into an optional ROM:

Note: The PCU ROM, the FAX ROM, and the scanner control PWB ROM must be provided with the program to operate. An empty ROM cannot be used.

1) Set the DIP switch to the diag mode, and set the write protect DIP switch of the target ROM to CANCEL side.

   When writing the program data into all the ROM's collectively, set all the protect switches to CANCEL side.

2) Connect the PC and the MFP control PWB with a I/F cable.

3) Turn on the PC and the machine.

4) Copy the file transfer tool and ROM program file into the PC.

   (When writing with the file transfer tool fcopy.exe via parallel I/F)

   Copy the collective ROM programming file and fcopy.exe into the same folder of the PC. (When writing with the file transfer tool File2PRN.exe)

   Copy the collective ROM programming file and the file transfer tool File2PRN.exe into the folder you desire on the PC.

5) The following display is shown after a while from starting the machine.

```
Version Check
CONF: *********
```
6) Press MENU key several time to select an I/F to use from USB, Ethernet, and parallel protocols.

   (Example)

⚠
```
Firm Update
From USB
```
7) Press OK key to display the following menu.

```
Firm Update
Waiting Data
```
8) Transfer the program data from PC to the machine via either of USB, Ethernet, or parallel protocol.

8A) When transferring with the file transfer tool fcopy.exe via parallel I/F

   Boot MS-DOS from the PC. Use the FCOPY program to transfer the ROM program data from the PC to the main unit.

   (Procedure)

   Type in Fcopy followed by a file name of the ROM program data, then press Enter key.

   Fcopy xxx.sfu Enter
   　　　↑
   | ROM program data file |

8B) When transferring with the file transfer tool File2PRN.exe

   Start File2PRN.exe on the PC. Use this program to transfer the ROM program data from the PC to the main unit.

   (Procedure)

Start File2PRN.exe.
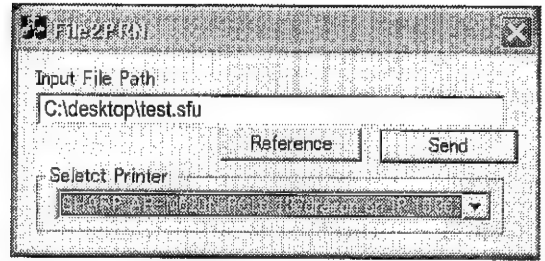

Click Reference button and select a ROM program to transfer.

Select the target machine's port form Select Printer pull down list.

Click Send button.

The LED blinks and the LCD displays appropriate information as operation proceeds.

Note: When version-up of each ROM of the scanner control PWB is performed, the backlight of the display is turned off. This does not mean a trouble. Wait for a while.

9) When "Result: OK" is displayed after a few minutes, press Up/Down keys to check that there is no display of "Result: NG."

Note: When writing the program file data collectively to the machine without the FAX unit installed, "Result : NG" is displayed only to the FAX. This can be neglected.

```
Firm Update    ***
Writing Data
```
↓
```
Firm Update
Waiting Data
```
↓
```
Firm Update    ***
Result: OK
```
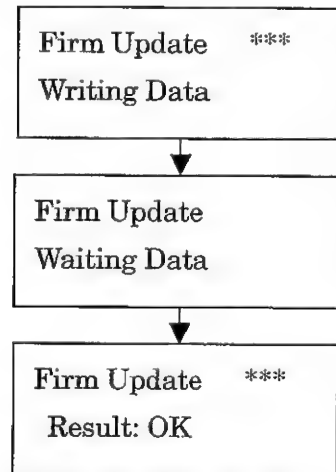

10) Turn off the machine, and set the DIP switch to the original position. (Normal start side)

11) Turn on the machine, and use SIM 22-5 to check that each ROM version is properly upgraded.

D. Version-up procedure 2

When writing the program into each ROM of the PCU PWB, the FAX PWB, and the scanner control PWB individually by using an empty slot for ROM copy on the MFP control PWB ROM:

Note: The program write target ROM installed to the empty slot for ROM copy on the MFP control PWB ROM may be empty. (No need to have the program data in it. The empty ROM can be used.)

1) Set the DIP switch to the diag mode, and set the write protect switch of the MFP control PWB ROM to CANCEL side.

2) Install the write target ROM to the empty slot for ROM copy on the MFP control PWB ROM.

3) Connect the PC and the MFP control PWB with a I/F cable.

4) Turn on the PC and the machine.

5) Copy the file transfer tool and ROM program file into the PC.

   (When writing with the file transfer tool fcopy.exe via parallel I/F)

   Copy the collective ROM programming file and fcopy.exe into the same folder of the PC. (When writing with the file transfer tool File2PRN.exe)

   Copy the collective ROM programming file and the file transfer tool File2PRN.exe into the folder you desire on the PC.

6) The following display is indicated after a while.

```
Version Check
CONF: *********
```

7) Press MENU key a few times to show the following display.

▲
```
CN Update
  From  USB
```

8) Press OK key to show the following display.

```
CN Update
  Waiting Data
```

9) Transfer the program data from PC to the machine via either of USB, Ethernet, or parallel protocol.

9A) When transferring with the file transfer tool fcopy.exe via parallel I/F

Boot MS-DOS from the PC. Use the FCOPY program to transfer the ROM program data from the PC to the main unit.

(Procedure)

Type in Fcopy followed by a file name of the ROM program data, then press Enter key.

Fcopy xxx.sfu Enter
　　　↑
　┌─────────────────┐
　│ ROM program data file │
　└─────────────────┘

9B) When transferring with the file transfer tool File2PRN.exe

Start File2PRN.exe on the PC. Use this program to transfer the ROM program data from the PC to the main unit.

(Procedure)

Start File2PRN.exe.
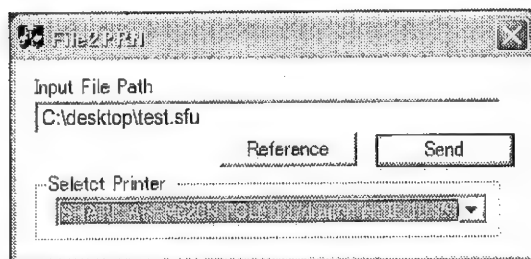

Click Reference button and select a ROM program to transfer.

Select the target machine's port form Select Printer pull down list.

Click Send button.

The LED blinks and the LCD displays appropriate information as operation proceeds.

10) The LED stops flashing in a few minutes, and "Writing: OK" is displayed.

```
CN Update
  Receiving Data
```
↓
```
CN Update      ***
  Writing Data
```

11) Press OK key, and the following display is shown.

```
CN Update ***-> CN5
  Writing   OK ?
```

12) "CN5" and the selection menu of slot numbers is displayed. Select "CN6" to which the target ROM is inserted to with Up/Down keys, and press OK key.

13) The LED flashes and the display is changed in the following sequence.

When "Result: OK" is displayed in a few minutes, press Up/Down keys to check that there is no display of "Result: NG."

```
CN Update ***-> CN5
  Writing   Data
```
↓
```
CN Update ***-> CN5
  Result : OK
```

14) Turn off the machine, and set the DIP switch to the original state (normal boot side).

15) Remove the ROM from the empty slot CN6 for ROM copy on the MFP control PWB ROM.

16) Install the ROM with the revised version to the PWB.

17) Turn on the machine, and use SIM 22-5 to check that the ROM version is normally upgraded.

(NOTE)

Precautions on transferring a ROM program data with the file transfer tool File2PRN

For successful transferring a ROM program data with the file transfer tool File2PRN, the following conditions should be met:

• When transferring a ROM program data with the file transfer tool File2PRN, the destination machine must be configured as a printer.

• The PC must have an appropriate printer driver installed and configured with an I/F port to use.

E. Countermeasures against "Result: NG"

Factors of "Result: NG"

The following cases may be factors of "Result: NG."

* The DIP switch for write protect is not set properly.

* The FAX cable is not connected. (NG for FAX)

* ROM defect (Very rare case)

5. Turning OFF the power during the version-up procedure

If the power is turned OFF during the version-up procedure, normal writing of data cannot be assured even though the machine can be booted again.

In such a case, use the spare PCU PWB ROM, the MFP control PWB ROM (boot, program), and the scanner control PWB ROM each of which includes the program to be operated, and perform the version-up procedure again.

Replace with the spare PCU, the controller boot, the scanner control PWB ROM, and perform procedure "4." for the replaced ROM again to write data into it.

6. Version-up procedure flowchart

②

NO ← Booted normally? → YES

Remove the Flash ROM and replace it with a spare.

Write the on-board files collectively. (4.)

YES ← Result: OK?

Update completed

NO

Write with the empty socket. (6.)

Result: OK? → YES

NO

Update completed

If the Flash ROM itself is defective, replace it with a new one and try again.

③

Write the on-board files collectively. (4.)

YES ← Result: OK?

Update completed

NO

If the Flash ROM itself is defective, replace it with a new one and try again.

<Reference> How to use Fcopy.exe program

When transferring ROM program files by using Fcopy.exe program, copy Fcopy.exe program and the ROM program files in the same folder and boot MS-DOS. Then, open the above folder on MS-DOS, and type "Fcopy file name"and transfer is performed. In the example below, the SFU file is placed in C:\ROM folder, and it is transferred.

		12	Belts		×	×	×	×	×	×	×	×	

(Note 1) Replacement reference: For replacement, refer to each paper feed counter value.

Paper feed tray 1 and 2	: 200K or 1 year
Manual paper feed/paper feed tray 3 and 4	: 100K or 1 year
SPF section	: 100K or 1 year
Torque limiter	: 800K (However, 400K for manual paper feed section)

(NOTE) Paper feed section roller life

Since each roller life is 100K or 200K, if a certain paper feed unit is intensively used, its life may be expired before the regular maintenance timing.

In actual, however, different sizes of paper are used with different paper feed trays. Therefore, it is quite rare to have to replace one of the rollers before the maintenance timing.

When a certain size of paper is used intensively, it is advisable to set two or more paper feed trays for that paper size as far as possible. This note should be explained to the user.

When servicing, be sure to check the use frequency of each paper feed tray, and replace a roller if necessary.

When cleaning rollers, it is advisable to use wet waste cloth to wipe and clean.

Since the paper feed trays 3 and 4 are used for larger sizes of paper than the paper feed trays 1 and 2, the life times of their rollers are shorter than those of the paper feed rollers 1 and 2.

The degree of wear of the paper pickup roller is greater than that of the paper feed roller, which greater than that of the separation roller.

(Paper pickup roller > paper feed roller > separation roller)

3. Maintenance and disassembly

A. Necessary execution items in maintenance and servicing

(1) Execution items before maintenance and servicing

Item	Simulation	
Check the developer counter value.	22	13
Check the OPC drum counter value.	22	13
Check the print count mode in each section and each operation mode.	22	1
Check the number of paper jam troubles.	22	2
Check the positions and contents of paper jams.	22	3
Check the positions and contents of paper jams (SPF section).	22	12
Check the contents of troubles.	22	4
Print the setting values and the adjustment values.	22	6
Check the number of use of the SPF, the scanner, the finisher, and inserter, the stapler, and the punch.	22	8
Check the number of use of each paper feed section.	22	9
Check the ROM version.	22	5

(2) Necessary execution items in maintenance and servicing

The necessary execution items in maintenance are shown below. (The items necessary to be executed are marked with "∗" in the table below.)

The following items must be executed regardless of maintenance or not. (∗).

(∗): When repairing and inspecting (without replacement of maintenance parts), installing, cleaning each section, etc.

No.	JOB No.	Work item	Simulation	When repairing (replacing consumable parts)/maintenance					When repairing (without replacement of consumable parts)/inspecting
				When installing	When replacing the OPC drum	When replacing developer	After cleaning the scanner (read) section	Periodic maintenance	
1	—	Toner concentration reference control level setting	25-2	∗		∗			
2	—	The photoconductor counter is cleared.	24-7		∗				
3	—	The photoconductor rotation counter is cleared.	24-11		∗				
4	ADJ9	Copy image quality adjustment (check)	46-2,9,10, 11,18,31	∗	∗	∗	∗	∗	
5	ADJ10	FAX mode print image quality adjustment (check)	46-12,13, 14,15,16,45	∗	∗	∗	∗	∗	
6	ADJ11	Scanner mode image quality adjustment (check)	46-21,22, 23,24,25,27	∗	∗	∗	∗	∗	

- The JOB No. indicates the title number of the adjustment item described in the chapter of the adjustments.

- Refer to the details based on this number according to necessity.

(3) Execution items after maintenance and servicing

Item	Simulation	
The paper jam/trouble data are cleared.	24	1
The use quantity counter of each paper feed section is cleared.	24	2
The numbers of use of the SPF, the scanner, the finisher, the inserter, the stapler, and the punch are cleared.	24	3
The maintenance counter is cleared.	24	4
The list of setting values and adjustment values is printed.	22	6

[12] OTHER

1. VARIOUS COUNTERS SPECIFICATIONS]

A. Count specification

(1) Paper exit system counter

Counter	Count-up timing	Simplex copy		Duplex copy				Counter reset procedure, clear
		Paper feed tray – Main unit paper exit		Paper feed tray – ADU		ADU – Main unit paper exit		
		Small size	Large size	Small size	Large size	Small size	Large size	
Total counter (Note)	When transfer is completed	1	2 (1)	1	2 (1)	1	2 (1)	—
Maintenance counter	When transfer is completed	1	2 (1)	1	2 (1)	1	2 (1)	Sim24-4
Developer counter	When transfer is completed	1	2 (1)	1	2 (1)	1	2 (1)	Sim24-5
All valid paper counter (Note)	When paper exit	1	2 (1)	—	—	2	4 (2)	—
Copy counter (Copy valid paper)	When paper exit	1	2 (1)	—	—	2	4 (2)	Sim24-6
FAX counter	When paper exit	1	2 (1)	—	—	2	4 (2)	Sim24-10
Print counter	When paper exit	1	2 (1)	—	—	2	4 (2)	Sim24-9
Internet FAX counter	When paper exit	1	2 (1)	—	—	2	4 (2)	Sim24-15
Document filing counter	When paper exit	1	2 (1)	—	—	2	4 (2)	Sim24-15
Right side paper exit counter	When center paper exit	1	2 (1)	—	—	2	4 (2)	—
Other counter (Self print, etc.)	When paper exit	1	2 (1)	—	—	2	4 (2)	Sim24-9

Large size: A3, 11 x 17. (Greater size than paper length 384mm)

* ( ): Count-up number when setting to the large size single count up.

(2) Document, finishing, paper feed system counter

Counter		Mode	Count event	Count-up condition	Counter reset procedure, clear
SPF counter		All modes	SPF paper feed number	Count is made when starting SPF paper pick.	Sim24-3
Finish stamp counter		FAX send Internet FAX send	Finish stamp use number	Count is made when stamp is ON.	Sim24-3
Staple counter		All modes (Including inserter stand alone process)	Staple number	Count is made when bundle exit process is completed. Double count is made when stapling two positions. In the inserter stand alone mode, count is made when process is completed.	Sim24-3
Punch counter		All modes (Including inserter stand alone process)	Punch number	Count is made when bundle exit process is completed. 1 count regardless of the kind of the punch unit (2-hole, 3-hole, etc.) In the inserter stand alone mode, count is made when process is completed.	Sim24-3
Saddle staple counter		All modes (Including inserter stand alone process)	Saddle staple number	Count is made when bundle paper exit process is c completed. Only one count is added. In the inserter stand alone mode, count is made when process is completed.	Sim24-3
Scan total counter		All modes	Scan number	Count is made when scan is completed.	Sim24-3
ADU counter		All modes	ADU paper feed number	Count is made when paper feed from the ADU section is started.	Sim24-2
Inserter counter		All modes (Including inserter offline process)	Inserter tray paper feed number	Count is made when paper feed from the inserter tray is started. In the inserter stand alone mode, count is made when process is completed.	Sim24-3
Paper feed counter	Manual paper feed tray	All modes	Tray paper feed number	Count is made when paper feed from each tray is started.	Sim24-2
	Paper feed tray 1				Sim24-2
	Paper feed tray 2				Sim24-2
	Paper feed tray 3				Sim24-2
	Paper feed tray 4				Sim24-2
	LCC				Sim24-2

(3) Send system counter

Counter	Mode	Count event	Count-up condition	Counter reset procedure, clear
Accumulated number of FAX send	G3 FAX send	Number of send	Except for the serial transmit operation, one reservation is counted as one communication. For the serial transmit operation, count is made for each communication individually. Recall is not included. Polling is counted as a number of send.	Sim24-10
Accumulated page number of FAX send	G3 FAX send	Total page number of send	In the serial transmit operation, each communication is counted as one individually. In bulletin board send, the page number of send is counted.	Sim24-10
Accumulated time of FAX send	G3 FAX send	Send time (Including resending time.)		Sim24-10
Accumulated page number of scanner scan	Scan to E-mail send SHARP DESK send FTP send	Page number of scan	Even in the serial transmit operation, the page number of one scan is counted. (The number of receivers is not counted.) In case of a send error (excluding document jam) • E-mail → Not counted. • SHARP DESK/FTP → Counted.	Sim24-15
Accumulated number of mail send	Scan to E-mail send	Number of mails reached to destination servers	Even in the serial transmit operation, the page number of one scan is counted. (The number of receivers is not counted.) Cancel and network error are not counted.	Sim24-15
Accumulated number of FTP send	SHARP DESK send FTP send	Number of send reached to destination servers	Mails transmitted by FTP send are counted in the accumulated number of mail send. Even in the serial transmit operation, the page number of one scan is counted. (The number of receivers is not counted.) Cancel and network error are also counted.	Sim24-15
Accumulated number of internet FAX send	Internet FAX send	Page number of send	Even in the serial transmit operation, the page number of one scan is counted. (The number of receivers is not counted.) The final send result is counted. A send error is counted. Resend is not counted. Cancel and CE error are not counted.	Sim24-15
Accumulated number of internet FAX receive	Internet FAX send	Page number of scan	Even in the serial transmit operation, the page number of one scan is counted. (The number of receivers is not counted.) The final send result is counted. A communication error (except for document jam) is counted. Cancel and CE error are not counted. A send (transfer, F code relay broadcast) without document scan is not counted.	Sim24-15
Scanner trial counter	Internet FAX send Scan to E-mail send SHARP DESK send FTP send	Page number of scan	Count is made for every scan of page. Count is made even when send is not completed. The operation is terminated when the count number exceeds 500.	—
Page number of Scan to HDD	When reading SCAN TO HDD	HDD storage page number		Sim24-15

(4) Receive system counter

Counter	Mode	Count event	Count-up condition	Counter reset procedure, clear
The accumulated page number of FAX receive print	G3 FAX receive	Total output page number	The FAX separator sheet is also counted. When polling, the number of received pages is counted. Count by size and count in recovery are the same as the copier specifications. (Counted by the print system.)	Sim24-10
Accumulated time of FAX receive	G3 FAX receive	Receive time		Sim24-10
Accumulated number of internet FAX receive	Internet FAX receive	Receive number	A normal mail receive is also counted. Count is made regardless of normal or abnormal. Count is made regardless of print result.	Sim24-15
Accumulated page number of internet FAX receive print	Internet FAX receive	Total receive output number	Count is made when output is made on a normal mail receive. Print of mail text is not counted. The FAX separator sheet is also counted. Count by size and count in recovery are the same as the copier specifications. (Counted by the print system.)	Sim24-15

(5) Department counter

Operation content	Data location				Conforming count mode (SIM 26-5)			Count-up condition
	MFP Control PWB	FAX	Scanner control PWB	PCU PWB	TOTAL	Mainte-nance	DV	
Copy counter	●				■			
Print counter	●				■			
FAX send page number counter	●				■			Department FAX send page number • In the serial transmit operation, each communication is counted as one individually.
Network scanner counter	●				—	—	—	Department network scanner scan page number • iFAX and network scanner • Even in the serial transmit operation, the page number of one scan is counted. (The number of receivers is not counted.)
I-FAX send page number counter	●				■			Department FAX send page number • In the serial transmit operation, each communication is counted as one individually.
Document filing	●				■			

(6) Printer job count-up specification

		1: Drum counter					●			■	Refer to the "Count Specifications." (Same as the maintenance counter.)
		2: Drum rotating time					●	—	—	—	Count for every second of rotation
		3: Toner counter					●			■	Refer to the "Count Specifications." (Same as the developer counter.)
		4: Toner supply time					●	—	—	—	Count for every second of rotation
		5: Developer counter					●			■	Refer to the "Count Specifications." (Same as the developer counter.)
		6: Developer rotating time					●	—	—	—	Count for every second of rotation
	19	Display of counters related to the network scanner									
		1: Network scanner document scan page number counter	32bit	●				—	—	—	Accumulated page number of scanner scan • The page number of normal completion of iFAX, E-mail, and FTP (DESK) send. • In sequential broadcast, count is made when one destination send is normally completed. • In case of a communication error: (Except for document jam) For iFAX and E-mail, send is canceled and no page is sent. Therefore count is not made. For FTP (DESK), though send is canceled, data reached in the server remains, and only the page number of send is counted. • Saved in the FAX-SRAM.
		2: Mail send counter	32bit	●				—	—	—	Accumulated number of mail send • The number of send mails of iFAX, E-mail, and FTP is counted. • Even in the serial system, one scan is counted. (The number of receivers is not counted.) • The number of mails reached to the server is counted. • Since server data are deleted in case of send cancel or a network error, count is not made. • Saved in the FAX-SRAM.
		3: FTP send counter	32bit	●				—	—	—	Accumulated number of FTP send • The page number of FTP (DESK) send is counted. • The FTP send mails are counted by the MAIL send counter. • Even in the serial transmit operation, the page number of one scan is counted. (The number of receivers is not counted.) • The number of mails reached to the server is counted. • In case of send cancel or a network error, the server data cannot be deleted. Therefore, count is made. • Saved in the FAX-SRAM.
		4: I-FAX original (Scan page number counter)	32bit	●				—	—	—	Accumulated page number of internet FAX scan • A communication error (except for document jam) is counted. • Cancel and CE error are not counted. • A send (transfer, F code relay broadcast) without document scan is not counted. • Saved in the FAX-SRAM.
		5: I-FAX send (Send counter)	32bit	●				—	—	—	Accumulated number of internet FAX send • A send error is counted. • Resend is not counted. • Cancel and CE error are not counted. • Saved in the 32bit counter and the FAX-SRAM.
		6: I-FAX receive (Receive counter)	32bit	●				■			Accumulated number of internet FAX send • A normal mail receive is also counted. • Saved in the 32bit counter and the FAX-SRAM.
		7: I-FAX output (Print page number counter)	32bit	●				—	—	—	Accumulated page number of internet FAX receive print Count by size and count in reprint after a jam are the same as the copier specifications.
		8: SCAN TO HDD (Save page number counter)	32bit	●				—	—	—	Page number of SCAN TO HDD save • The page number of documents saved to HDD is counted.

2. Web setting service mode

A. Outline

The Web setting service mode provides the following functions:

• Font/Form Download

• Device Cloning

These functions are used to backup the user data and the key operator program setting data, and to import backup data to another machine. By using these functions, two or more machines can be set in the same conditions in a short time.

• i-Fax Setup

This function is used to backup i-Fax receive data to the FTP server.

By using this function, receive data are backed up to the FTP server when they cannot be printed by some reasons (paper empty, toner empty, paper jam, etc.) and can be printed out after recovery of the machine.

After completion of printing the backup data, they are deleted from the FTP server.

B. Operating procedures

Entering the Web setting mode

1) Boot the browser software.

2) Enter "xxx.xxx.xxx.xxx(IP address)/xxxx_xxxxx.html" and press ENTER key.

3) Enter the user name and the password, and press OK button.

Note: The default user name and the default password are as follows:

    User name: service

    Password: shArp

The password can be optionally changed in the following procedures:

1) Enter "xxx.xxx.xxx.xxx(IP address)/password_setting.html" and press ENTER key.

2) Enter a new password.

3) Enter the new password again in the check column.

4) Press SUBMIT button.

## C. Details

(1) Font / Form Download

(Font download)

1) Press "xxx.xxx.xxx.xxx(IP address)/font_down.html" and press ENTER key.

2) Enter the user name and the password, and press OK button.
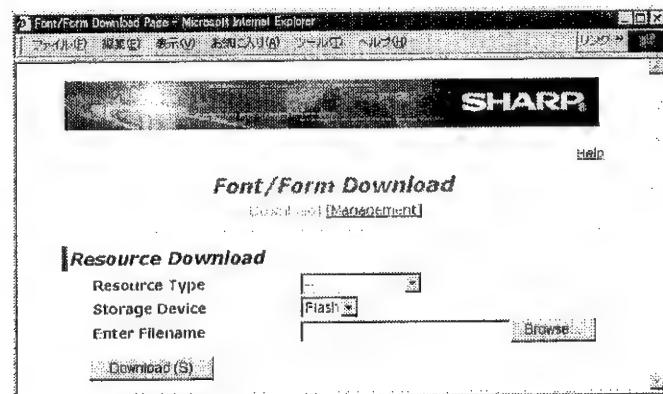

3) Select "Download" menu.

4) Select Resourced type.

5) Select Storage Device.

6) Select Font file.

7) Press "Download" button.

(Check or delete of downloaded font)

1) Press "xxx.xxx.xxx.xxx(IP address)/font_down.html" and press ENTER key.

2) Enter the user name and the password, and press OK button.

3) Select Management menu.

The list of downloaded fonts and the used percentage of the font area in the memory device are displayed.

Press "Initialize" button and press Yes key, and the downloaded fonts will be deleted.

(2) Device Cloning

(Backup)

1) Press "xxx.xxx.xxx.xxx(IP address)/device_cloning.html" and press ENTER key.

2) Enter the user name and the password, and press OK button.
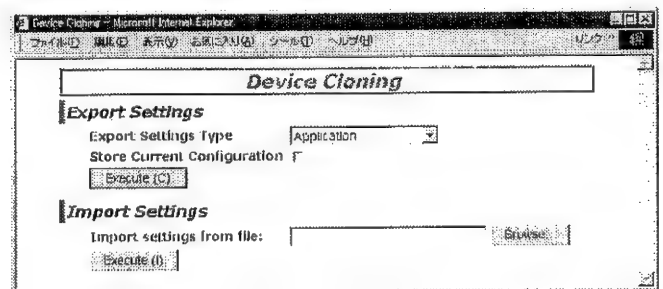

3) Select an item to be backed up. (Application / Key operator setting)

4) Press Execute key.

5) Press Save button. (File download mode)
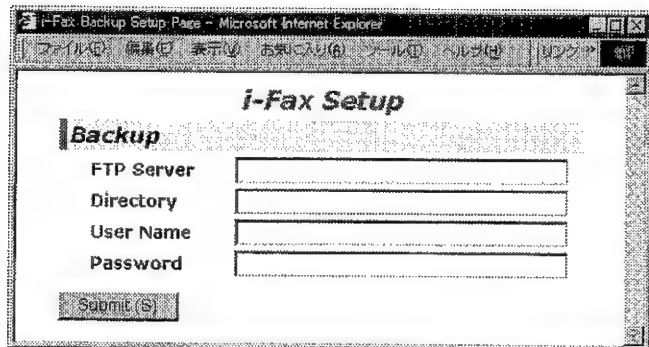

6) Select the destination of save.

7) Press Save button.

(Import)

1) Press "xxx.xxx.xxx.xxx(IP address)/device_cloning.html" and press ENTER key.
2) Enter the user name and the password, and press OK button.
3) Select the backed up file (xxxx.bin).
4) Press Execute key.

   The backed up data (setup data) are written into the machine.

(3) i-Fax Setup

1) Press "xxx.xxx.xxx.xxx(IP address)/ifax_ftp.html" and press ENTER key.
2) Enter the user name and the password, and press OK button.

3) Enter the FTP server address to which i-Fax receive data are backed up.
4) Enter the directory.
5) Enter the user name
6) Enter the password.
7) Press Submit button.
3. Paper jam code

A. Paper jam judgment conditions

JAM code	Content	JAM detection method		JAM judge time (JAMTST - JAMJD)	
		JAM detection timer start trigger (JAMTST)	JAM judge dedtector (JAMJD)	55/62 PPM MODEL (335mm/s)	70 PPM MODEL (395mm/s)
TRAY1	Tray 1 paper feed jam (PFD2 not-reached)	T1PFC ON	PFD2 ON	1608ms	1516ms
⚠					
PFD2_NM1	PFD2 not-reached jam (Tray 3 feed paper)	VPM ON (When the paper lead edge comes to 40mm in front of the transport roller 13, VPM turns ON.)	PFD2_NM1	541ms	480ms
PFD2_NM2	PFD2 not-reached jam (Tray 4 feed paper)	VPM ON (When the paper lead edge comes to 40mm in front of the transport roller 13, VPM turns ON.)	PFD2_NM2	541ms	480ms
PFD2_NAD	PFD2 not-reached jam (ADU re-feed paper)	APPD2 ON	PFD2_NAD	819ms	710ms

B. Inserter (AR-CF2) paper jam judgment conditions

JAM CODE	Name	JAM detection method		JAM judge distance
		JAM detection start trigger	JAM judge detector	
REG_SEN_N	Resist sensor not-reached JAM	Separation start	Resist sensor ON	(Distance from pick descending start to resist sensor ON) x 5
REG_SEN_S	Resist sensor remaining JAM	Transport start from the take-up position (*1)	Resist sensor OFF	Max. document length (WLT) - (Resist sensor OFF to take-up position) + 200mm
TIM_SEN_N	Timing sensor not-reached JAM	Resist sensor ON	Timing sensor ON	Distance from resist sensor ON to timing sensor ON + 200mm
TIM_SEN_S	Timing sensor remaining JAM	Resist sensor OFF	Timing sensor OFF	Distance from resist sensor OFF to timing sensor OFF + 200mm
HI_SEN_NI	Paper exit sensor not-reached JAM (Inserter paper feed)	Timing sensor ON	Paper exit sensor ON	Distance from timing sensor ON to paper exit sensor ON + 200mm
HI_SEN_NP	Paper exit sensor not-reached JAM (Main unit paper feed)	Main unit paper exit command receive	Paper exit sensor ON	Distance from main unit side to paper exit sensor ON + 500mm
HI_SEN_S	Paper exit sensor remaining JAM (Main unit paper feed)	After passing by 20mm from the paper exit sensor ON	Paper exit sensor OFF	Max. document length (WLT) + 200mm
	Paper exit sensor remaining JAM (Inserter paper feed)	Timing sensor OFF	Paper exit sensor OFF	Distance from timing sensor OFF to paper exit sensor OFF + 200mm
H_SEN_NIN	Reverse sensor not-reached JAM (When entering the reverse path)	Timing sensor ON	Reverse sensor ON	Distance from timing sensor ON to reverse sensor ON + 100mm
H_SEN_NOUT	Reverse sensor not-reached JAM (When exiting from the reverse path)	Switchback start	Reverse sensor ON	Distance from reverse stop position (*2) to reverse sensor ON + 100mm
H_SEN_SIN	Reverse sensor remaining JAM (When entering the reverse path)	Timing sensor OFF	Reverse sensor OFF	Distance from timing sensor OFF to reverse sensor OFF + 100mm
H_SEN_SOUT	Reverse sensor remaining JAM (When exiting from the reverse path)	After passing 20mm from the reverse sensor ON	Reverse sensor OFF	Max. Document length (WLT) + 100mm

*1) The take-up position is 30mm downstream from the vertical path transport roller.

*2) The reverse stop position is 20mm downstream from the reverse sensor.

C. Finisher (AR-F15/F16) paper jam judgment conditions

| JAM code	Content	JAM detection method		JAM judgment time (Stacker: LTR horizontal size Saddle: LTR vertical size)
		JAM detection timer start trigger	JAM judge detector	Common to 55/62, 70PPM MODELS (Main unit paper exit speed: Stacker: 800mm/s Saddle: 420mm/s)
FES_N	FINISHER entry port sensor not-reached JAM	Main unit paper exit command reception	The paper entry sensor is not turned ON within the specified time.	500ms
FES_S	FINISHER entry port remaining JAM	Paper entry sensor ON	The paper entry sensor is not turned OFF within the specified time.	540ms
	FINISHER buffer sensor not-reached JAM	Paper entry senor ON	The buffer sensor is not turned ON within the specified time.	688ms
	FINISHER buffer sensor remaining JAM	Buffer sensor ON	The buffer sensor is not turned OFF within the specified time.	540ms
	FINISHER paper exit sensor not-reached JAM	Entry port sensor ON	The paper exit sensor is not turned ON within the specified time.	Straight path transport: 453ms Buffer path transport: 815ms
	FINISHER paper exit sensor remaining JAM	Paper exit sensor ON	The paper exit sensor is not turned OFF within the specified time.	840ms
FFPS_N	FINISHER saddle transport path sensor not-reached JAM	Entry port sensor ON	The saddle transport path sensor is not turned ON within the specified time.	914ms
FFPS_S	FINISHER saddle transport path sensor remaining JAM	Saddle transport path sensor ON	The saddle transport path sensor is not turned OFF within the specified time.	996ms
	FINISHER saddle paper exit sensor not-reached JAM	Folding edge sensor ON (Completion of thrust operation)	The saddle transport sensor is not turned ON though paper is transported in the specified distance.	180mm (Twice as much as the normal distance)
	FINISHER saddle paper exit sensor remaining JAM	Saddle paper exit sensor ON	The saddle paper exit sensor is not turned OFF though paper is transported in the specified distance.	209.25mm (1.5 times as much as the normal distance)
FEXIT_S	FINISHER bundle exit remaining JAM	Start of bundle exit to the stack tray	The staple tray sensor is not turned OFF within the specified time.	1000ms
FSTPL	FINISHER Stacker staple JAM	Start of stacker stapling	When the staple HP sensor does not sense ON within the specified time from staple HP sensor OFF in stapling process, and when the staple HP sensor detects ON in reverse rotation after stopping the stapler.	500ms
	FINISHER saddle staple JAM	Start of saddle stapling	When the staple HP sensor does not sense ON within the specified time from stapler HP sensor OFF in stapling process, and when the staple HP sensor detects ON in reverse rotation after stopping the stapler.	500ms
FPNCH	FINISHER punch JAM	Punch HP OFF after starting punching	The punch HP sensor does not turn ON within the specified time.	200ms
FDOP	FINISHER door open JAM	One of finisher doors open	Finisher door open is detected in finishing process.	----

LEAD-FREE SOLDER

The PWB's of this model employs lead-free solder. The "LF" marks indicated on the PWB's and the Service Manual mean "Lead-Free" solder. The alphabet following the LF mark shows the kind of lead-free solder.

Example:

Lead-Free

Solder composition code (Refer to the table at the right.)

5mm

LFa

\<Solder composition code of lead-free solder\>
Solder composition	Solder composition code
Sn-Ag-Cu	a
Sn-Ag-Bi Sn-Ag-Bi-Cu	b
Sn-Zn-Bi	z
Sn-In-Ag-Bi	i
Sn-Cu-Ni	n
Sn-Ag-Sb	s
Bi-Sn-Ag-P Bi-Sn-Ag	p

(1) NOTE FOR THE USE OF LEAD-FREE SOLDER THREAD

When repairing a lead-free solder PWB, use lead-free solder thread.

Never use conventional lead solder thread, which may cause a breakdown or an accident.

Since the melting point of lead-free solder thread is about 40°C higher than that of conventional lead solder thread, the use of the exclusive-use soldering iron is recommendable.

(2) NOTE FOR SOLDERING WORK

Since the melting point of lead-free solder is about 220°C, which is about 40°C higher than that of conventional lead solder, and its soldering capacity is inferior to conventional one, it is apt to keep the soldering iron in contact with the PWB for longer time. This may cause land separation or may exceed the heat-resistive temperature of components. Use enough care to separate the soldering iron from the PWB when completion of soldering is confirmed.

Since lead-free solder includes a greater quantity of tin, the iron tip may corrode easily. Turn ON/OFF the soldering iron power frequently.

If different-kind solder remains on the soldering iron tip, it is melted together with lead-free solder. To avoid this, clean the soldering iron tip after completion of soldering work.

If the soldering iron tip is discolored black during soldering work, clean and file the tip with steel wool or a fine filer.

SHARP®
